

EVALPWD13F60

High-voltage evaluation board for the PWD13F60 full-bridge high density power driver

Data brief

Features

- Power system-in-package integrating gate drivers and high-voltage power MOSFETs:
 - Low $R_{DS(on)} = 320 \text{ m}\Omega$
 - BV_{DSS} = 600 V
- Suitable for operating as:
 - Full-bridge
 - Dual independent half-bridges
- Wide input supply voltage down to 6.5 V
- UVLO protection on supply voltage
- 3.3 V to 15 V compatible inputs with hysteresis and pull-down
- Interlocking function to prevent cross conduction
- Internal bootstrap diodes
- QFN (10x13 mm) package
- Very compact layout
- RoHS compliant

Applications

- Motor drivers for industrial and home appliances
- Factory automation
- Fans and pumps
- HID, ballasts
- Power supply units
- DC-DC and DC-AC converters

Description

The PWD13F60 is a high density power driver integrating gate drivers and four N-channel power MOSFETs in dual half-bridge configuration.

The integrated power MOSFETs have a low $R_{DS(on)}$ of 320 m Ω and 600 V drain-source breakdown voltage, while the embedded gate drivers high-side can be easily supplied by the integrated bootstrap diode. The high integration of the device allows loads in a tiny space to be driven efficiently.

The PWD13F60 accepts a supply voltage (V_{CC}) extending over a wide range and is protected by a low voltage UVLO detection on the supply voltage.

The input pin extended range allows easy interfacing with microcontrollers, DSP units or Hall effect sensors.

The EVALPWD13F60 is 48 x 53 mm wide, FR-4 PCB resulting in an $R_{th(J-A)}$ of 18 °C/W, capable to drive loads up to 2 A_{RMS} , without forced airflow cooling.

Both controlling and power signals are available on pin strip for easy connection to customer's board. Schematic diagram EVALPWD13F60
