## Low drop dual power operational amplifiers

## Features

- Output current up to 1 A
- Operates at low voltages
- Single or split supply
- Large common-mode and differential-mode range
- Low input-offset voltage
- Ground compatible inputs
- Low saturation voltage
- Thermal shutdown
- Clamp diode

## Description

The L2720W is a monolithic integrated circuit in SO16 (Wide) package, intended for use as a power operational amplifier in a wide range of applications including servo amplifiers and power supplies.
It is particularly suitable for driving coils, inductive loads and for use in motors.

The high gain and high output power capability provide superior performance whenever an operational amplifier/power booster combination is required.
