

### 4-line high speed ESD protection with ultra-low clamping voltage

### μQFN 1.9x1 10L

#### Product status link

HSP054-4N10

#### **Features**

- Flow-through routing to keep signal integrity
- · Unidirectional protection
- Ultra large bandwidth: 12 GHz (I/O2 to GND)
- Ultra-low capacitance: 0.30 pF
- Ultra-low clamping voltage: 9 V at 16 A TLP
- Extended operating junction temperature range: -40 °C to 150 °C
- RoHS compliant
- Exceeds IEC 61000-4-2 level 4:
  - ±15 kV (contact discharge)
  - ±30 kV (air discharge)

### **Applications**

- USB 3.1 up to 10 Gbps
- USB 3.2 up to 10 Gbps
- Ethernet 1000 BASE-T
- · Ethernet 10 G BASE-T
- DisplayPort
- LVDS

### **Description**

The HSP054-4N10 is a 4 channel ESD array with a rail to rail architecture.

The HSP054-4N10 is designed to protect most sensitive, submicron technology circuits, thanks to its very low clamping voltage < 9 V under a 8 KV ESD surge.

HSP054-4N10 high protection level is achieved with no compromise on high speed lines signal integrity, thanks to ST new extra low capacitance technology.

The device is packaged in µQFN 1.9 mm x 1 mm with a 400 µm pitch.

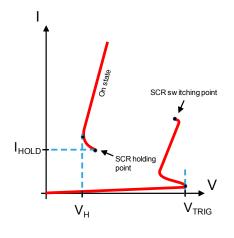

### 1 Characteristics

Table 1. Absolute maximum ratings (T<sub>amb</sub> = 25 °C)

Symbol	Parameter		Value	Unit
		IEC 61000-4-2:		
V <sub>PP</sub>	Peak pulse voltage	Contact discharge	15	kV
		Air discharge	30	
Ірр	Peak pulse current (8/20 µs), IEC 61000-4-5		3	Α
T <sub>stg</sub>	Storage temperature range		-55 to +150	
T <sub>j</sub>	Operating junction temperature range		-40 to +150	°C
TL	Maximum lead temperature for soldering during 10 s		260	

Figure 1. Electrical characteristics - parameters definition

Symbol Parameter = Stand-off voltage  $V_{RM}$ Leakage current @ V<sub>RM</sub>  $I_{RM}$  $V_{\text{TRIG}}$ Trigger voltage  $\mathsf{V}_\mathsf{H}$ Minimum voltage when the protection is triggered  $V_{CL}$ Clamping voltage = Peak pulse current l<sub>PP</sub>  $R_D$ = Dynamic resistance = Input capacitance per line  $C_{\text{\tiny LINE}}$ 

DS13173 - Rev 1 page 2/11

Table 2. Electrical characteristics (T<sub>amb</sub> = 25 °C)

Symbol	Parameter	Test conditions		Min.	Тур.	Max.	Unit
$V_{TRIG}$	Higher voltage than V <sub>TRIG</sub> guarantees the protection turn-on		-	8.5	10	V	
V <sub>H</sub>	Lower voltage than VH guarantees the protection turn-off			-	1.8		V
I <sub>HOLD</sub>	Lower current than IHOLD guarantees the	protection turn-off		-	40		mA
$V_{RM}$	Reverse working voltage			-		5	V
I <sub>RM</sub>	Leakage current	V <sub>RM</sub> = 5 V		-	5	100	nA
V <sub>CL</sub> Clamping voltage		8 µs/20 µs wave form I <sub>PP</sub> = 3 A	I/O to GND	-	3.8		V
	Clamping voltage		GND to I/O	-	4.8		
		8 kV contact discharge after 30 ns, IEC 61000-4-2	I/O to GND	-	9		
			GND to I/O	-	9		
		TLP measurement	I/O to GND	-	8		
		I <sub>PP</sub> = 16 A	GND to I/O	-	9		
R <sub>d</sub>	Dynamic resistance, TLP measurement	I/O to GND GND to I/O		-	0.40		Ω
ιζα	(pulse duration 100 ns)			-	0.55		1 12
C <sub>I/O - I/O</sub>	Line capacitance $V_{I/O} = 0 \text{ V}$ $V_{OSC} = 30 \text{ mV}$	F = 200 MHz		-	0.25		<b></b> F
	Line capacitance	F = 200 MHz		-	0.45	0.70	pF
	$V_{I/O} = 0 \text{ V}$ $V_{OSC} = 30 \text{ mV}$ $F = 3 \text{ GHZ}$			-	0.30	40	
f <sub>C</sub>	Differential mode cut-off frequency at - 3dB			-	10		GHz

# 2 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: www.st.com. ECOPACK is an ST trademark.

### 3 Recommendation on PCB assembly

#### 3.1 Solder paste

- 1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
- 2. "No clean" solder paste is recommended.
- 3. Offers a high tack force to resist component movement during high speed.
- 4. Solder paste with fine particles: powder particle size is 20-38 μm.

#### 3.2 Placement

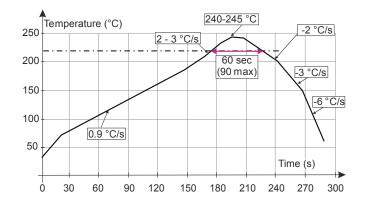

- 1. Manual positioning is not recommended.
- 2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
- 3. Standard tolerance of ±0.05 mm is recommended.
- 4. 1.0 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
- 5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
- For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

### 3.3 PCB design preference

- 1. To control the solder paste amount, the closed via is recommended instead of open vias.
- 2. The position of tracks and open vias in the solder area should be well balanced. A symmetrical layout is recommended, to avoid any tilt phenomena caused by asymmetrical solder paste due to solder flow away.

#### 3.4 Reflow profile

Figure 14. ST ECOPACK® recommended soldering reflow profile for PCB mounting

Note: Minimize air convection currents in the reflow oven to avoid component movement.

Note: Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.
