SMP100LC

Trisil™ for telecom equipment protection

Features

- Bidirectional crowbar protection
- Voltage range from 8 V to 400 V
- Low capacitance from 20 pF to 45 pF @ 2 V
- Low leakage current: I_R = 2 µA max
- Holding current: I_H = 150 mA min.
- Repetitive peak pulse current: I_{PP} = 100 A (10/1000 µs)

Benefits

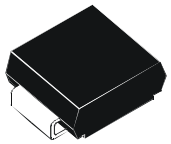
- Trisils are not subject to ageing and provide a fail safe mode in short circuit for better protection.
- Helps equipment meet main standards such as UL60950, IEC 950 / CSA C22.2 and UL1459.
- Epoxy meets UL94, V0.
- Package is JEDEC registered (DO-214AA).

Complies with the following standards

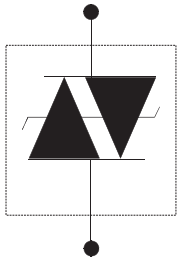
- GR-1089 Core
- ITU-T-K20/K21
- IEC 61000-4-5
- IEC 61000-4-2 level 4
- TIA/EIA IS-968
- UL497B recognized, UL file E136224

Applications

Any sensitive equipment requiring protection against lightning strikes and AC power faults. These devices are dedicated to central office protection as they comply with the most stressful standards. Their low capacitances make them suitable for xDSL.



SMB
(JEDEC DO-214AA)



Description

The SMP100LC is a series of low capacitance transient surge arrestors designed for the protection of high data rate communication equipment. The low capacitance of the devices avoids any distortion of the signal and is compatible with digital transmission line cards (xDSL, ISDN...).

SMP100LC series tested and confirmed compatible with Cooper Bussmann Telecom Circuit Protector TCP 1.25A.

The SMP100LC-xxx with the fuse TCP1.25A or TCP2A is compliant with Telcordia GR1089 (lightning and AC power fault tests), ITU-T K20/K21 (lightning and AC power fault tests), TIA/EIA-IS-968 (formerly FCC Part 68 lightning tests), and UL60950 (AC power fault tests). The use of the TCP1.25A allows the SMP100LC-xxx to be safe for the 2nd level (B criteria) AC power fault tests.

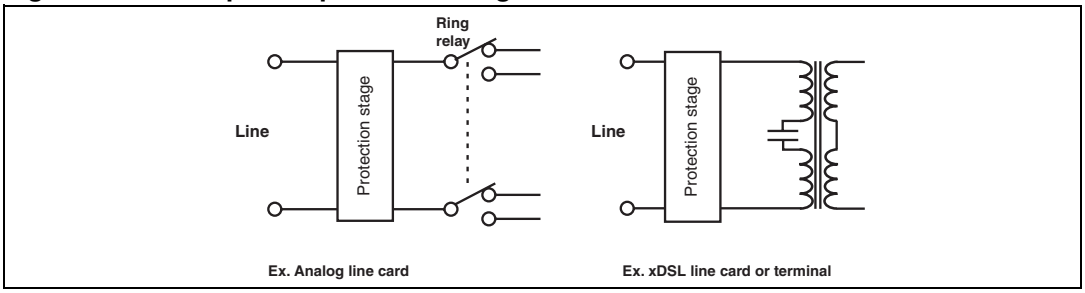
2 Application information

In wire line applications, analog or digital, both central office and subscriber sides have to be protected. This function is assumed by a combined series / parallel protection stage.

Figure 10. Examples of protection stages for line cards



In such a stage, parallel function is assumed by one or several Trisil, and is used to protect against short duration surge (lightning). During this kind of surges the Trisil limits the voltage across the device to be protected at its break over value and then fires. The fuse assumes the series function, and is used to protect the module against long duration or very high current mains disturbances (50/60Hz). It acts by safe circuit opening. Lightning surge and mains disturbance surges are defined by standards like GR1089, TIA/EIA IS-968, ITU-T K20.

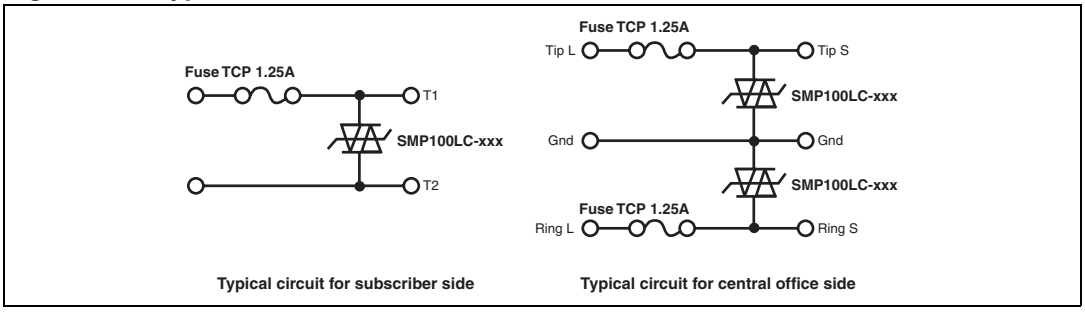

Figure 12. Test method of the board with fuse and Trisil

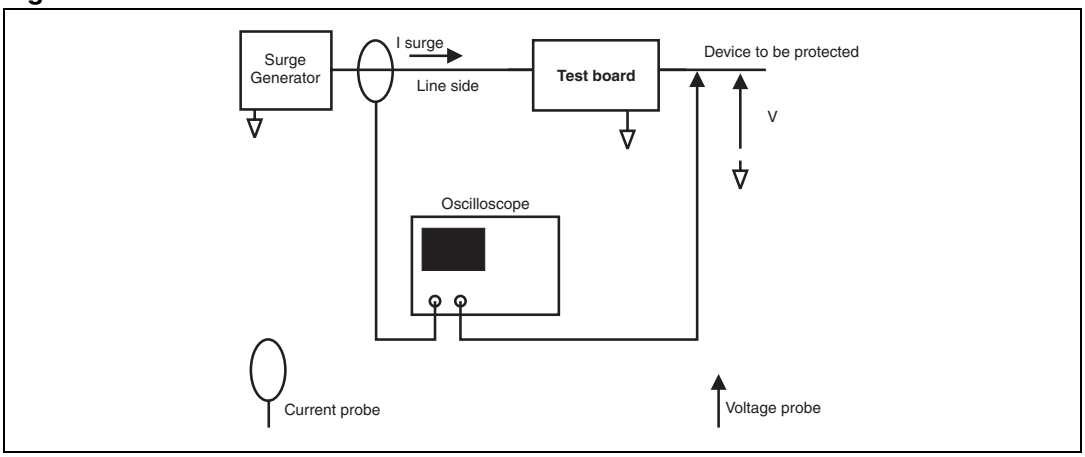
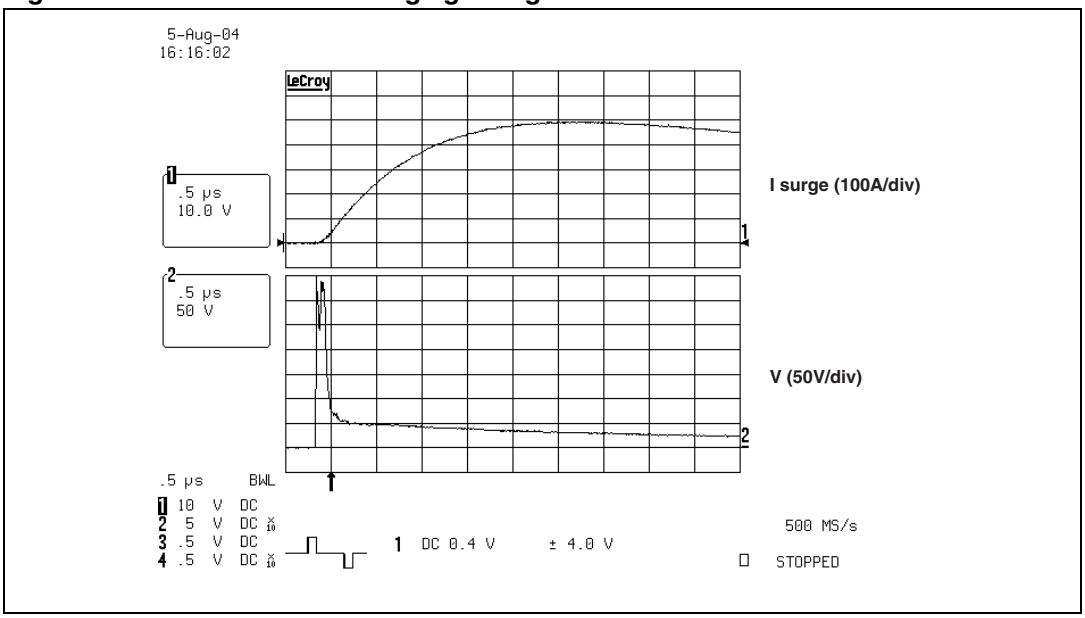


These topologies, using SMP100LC from ST and TCP1.25A from Cooper Bussmann, have been functionally validated with a Trisil glued on the PCB. Following example was performed with SMP100LC-270 Trisil. For more information, see Application Note AN2064.

Figure 13. Trisil turns on during lightning strike



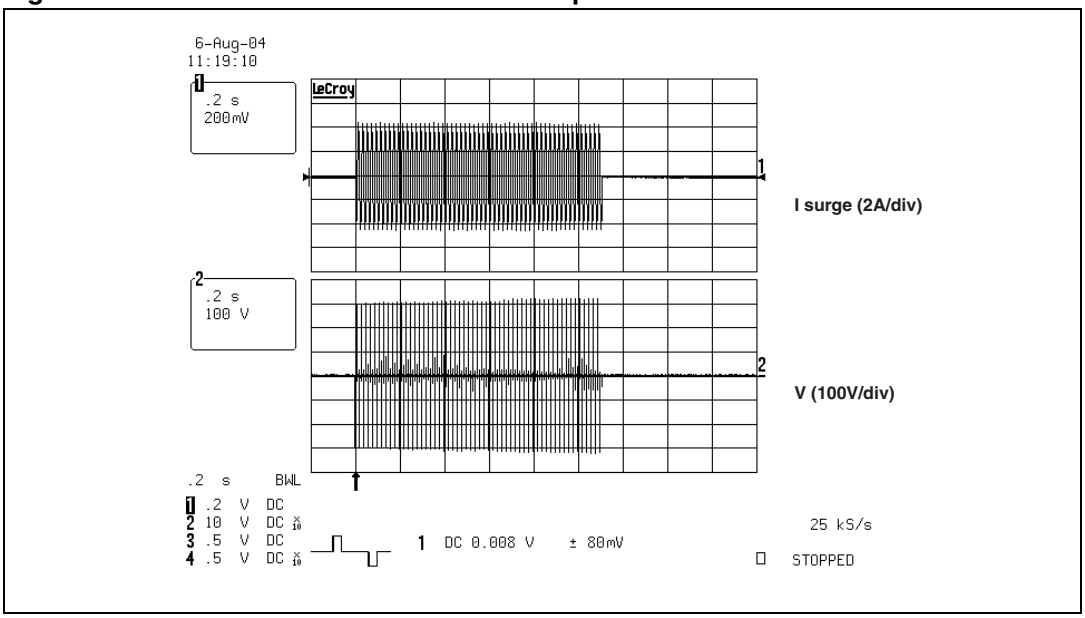
Test conditions:

2/10 µs + and - 2.5 and 5 kV, 500 A (10 pulses of each polarity), T_{amb} = 25 °C

Test result:

Fuse and Trisil OK after test in accordance with GR1089 requirements.

Figure 14. Trisil action while fuse remains operational



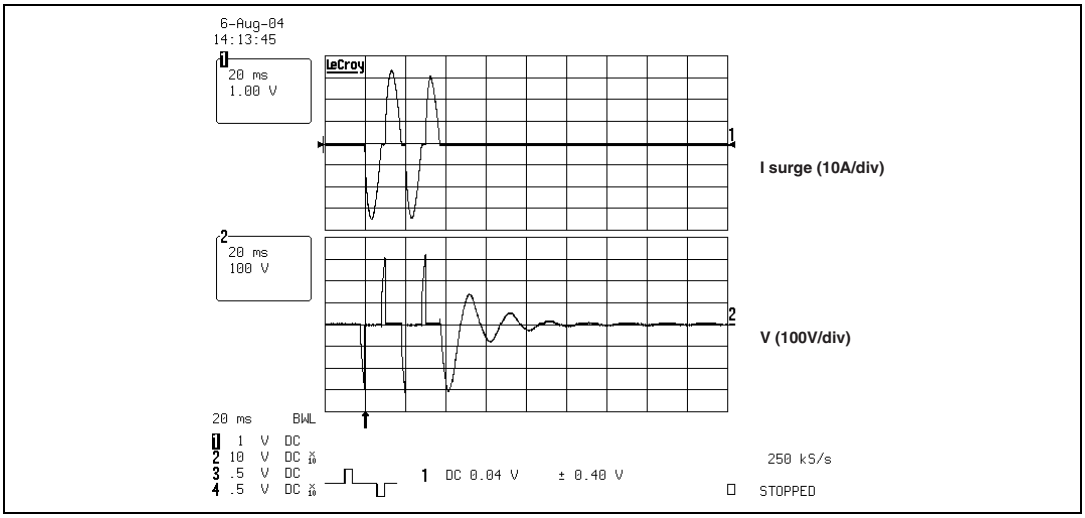
Test conditions:

600 V, 3 A, 1.1 s (first level), T_{amb} = 25 °C

Test result:

Fuse and Trisil OK after test in accordance with GR1089 requirements.

Figure 15. High current AC power test: the fuse acts like a switch by opening the circuit



Test conditions:

277 V, 25 A (second level), T_{amb} = 25 °C

Test result:

Fuse safely opened and Trisil OK after test in accordance with GR1089 requirements.

Figure 16. Test circuit 1 for Dynamic I_{BO} and V_{BO} parameters

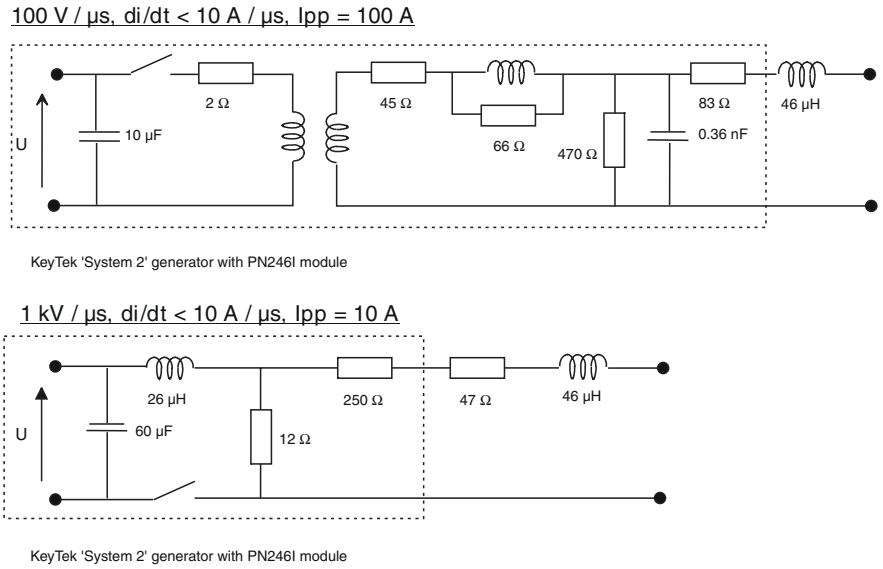


Figure 17. Test circuit 2 for I_{BO} and V_{BO} parameters

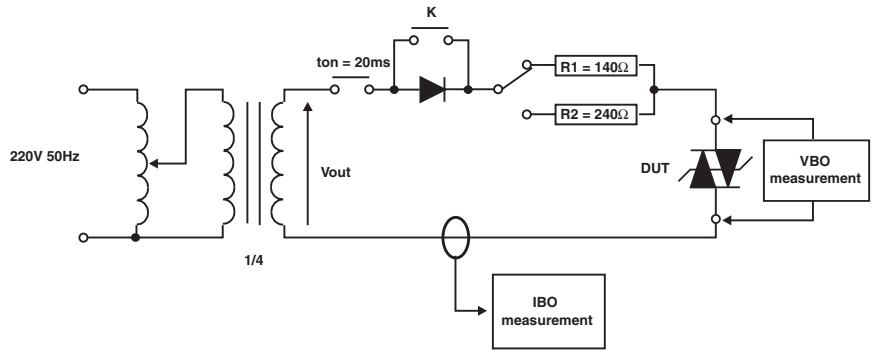


TEST PROCEDURE

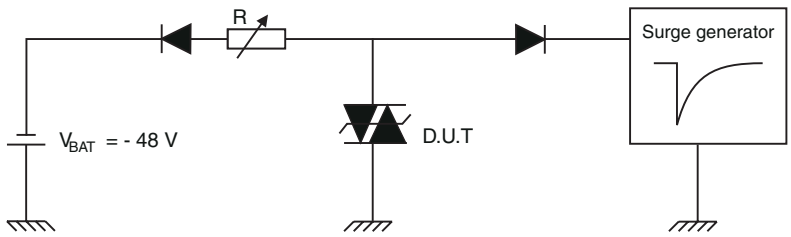
Pulse test duration (tp = 20ms):

- for Bidirectional devices = Switch K is closed
- for Unidirectional devices = Switch K is open

V_{OUT} selection:

- Device with V_{BO} < 200V ➔ V_{OUT} = 250 V_{RMS}, R1 = 140Ω
- Device with V_{BO} ≥ 200V ➔ V_{OUT} = 480 V_{RMS}, R2 = 240Ω

Figure 18. Test circuit 3 for dynamic I_H parameter



This is a GO-NOGO test which allows to confirm the holding current (I_H) level in a functional test circuit.

TEST PROCEDURE

1/ Adjust the current level at the I_H value by short circuiting the AK of the D.U.T.

2/ Fire the D.U.T. with a surge current → I_{PP} = 10A, 10/1000µs.

3/ The D.U.T. will come back off-state within 50ms maximum.
