

## Very low-dropout voltage regulator with inhibit function

Datasheet - production data

### Description

The LEXX is a very low-dropout voltage regulator available in SO-8, TO-92 packages and over a wide range of output voltages.

The very low-dropout voltage (0.2 V) and low quiescent current make it particularly suitable for low-noise, low-power applications and in battery-powered systems.

This device is pin-to-pin compatible with the L78L series. Furthermore, in the 8-pin configuration (SO-8), it uses a shutdown logic control (pin 5, TTL compatible). This means that when the device is used as a local regulator, a part of the board can be put in standby, decreasing the total power consumption. In the three-terminal configuration (TO-92), the device is always in on-state. It requires a 2.2  $\mu$ F capacitor for stability, reducing the component size and cost.

### Features

- Very low-dropout voltage (0.2 V typ.)
- Very low quiescent current (typ. 50  $\mu$ A in OFF mode, 0.5 mA in ON mode, no load)
- Output current up to 100 mA
- Output voltages: 3 V, 3.3 V, 4.5 V, 5 V, 8 V
- Internal current and thermal limit
- Small 2.2  $\mu$ F capacitor for stability
- Available in  $\pm 1\%$  (A) or  $\pm 2\%$  (C) selection at 25  $^{\circ}$ C
- Supply voltage rejection: 80 dB (typ.)
- Temperature range: - 40 to 125  $^{\circ}$ C

### 3 Maximum ratings

**Table 2. Absolute maximum ratings**

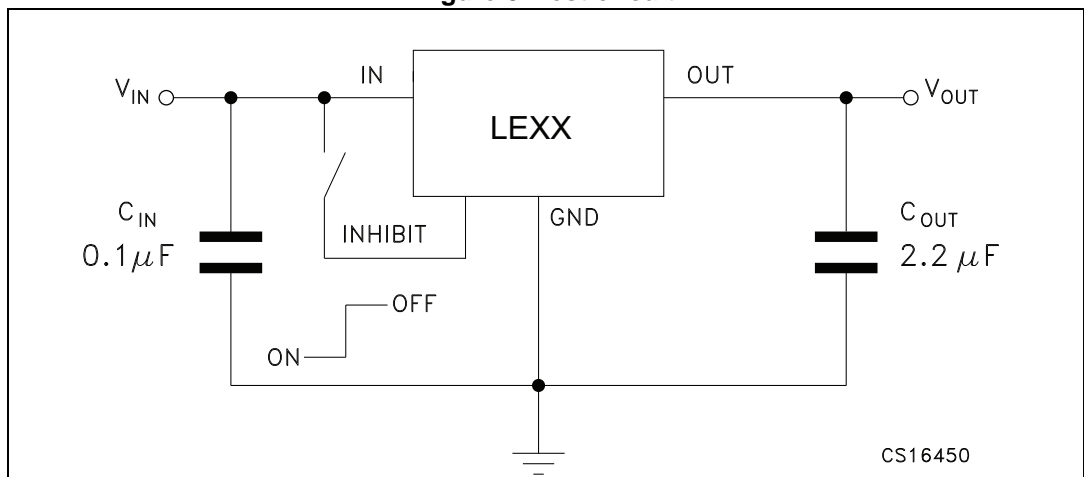

Symbol	Parameter	Value	Unit
$V_I$	DC input voltage	20	V
$I_O$	Output current	Internally limited <sup>(1)</sup>	
$P_{TOT}$	Power dissipation	Internally limited	
$T_{STG}$	Storage temperature range	-65 to 150	°C
$T_{OP}$	Operating junction temperature range	-40 to 125	°C

1. Our SO-8 package, used for voltage regulators, is modified internally to have pins 2, 3, 6 and 7 electrically fused to the die attach pad. This frame decreases the total thermal resistance of the package and increases its ability to dissipate power when an appropriate area of copper on the printed circuit board is available for heatsinking. The external dimensions are the same as SO-8 standard.

**Note:** If the INHIBIT pin is left floating, the regulator is in ON mode. However, when the inhibit function is not used, it should be grounded to avoid any noise.
