Description

The SPC560B64A100S, SPC560BADPT144S and SPC560BADPT176S are evaluation systems supporting the STMicroelectronics SPC560Bxx family of automotive microprocessors.

The complete system consists of an SPC56XXMB motherboard and a mini module which plugs directly into the motherboard. Different mini modules are available for evaluating the whole family of devices in all supported packages.

The evaluation system (motherboard and daughter card) allows full access to the CPU, all the CPU's I/O signals, and the motherboard peripherals (such as CAN, SCI and LIN). The mini modules itself can be used as a standalone unit when access to the I/O pins or peripherals is not needed.

The MCU is not included, it must be purchased separately. Please contact your sales representative for more details.
