

Asynchronous parallel input or synchronous serial-in/serial-out 8-stage static shift register

Datasheet - production data

Features

- Medium speed operation: 12 MHz (typ.) clock rate at V_{DD} - V_{SS} = 10 V
- Fully static operation
- 8 master-slave flip-flops plus output buffering and control gating
- Quiescent current specified up to 20 V
- 5 V, 10 V, and 15 V parametric ratings
- Input leakage current I_I = 100 nA (max.) at V_{DD} = 18 V, T_A = 25 °C
- 100% tested for quiescent current
- ESD performance

CDM: 1 kVHBM: 2 kVMM: 200 V

Applications

- Automotive
- Industrial
- Computer
- Consumer

Description

The HCF4021 is a monolithic integrated circuit fabricated in metal oxide semiconductor technology available in PDIP-16 and SO-16 packages.

This device is an 8-stage parallel or serial-input/serial-output register having common clock and parallel/serial control inputs, a single serial data input, and individual parallel "jam" inputs to each register stage. Each register stage is a D-type, master-slave flip-flop in addition to an output from stage 8. "Q" outputs are also available from stages 6 and 7. Serial entry is synchronous with the clock but parallel entry is asynchronous.

In this device, entry is controlled by the parallel/serial control input. When the parallel/serial control input is low, data are serially shifted into the 8-stage register synchronously with the positive transition of the clock line. When the parallel/serial control input is high, data are jammed into the 8-stage register via the parallel input lines and synchronous with the positive transition of the clock line. The clock input of the internal stage is "forced" when asynchronous parallel entry is made. Register expansion using multiple packages is permitted.

Table 1. Device summary

Order code	Temperature range	Package	Packing	Marking
HCF4021M013TR	-55 ° C to +125 ° C	SO-16		HCF4021
HCF4021YM013TR ⁽¹⁾	-40 ° C to +125 ° C	SO-16 (automotive grade) ⁽¹⁾	Tape & reel	HCF4021Y
HCF4021BEY	-55 ° C to +125 ° C	PDIP-16	Tube	HCF4021BE

Qualification and characterization according to AEC Q100 and Q003 or equivalent, advanced screening according to AEC Q001 & Q002 or equivalent.

3 Electrical characteristics

Absolute maximum ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. All voltage values are referred to $V_{\rm SS}$ pin voltage.

Table 4. Absolute maximum ratings (AMR)

Symbol	Parameter	Value	Unit
V_{DD}	Supply voltage	-0.5 to +22	V
V _I	DC input voltage	-0.5 to V _{DD} + 0.5	, v
I _I	DC input current	±10	mA
D	Power dissipation per package	ge 200	
P_{D}	Power dissipation per output transistor	100	mW
T _{op}	Operating temperature	-55 to +125	°C
T _{stg}	Storage temperature	-65 to +150
