

## Electronic speed controller reference design for drones

### Features

- Complete reference design for electronic speed controller implementing a sensorless FOC algorithm
- Designed for drones with 6S pack of LiPo batteries or systems with an equivalent suitable DC supply
- ESC ready for communication with any standard flight control unit (FCU): PWM or CAN
- Temperature overheating protection
- Nominal operating voltage range: 3S-6S Li-Po battery DC voltage level (11.1 to 22.2 V)
- Maximum RMS output current: 20 Arms
- Output peak current: 30 A
- Battery eliminator circuit (BEC): 5 V/0.5 A for external receiver or FCU
- Complete pre-configured firmware package available ([STSW-ESC001V1](#))
- Supported by ST motor control software SDK and ST motor profiler
- Compact PCB design: 29.1 x 58 mm
- Further target applications:
  - motor driving for RC vehicles: electric cars, helicopter, trucks, etc.
  - any three-phase BLDC or PMSM motor application
- RoHS and WEEE compliant

Electronic speed controller reference design for drones	<a href="#">STEVAL-ESC001V1</a>
Sensorless FOC reference design firmware for STEVAL-ESC001V1	<a href="#">STSW-ESC001V1</a>
ARM Cortex-M4 core mainstream mixed signals MCUs with DSP and FPU	<a href="#">STM32F303CBT7</a>
N-channel 40 V, 2.1 mOhm typ., 120 A STripFET F7 Power MOSFET	<a href="#">STL160N4F7</a>

### Description

The [STEVAL-ESC001V1](#) reference design for electronic speed controllers (ESC) for drones fits entry-level commercial drone designs and drives any three-phase brushless (or PMSM) motor running off 6S LiPo battery packs, or any equivalent DC supply, up to 30 A peak current.

The [STEVAL-ESC001V1](#) lets you spin a motor and its propeller in minutes thanks to a complete pre-configured firmware package ([STSW-ESC001V1](#)), implementing a sensorless Field Oriented Controlled algorithm with 3-shunt current reading, speed control and full active braking.

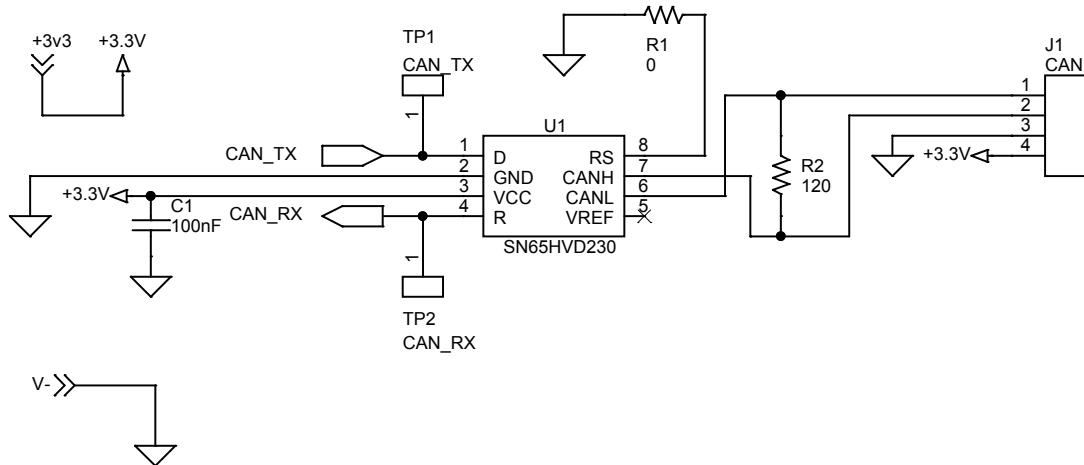

The reference design board can accept commands from a flight control unit through PWM signals; other communication bus interfaces like UART, CAN, and I<sup>2</sup>C are also available. The reference embeds a battery eliminator circuit working at 5 V, an NTC sensor for temperature measurement and circuitry for overcurrent / overvoltage protection (OCP/OVP). The compact form factor and current capability render this reference design suitable for electronic speed controllers on small and light unmanned aerial vehicles like professional drones.

The [STSW-ESC001V1](#) firmware/software package plus STM32 PMSM FOC software development kit - MC library let you refine your electronic speed controller design by acting on the field oriented control parameters embedded in the STM32 and experiment with the ST motor profiler to rapidly retrieve the motor parameters. The ST sensorless FOC algorithm ensures longer flight times and optimal dynamic performance.

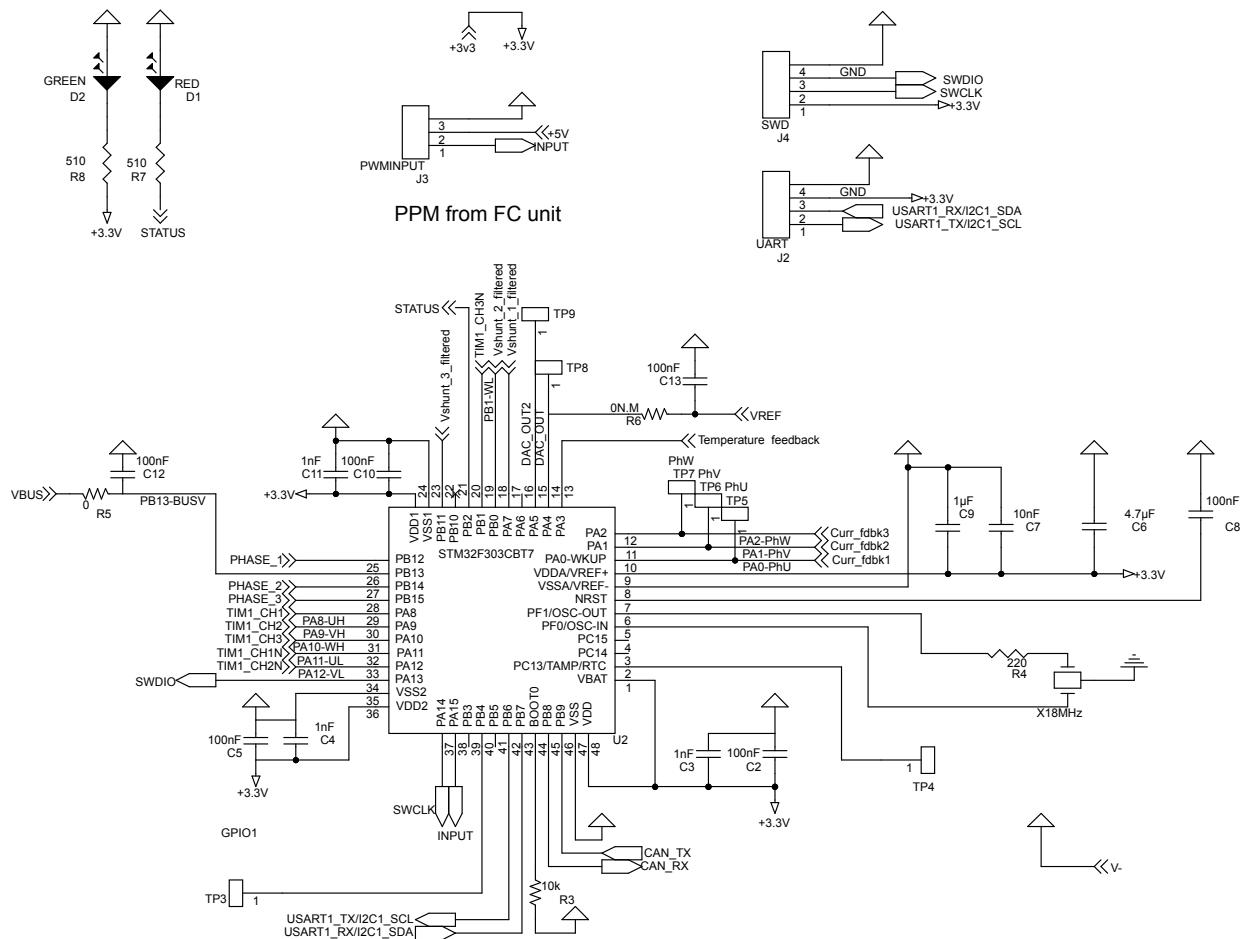

The [STEVAL-ESC001V1](#) has been designed around the highly efficient, low R<sub>dson</sub> STripFET F7 power MOSFETs, the high-performance [STM32F303CBT7](#) microcontroller with ARM® Cortex®-M4 core and the [L6398](#) drivers.

## Revision history

**Table 1. Document revision history**

Date	Version	Changes
05-Apr-2017	1	Initial release.
09-Aug-2017	2	Updated cover page title, features and description.
13-Nov-2018	3	Updated <a href="#">Figure 4. STEVAL-ESC001V1 circuit schematic (4 of 4)</a> . Added references to STL160N4F7.
