

## Automotive 5 V low drop voltage regulator

Datasheet - production data

- Programmable reset pulse delay with external capacitor
- Early warning
- Very wide stability range with low value output capacitor
- Thermal shutdown and short circuit protection
- Wide temperature range ( $T_j = -40\text{ }^\circ\text{C}$  to  $150\text{ }^\circ\text{C}$ )
- Enable input for enabling / disabling the voltage regulator

### Features

Max DC supply voltage	$V_S$	40 V
Max output voltage tolerance	$\Delta V_0$	+/-2%
Max dropout voltage	$V_{dp}$	500 mV
Output current	$I_O$	300 mA
Quiescent current	$I_{qn}$	5 $\mu\text{A}^{(1)}$ 55 $\mu\text{A}^{(2)}$

1. Typical value with regulator disabled.
2. Typical value with regulator enabled.

- AEC-Q100 qualified 
- Operating DC supply voltage range
- 5.6 V to 40 V
- Low dropout voltage
- 300 mA current capability
- Low quiescent current
- Very low consumption mode
- Precision output voltage 5 V +/- 2%
- Reset circuit sensing the output voltage

### Description

L5300GJ is a low dropout linear regulator with microprocessor control functions such as power on reset, low voltage reset, early warning, ON/OFF control. Typical quiescent current is 55  $\mu\text{A}$  in very low output current mode and enabled regulator. It drops to 5  $\mu\text{A}$  with not enabled regulator.

On-chip trimming results in high output voltage accuracy (2%). Accuracy is kept over wide temperature range, line and load variation. Early warning circuit monitors the input voltage and compares it with an internal voltage reference.

The maximum input voltage is 40 V. The maximum output current is internally limited.

Internal temperature protection disables the voltage regulator output. In addition, only low value ceramic capacitor on output is required for stability (equal or above 220 nF).

# 1 Block diagram and pins description

Figure 1. Block diagram

Figure 2. Configuration diagram (top view)

Table 2. Pins description

N°	Name	Function
1	NC	Not connected
2	R <sub>es</sub>	Reset output. Internally connected to V <sub>o</sub> through a 20 KΩ pull up resistor. This pin is pulled low when V <sub>o</sub> < V <sub>o_th</sub> . Keep open if not needed
3	V <sub>cr</sub>	Reset delay. Connect an external capacitor between V <sub>cr</sub> pin and ground to adjust the reset delay time. Keep open if not needed
4	GND	Ground reference
5	V <sub>os</sub>	Regulator output voltage sensing (connect to V <sub>o</sub> )
6	V <sub>o</sub>	5 V regulated output. Block to GND with a ceramic capacitor (C <sub>o</sub> ≥ 220 nF for regulator stability)
7	V <sub>S</sub>	Supply voltage, block directly to GND on the IC with a capacitor
8	NC	Not connected
9	E <sub>n</sub>	Enable input. A high signal switches the regulator ON. Connect to V <sub>S</sub> if not needed
10	EW <sub>i</sub>	Early warning input. This pin monitors the V <sub>S</sub> voltage level through a resistor divider. Connect to V <sub>S</sub> if not needed
11	NC	Not connected
12	EW <sub>o</sub>	Early warning output. Internally connected to V <sub>o</sub> through 20 KΩ pull up resistor. This pin is pulled low when EW <sub>i</sub> is below bandgap reference voltage. Keep open if not needed
-	TAB	TAB is connected to the substrate of the chip: connect to GND or leave open (see <a href="#">Figure 2</a> ).

## 2 Electrical specifications

### 2.1 Absolute maximum ratings

Stressing the device above the rating listed in the [Table 3: Absolute maximum ratings](#) may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**Table 3. Absolute maximum ratings**

Symbol	Parameter	Value	Unit
$V_{sdc}$	DC supply voltage	-0.3 to 40	V
$I_{Vsdc}$	Input current	Internally limited	
$V_{odc}$	DC output voltage	-0.3 to 6	V
$I_{Vodc}$	DC output current	Internally limited	
$V_{od Res}$	Open drain output voltage $R_{es}$	-0.3 to $V_{odc} + 0.3$	V
$I_{od Res}$	Open drain output current $R_{es}$	Internally limited	
$V_{od EWo}$	Open drain output voltage $EW_o$	-0.3 to $V_{odc} + 0.3$	V
$I_{od EWo}$	Open drain output current $EW_o$	Internally limited	
$V_{cr}$	$V_{cr}$ voltage	-0.3 to $V_o + 0.3$	V
$V_{EWi}$	Early warning input voltage	-0.3 to 40	V
$V_{En}$	Enable input	-0.3 to 40	V
$T_j$	Junction temperature	-40 to 150	°C
$V_{ESD HBM}$	ESD HBM voltage level (HBM-MIL STD 883C)	+/- 2	kV
$V_{ESD CDM}$	ESD CDM voltage level (CDM AEC-Q100-011)	+/- 750	V

### 2.2 Thermal data

**Table 4. Thermal data**

Symbol	Parameter	Value	Unit
$R_{thj-case}$	Thermal resistance junction to case: PowerSSO-12	8	°K/W
$R_{thj-amb}$	Thermal resistance junction to ambient: PowerSSO-12	48	°K/W

*Note:* The values quoted are for PCB 77mm x 86 mm x 1.6mm, FR4, double layer with thermal vias (one copper heatsink layer, thickness 0.070 mm, area 8 cm<sup>2</sup>).

## 2.3 Electrical characteristics

Values specified in this section are for  $V_S = 5.6\text{ V to }31\text{ V}$ ,  $T_j = -40^\circ\text{C to }150^\circ\text{C}$  unless otherwise stated.

Table 5. General

Pin	Symbol	Parameter	Test condition	Min.	Typ.	Max.	Unit
$V_o$	$V_{o\_ref}$	Output voltage	$V_S = 8\text{ V to }18\text{ V}$ ; $I_o = 8\text{ mA to }300\text{ mA}$	4.9	5.0	5.1	V
$V_o$	$V_{o\_ref}$	Output voltage	$V_S = 5.6\text{ V to }31\text{ V}$ ; $I_o = 8\text{ mA to }300\text{ mA}$	4.85	5.0	5.15	V
$V_o$	$V_{o\_ref}$	Output voltage	$V_S = 5.6\text{ V to }31\text{ V}$ ; $I_o = 0.1\text{ mA to }8\text{ mA}$	4.75	5.0	5.25	V
$V_o$	$I_{short}$	Short circuit current	$V_S = 13.5\text{ V}$	0.8	1.8	2.6	A
$V_o$	$I_{lim}$	Output current capability <sup>(1)</sup>	$V_S = 13.5\text{ V}$	0.6	1.6	2.5	A
$V_S, V_o$	$V_{line}$	Line regulation voltage	$V_S = 6\text{ V to }28\text{ V}$ ; $I_o = 60\text{ mA}$			40	mV
$V_o$	$V_{load}$	Load regulation voltage	$V_S = 13.5\text{ V}$ ; $I_o = 8\text{ mA to }300\text{ mA}$ ; $T_j = 25^\circ\text{C}$			40	mV
			$V_S = 8\text{ V to }18\text{ V}$ ; $I_o = 8\text{ mA to }300\text{ mA}$			55	
$V_S, V_o$	$V_{dp}$	Drop voltage <sup>(2)</sup>	$I_o = 300\text{ mA}$			500	mV
$V_S, V_o$	SVR	Ripple rejection	$f_r = 100\text{ Hz}$ <sup>(3)</sup>		60		dB
$V_o$	$I_{oth\_H}$	Normal consumption mode output current		8			mA
$V_o$	$I_{oth\_L}$	Very low consumption mode output current				1.1	mA
$V_o$	$I_{oth\_Hyst}$	Output current switching threshold hysteresis	$V_S = 13.5\text{ V}$ ; $T_j = 25^\circ\text{C}$		0.8		mA
$V_S, V_o$	$I_{qs}$	Current consumption with regulator disabled $I_{qs} = I_{V_S} - I_o$	$V_S = 13.5\text{ V}$ ; $E_n = \text{low}$		5	10	$\mu\text{A}$
$V_S, V_o$	$I_{qn\_1}$	Current consumption with regulator enabled $I_{qn\_1} = I_{V_S} - I_o$	$V_S = 13.5\text{ V}$ ; $I_o = 0.1\text{ mA to }1\text{ mA}$ ; $E_n = \text{high}$		55	80	$\mu\text{A}$
$V_S, V_o$	$I_{qn\_300}$	Current consumption with regulator enabled $I_{qn\_300} = I_{V_S} - I_o$	$V_S = 13.5\text{ V}$ ; $I_o = 300\text{ mA}$ ; $E_n = \text{high}$		3	4.2	mA
	$T_w$	Thermal protection temperature		150		190	$^\circ\text{C}$
	$T_{w\_hy}$	Thermal protection temperature hysteresis			10		$^\circ\text{C}$

1. Measured output current when the output voltage has dropped 100 mV from its nominal value obtained at 13.5 V and  $I_o = 75\text{ mA}$ .

2.  $V_S - V_o$  measured dropout when the output voltage has dropped 100 mV from its nominal value obtained at 13.5V and  $I_o = 75$  mA.
3. Guaranteed by design.

### 3 Application information

#### 3.1 Voltage regulator

The voltage regulator uses a p-channel mos transistor as a regulating element. With this structure a very low dropout voltage at current up to 300 mA is obtained. The output voltage is regulated up to input supply voltage of 40 V. The high-precision of the output voltage (2%) is obtained with a pre-trimmed reference voltage. The voltage regulator automatically adapts its own quiescent current to the output current level. In light load conditions the quiescent current goes down to 55  $\mu$ A only (low consumption mode). This procedure features a certain hysteresis on the output current (see [Figure](#) ). Short-circuit protection to GND and a thermal shutdown are provided.

Figure 23. Application schematic

The input capacitor  $C_1 \geq 100 \mu\text{F}$  is necessary as backup supply for negative pulses which may occur on the line. The second input capacitor  $C_2 \geq 220 \text{ nF}$  is needed when the  $C_1$  is too distant from the  $V_S$  pin and it compensates smooth line disturbances. The  $C_0$  ceramic capacitor, connected to the output pin, is for bypassing to GND the high-frequency noise and it guarantees stability even during sudden line and load variations. Suggested value is  $C_0 = 220 \text{ nF}$  with  $\text{ESR} \geq 100 \text{ m}\Omega$ .

Stability region is reported in [Figure 24](#).

Figure 24. Stability region

Figure 25. Maximum load variation response

### 3.2 Reset

The reset circuit monitors the output voltage  $V_o$ . If the output voltage becomes lower than  $V_{o\_th}$  then  $R_{es}$  goes low with a delay time ( $t_{rr}$ ). When the output voltage becomes higher than  $V_{o\_th}$  then  $R_{es}$  goes high with a delay time  $T_{rd}$ . This delay is obtained by 32 periods of oscillator.

The oscillator period is given by:

**Equation 1**

$$T_{osc} = [(V_{Rhth} - V_{Rlth}) \times C_{tr}] / I_{cr} + [(V_{Rhth} - V_{Rlth}) \times C_{tr}] / I_{dr}$$

where:

- $I_{cr} = 20 \mu A$  is an internally generated charge current,
- $I_{dr} = 20 \mu A$  is an internally generated discharge current,
- $V_{Rhth} = 2.5 V$  (typ) and  $V_{Rlth} = 0.95 V$  (typ) are two voltage thresholds,
- $C_{tr}$  is an external capacitor to be put between  $V_{cr}$  pin and GND.

Reset pulse delay  $T_{rd}$  is given by:

**Equation 2**

$$T_{rd} = 32 \times T_{osc}$$

**Figure 26. Reset time diagram**

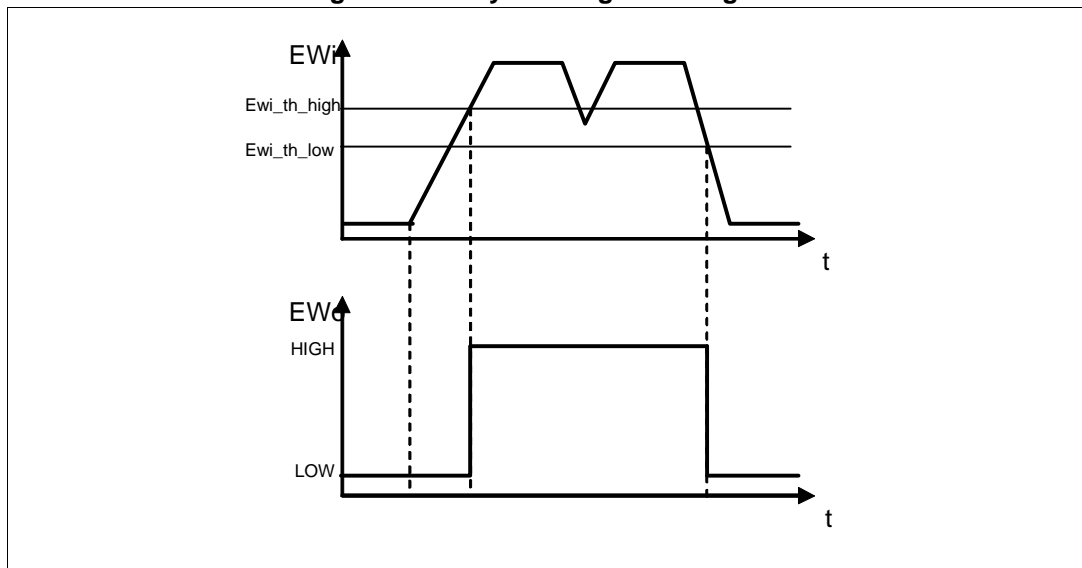

### 3.3 Early warning

This circuit compares the  $EW_i$  input signal with the internal voltage reference (typically 2.5 V). The use of an external voltage divider makes the comparator very flexible in the application. This function can be used to supervise the supply input voltage either before or after the protection diode and to give additional information to the microprocessor such as low voltage warnings.

Figure 27. Early warning time diagram

### 3.4 Enable

L5300GJ is also provided with an enable input, a high signal switches the regulator ON. In standby mode the output is disabled and the current consumption of the device (quiescent current) is less than 10  $\mu\text{A}$ .

Date	Revision	Changes
13-Mar-2009	3	<p><a href="#">Table 2: Pins description</a></p> <ul style="list-style-type: none"> <li>– <math>V_{OS}</math>: changed function</li> </ul> <p><a href="#">Table 6: Reset</a></p> <ul style="list-style-type: none"> <li>– <math>I_{Res\_Ikg}</math>: deleted <math>V_{Res} = 5</math> V from Test condition</li> <li>– <math>V_{O\_th}</math>: deleted <math>I_o = 1</math> mA to 300 mA from Test condition</li> <li>– <math>V_{Rlth}</math>: changed min/typ/max values</li> <li>– <math>T_{rd}</math>: changed min/typ/max values</li> </ul> <p><a href="#">Section 3.2: Reset</a></p> <ul style="list-style-type: none"> <li>– <math>V_{Rlth}</math>: changed coefficient</li> </ul> <p><a href="#">Section 3.4: Enable</a></p> <ul style="list-style-type: none"> <li>– Replaced 5 <math>\mu</math>A with 10 <math>\mu</math>A</li> </ul>
07-Dec-2009	4	<p>Updated corporate template (from V2 to V3)</p> <p>Updated features list.</p> <p>Updated <a href="#">Figure 2: Configuration diagram (top view)</a></p> <p><a href="#">Table 2: Pins description</a></p> <ul style="list-style-type: none"> <li>– Added new row</li> </ul> <p><a href="#">Table 5: General</a></p> <ul style="list-style-type: none"> <li>– <math>I_{short}</math>: changed min/typ/max value</li> <li>– <math>I_{lim}</math>: changed min/typ/max value</li> <li>– <math>V_{line}</math>: changed Test conditions</li> <li>– <math>V_{load}</math>: changed max value for <math>V_s = 8</math> V to 18 V, added new row</li> </ul> <p><a href="#">Table 6: Reset</a></p> <ul style="list-style-type: none"> <li>– <math>V_{Rlth}</math>: changed min/typ value</li> </ul> <p><a href="#">Table 8: Enable</a></p> <ul style="list-style-type: none"> <li>– <math>I_{leak}</math>: changed typ value</li> </ul> <p><a href="#">Section 3.3: Early warning</a></p> <ul style="list-style-type: none"> <li>– changed typical internal voltage reference value (from 1.23 V to 2.5 V)</li> </ul> <p>Added <a href="#">Section 2.4: Electrical characteristics curves</a>.</p> <p>Updated <a href="#">Chapter 3.1: Voltage regulator</a>.</p>
27-Jan-2012	5	Updated <a href="#">Figure 23: Application schematic</a> and <a href="#">Figure 24: Stability region</a> .
07-Feb-2012	6	Modified <a href="#">Figure 24: Stability region on page 15</a> .
19-Sep-2013	7	Updated disclaimer.
26-Sep-2018	8	Updated template. Updated <a href="#">Features</a> and title.

**IMPORTANT NOTICE – PLEASE READ CAREFULLY**

STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, enhancements, modifications, and improvements to ST products and/or to this document at any time without notice. Purchasers should obtain the latest relevant information on ST products before placing orders. ST products are sold pursuant to ST's terms and conditions of sale in place at the time of order acknowledgement.

Purchasers are solely responsible for the choice, selection, and use of ST products and ST assumes no liability for application assistance or the design of Purchasers' products.

No license, express or implied, to any intellectual property right is granted by ST herein.

Resale of ST products with provisions different from the information set forth herein shall void any warranty granted by ST for such product.
