

HCF4021

Datasheet - production data

The HCF4021 is a monolithic integrated circuit fabricated in metal oxide semiconductor technology available in PDIP-16 and SO-16

This device is an 8-stage parallel or serial-

input/serial-output register having common clock and parallel/serial control inputs, a single serial

data input, and individual parallel "jam" inputs to

each register stage. Each register stage is a D-

type, master-slave flip-flop in addition to an output

from stage 8. "Q" outputs are also available from

stages 6 and 7. Serial entry is synchronous with the clock but parallel entry is asynchronous.

parallel/serial control input is low, data are serially
