

Low-power dual voltage comparator

Datasheet - production data

Features

- Wide single supply voltage range or dual supplies 2 V to 36 V or ± 1 V to ± 18 V
- Very low supply current (0.4 mA) independent of supply voltage (1 mW/comparator at 5 V)
- Low input bias current: 25 nA typ.
- Low input offset current: ± 5 nA typ.
- Input common-mode voltage range includes ground
- Low output saturation voltage: 250 mV typ. ($I_o = 4$ mA)
- Differential input voltage range equal to the supply voltage
- TTL, DTL, ECL, MOS, CMOS compatible outputs

Description

This device consists of two independent low power voltage comparators designed specifically to operate from a single supply over a wide range of voltages. Operation from split power supplies is also possible.

These comparators also have a unique characteristic in that the input common-mode voltage range includes ground even though operated from a single power supply voltage.

1 Absolute maximum ratings and operating conditions

Table 1: Absolute maximum ratings (AMR)

Symbol	Parameter	Value	Unit	
V_{CC}	Supply voltage	± 18 or 36	V	
V_{id}	Differential input voltage	± 36		
V_{in}	Input voltage	-0.3 to 36		
	Output short-circuit to ground ⁽¹⁾	20	mA	
R_{thja}	Thermal resistance junction to ambient ⁽²⁾	SO8	125	°C/W
		TSSOP8	120	
R_{thjc}	Thermal resistance junction to case ⁽²⁾	SO8	40	
		TSSOP8	37	
T_j	Maximum junction temperature	160	°C	
T_{stg}	Storage temperature range	-65 to 150		
ESD	HBM: human body model ⁽³⁾	800	V	
	MM: machine model ⁽⁴⁾	200		
	CDM: charged device model ⁽⁵⁾	1500		

Notes:

⁽¹⁾Short-circuit from the output to V_{CC}^+ can cause excessive heating and eventual destruction. The maximum output current is approximately 20 mA, independent of the magnitude of V_{CC}^+ .

⁽²⁾Short-circuits can cause excessive heating and destructive dissipation. Values are typical.

⁽³⁾Human body model: a 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 k Ω resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.

⁽⁴⁾Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω). This is done for all couples of connected pin combinations while the other pins are floating.

⁽⁵⁾Charged device model: all pins and the package are charged together to the specified voltage and then discharged directly to the ground through only one pin. This is done for all pins.

Table 2: Operating conditions

Symbol	Parameter	Value	Unit
V_{CC}^+	Supply voltage	2 to 36	V
T_{oper}	Operating free-air temperature range	-40 to 150	°C
V_{icm}	Input common mode voltage range ($V_{CC} = 30$ V), $T_{amb} = 25$ °C ⁽¹⁾	0 to (V_{CC+}) - 1.5	V
	Input common mode voltage range ($V_{CC} = 30$ V), $T_{min} \leq T_{amb} \leq T_{max}$ ⁽¹⁾	0 to (V_{CC+}) - 2	

Notes:

⁽¹⁾The input common-mode voltage of either input signal voltage should not be allowed to go negative by more than 0.3 V. The upper end of the common-mode voltage range is (V_{CC}^+) - 1.5 V, but either or both inputs can go to 30 V without damage.

2 Circuit schematics

Figure 1: Schematic diagram (1/2 LM2903)

3 Electrical characteristics

Table 3: $V_{CC+} = 5\text{ V}$, $V_{CC-} = \text{GND}$, $T_{\text{amb}} = 25\text{ °C}$ (unless otherwise specified),
 $T_{\text{min}} = -40\text{ °C}$, and $T_{\text{max}} = 150\text{ °C}$

Symbol	Parameter	Min.	Typ.	Max.	Unit
V_{io}	Input offset voltage ⁽¹⁾		1	7	mV
	Input offset voltage, $T_{\text{min}} \leq T_{\text{amb}} \leq T_{\text{max}}$			15	
I_{io}	Input offset current		5	50	nA
	Input offset current, $T_{\text{min}} \leq T_{\text{amb}} \leq T_{\text{max}}$			150	
I_{ib}	Input bias current ⁽²⁾		25	250	nA
	Input bias current, $T_{\text{min}} \leq T_{\text{amb}} \leq T_{\text{max}}$			400	
A_{VD}	Large signal voltage gain, $(V_{CC+}) = 15\text{ V}$, $R_L = 15\text{ k}\Omega$, $V_o = 1\text{ to }11\text{ V}$	25	200		V/mV
I_{CC}	Supply current, all comparators, $(V_{CC+}) = 5\text{ V}$, no load		0.4	1	mA
	Supply current, all comparators, $(V_{CC+}) = 30\text{ V}$, no load		1	2.5	
V_{id}	Differential input voltage ⁽³⁾			V_{CC+}	V
V_{OL}	Low level output voltage, $V_{id} = -1\text{ V}$, $I_{\text{sink}} = 4\text{ mA}$		250	400	mV
	Low level output voltage, $T_{\text{min}} \leq T_{\text{amb}} \leq T_{\text{max}}$			800	
I_{OH}	High level output current, $(V_{CC+}) = V_o = 30\text{ V}$, $V_{id} = 1\text{ V}$		0.1		nA
	High level output current, $T_{\text{min}} \leq T_{\text{amb}} \leq T_{\text{max}}$			1	μA
I_{sink}	Output sink current, $V_{id} = -1\text{ V}$, $V_o = 1.5\text{ V}$	6	16		mA
	Output sink current, $T_{\text{min}} \leq T_{\text{amb}} \leq T_{\text{max}}$	2			
t_{re}	Small signal response time, $R_L = 5.1\text{ k}\Omega$ to (V_{CC+}) ⁽⁴⁾		1.3		μs
t_{rel}	Large signal response time, TTL input, $V_{\text{ref}} = 1.4\text{ V}$, $R_L = 5.1\text{ k}\Omega$ to (V_{CC+}) , output signal at 50 % of final value ⁽⁵⁾			500	ns
	Large signal response time, TTL input, $V_{\text{ref}} = 1.4\text{ V}$, $R_L = 5.1\text{ k}\Omega$ to (V_{CC+}) , output signal at 50 % of final value ⁽⁵⁾			1	μs

Notes:

⁽¹⁾At the output switch point, $v_o \approx 1.4\text{ V}$, $R_S = 0\text{ }\Omega$ with (V_{CC+}) from 5 V to 30 V , and over the full input common-mode range (0 V to $(V_{CC+}) - 1.5\text{ V}$).

⁽²⁾The direction of the input current is out of the IC due to the PNP input stage. This current is essentially constant, independent of the state of the output, so there is no load charge on the reference of input lines.

⁽³⁾Positive excursions of the input voltage may exceed the power supply level. As long as the other voltage remains within the common-mode range, the comparator will provide a proper output state. The low input voltage state must not be less than -0.3 V (or 0.3 V below the negative power supply, if used).

⁽⁴⁾The response time specified is for a 100 mV input step with 5 mV overdrive.

⁽⁵⁾Maximum values are guaranteed by design and evaluation.

4 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK[®] packages, depending on their level of environmental compliance. ECOPACK[®] specifications, grade definitions and product status are available at: www.st.com. ECOPACK[®] is an ST trademark.

5 Ordering information

Table 6: Order codes

Order code	Temperature range	Package	Packing	Marking
LM2903HYDT ⁽¹⁾	-40 °C to 150 °C	SO8 (automotive grade)	Tape and reel	2903HY
LM2903HYPT ⁽¹⁾		TSSOP8 (automotive grade)		LM3H

Notes:

⁽¹⁾ Qualified and characterized according to AEC Q100 and Q003 or equivalent, advanced screening according to AEC Q001 & Q 002 or equivalent.

6 Revision history

Table 7: Document revision history

Date	Revision	Changes
25-Sep-2003	1	Initial release.
23-Aug-2005	2	PPAP references inserted in the datasheet, see order codes table.
27-Mar-2008	3	Added ESD parameters in AMR table. Updated document format.
13-Mar-2012	4	Changed value of T_J in Table 1: Absolute maximum ratings (AMR). Removed LM2903HYD order code from Table 5.
24-Sep-2015	5	Added TSSOP8 package and new data related to it (Table 1: "Absolute maximum ratings (AMR)" and Table 6: "Order codes"). Removed obsolete wafer and all information pertaining to it (pad locations, order code). Table 6: "Order codes": removed obsolete order codes JLM2903H-E6D1, LM2903HD, and LM2903HDT.
22-Oct-2015	6	Table 3 : modified title Figure 2 , Figure 3 , and Figure 4 : corrected text of Y-axes
