

## 100 W LED street lighting application using STLUX385A

**Data brief**

### Features

- STLUX385A based
- High efficiency (92%)
- Primary side controlled
- Up to 100 W (100 V at 1 A or 200 V at 0.5 A)
- Single isolated output suitable for LED connection
- Wide input voltage range: 90 V to 265 V AC
- Adjustable LED current and dimming
- Output resolution: 11-bit equivalent
- IDLE mode power consumption: < 200 mW
- Real-time fault detection and protection (e. g.: short- or open circuit)
- Remote control via DALI, 0 - 10 V, UART

### Description

The STEVAL385LEDPSR demonstration board is a complete and configurable solution that efficiently controls a single dimmable high brightness LED string using the STLUX385A digital controller.

The LED efficiency is high during all stages of dimming and the STEVAL385LEDPSR can achieve a 92% efficiency during full load while maintaining a low < 200 mW power consumption during idle periods.

The STLUX385A device handles a primary side regulated power conversion stage as well as all the supported communication links.

The power conversion stage consists of a PFC regulator followed by a "Zero Voltage Switching" (ZVS) LC resonant stage. The high precision dimming is adjusted using a primary side regulation (PSR) control technique.

The LED brightness can be dimmed by controlling the LED current down to a very low level.

The STEVAL385LEDPSR demonstration board provides all the physical communication interfaces such as a DALI, insulated 0-10 and UART. All the communication is managed by the STLUX385A device. The UART interface and STLUX385A flexibility allow to quickly connect the STEVAL385LEDPSR board to alternative interfaces such as the Wi-Fi, power line modems, Bluetooth® and ZigBee®.

This demonstration board is available with an order code STEVAL-ILL066V1 now.

### Board connector pinout

Table 1. Connector J8 pinout - AC-DC input

Name	Type	Function
ACIN	Power	Main AC/DC input
ACIN	Power	Main AC/DC input
EARTH	Power	Protective earth connection

Table 2. Connector J4 pinout - DC output

Name	Type	Function
“+”	Power	Positive load connection
“-”	Power	Negative load connection

**Table 3. Connector J3 pinout - DALI interfaces**

Name	Type	Function
DALI	DALI signal	DALI signal for isolated DALI interfaces - without polarization
DALI	DALI signal	DALI signal for isolated DALI interfaces - without polarization

**Table 4. Connector J9 pinout - 0 - 10 V**

Name	Type	Function
“+”	Positive reference	Positive reference for isolated 0 - 10 V interfaces
“-”	Negative reference	Negative reference for isolated 0 - 10 V interfaces

**Table 5. Connector J2 pinout - serial interfaces**

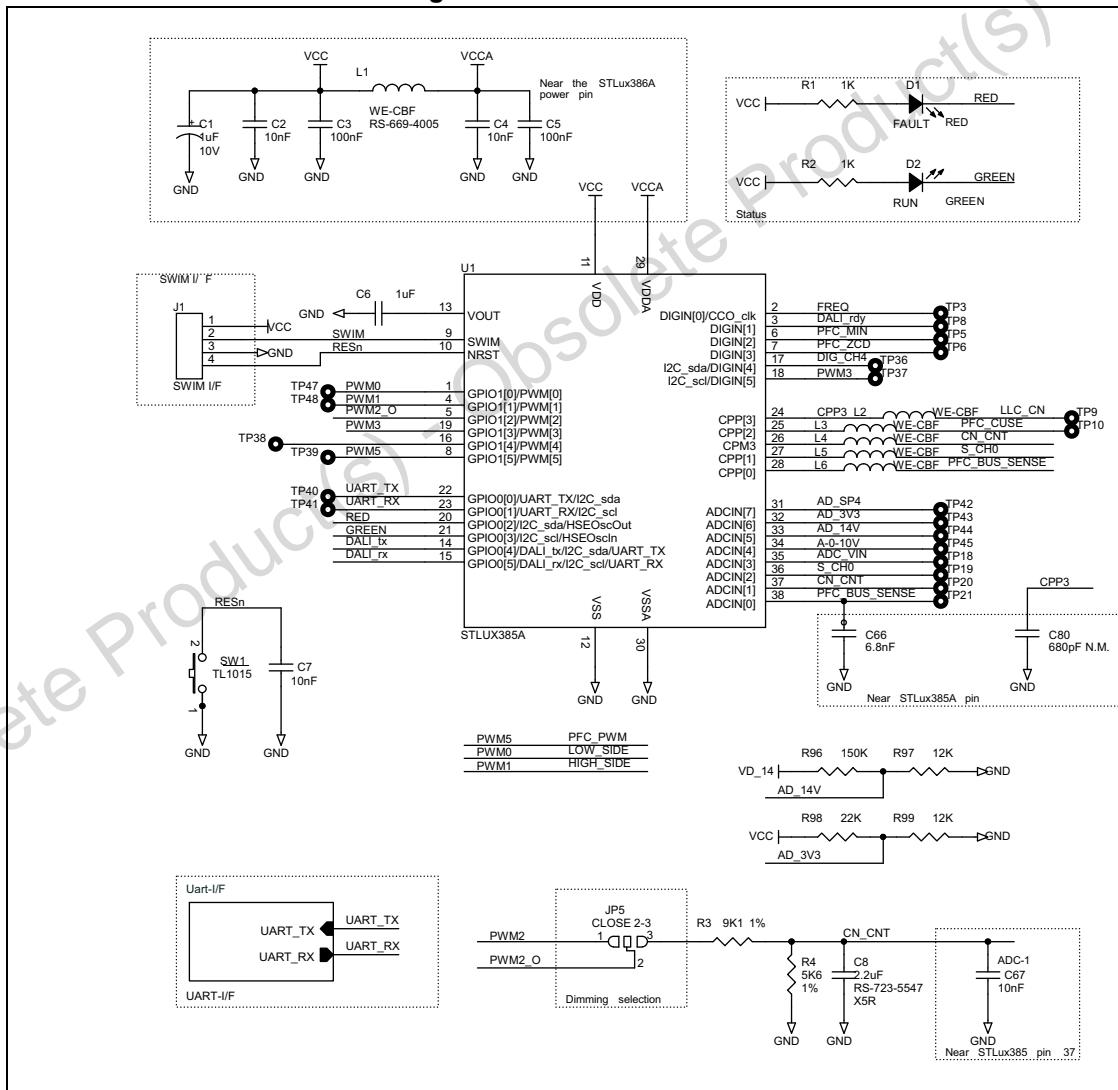

Name	Type	Function
1 (black)	Negative power	Directly connected to isolated Serial GND
2 (brown)	CTS <sub>n</sub>	Not used - pulled down
3 (red)	Fixed positive power	5.0 V power for the UART interfaces only
4 (orange)	TXD (input)	TXD signal - RXD on STLUX
5 (yellow)	RXD (output)	RXD signal - TXD from STLUX
6 (green)	RTS <sub>n</sub>	Not connected

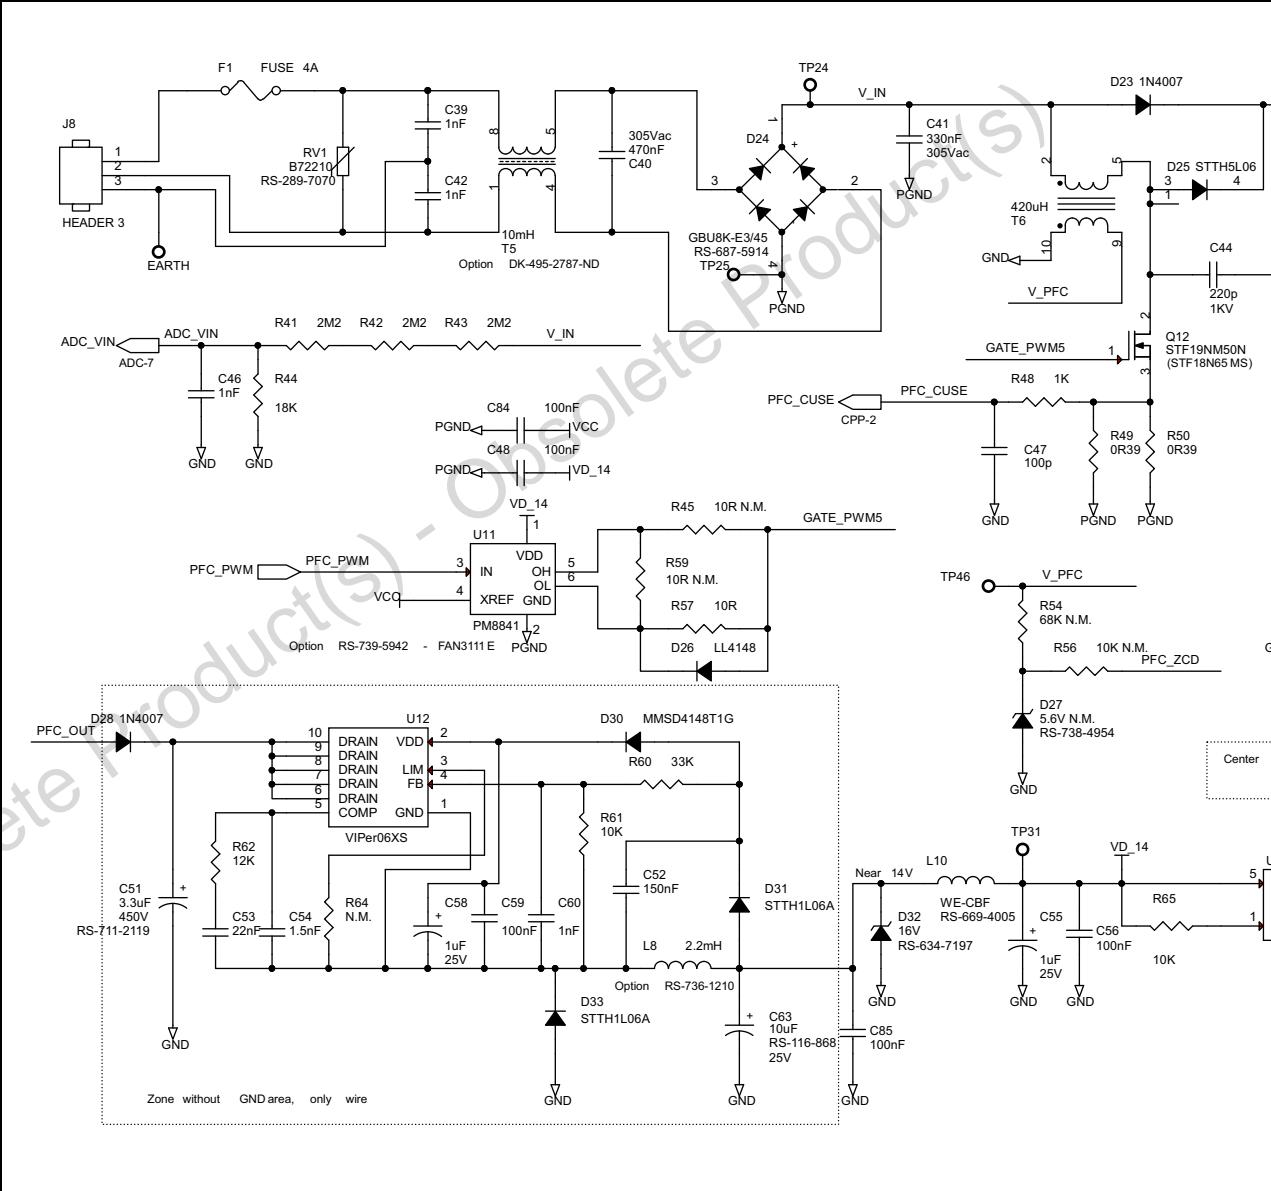

**Table 6. Connector J1 pinout - SWIM interfaces**

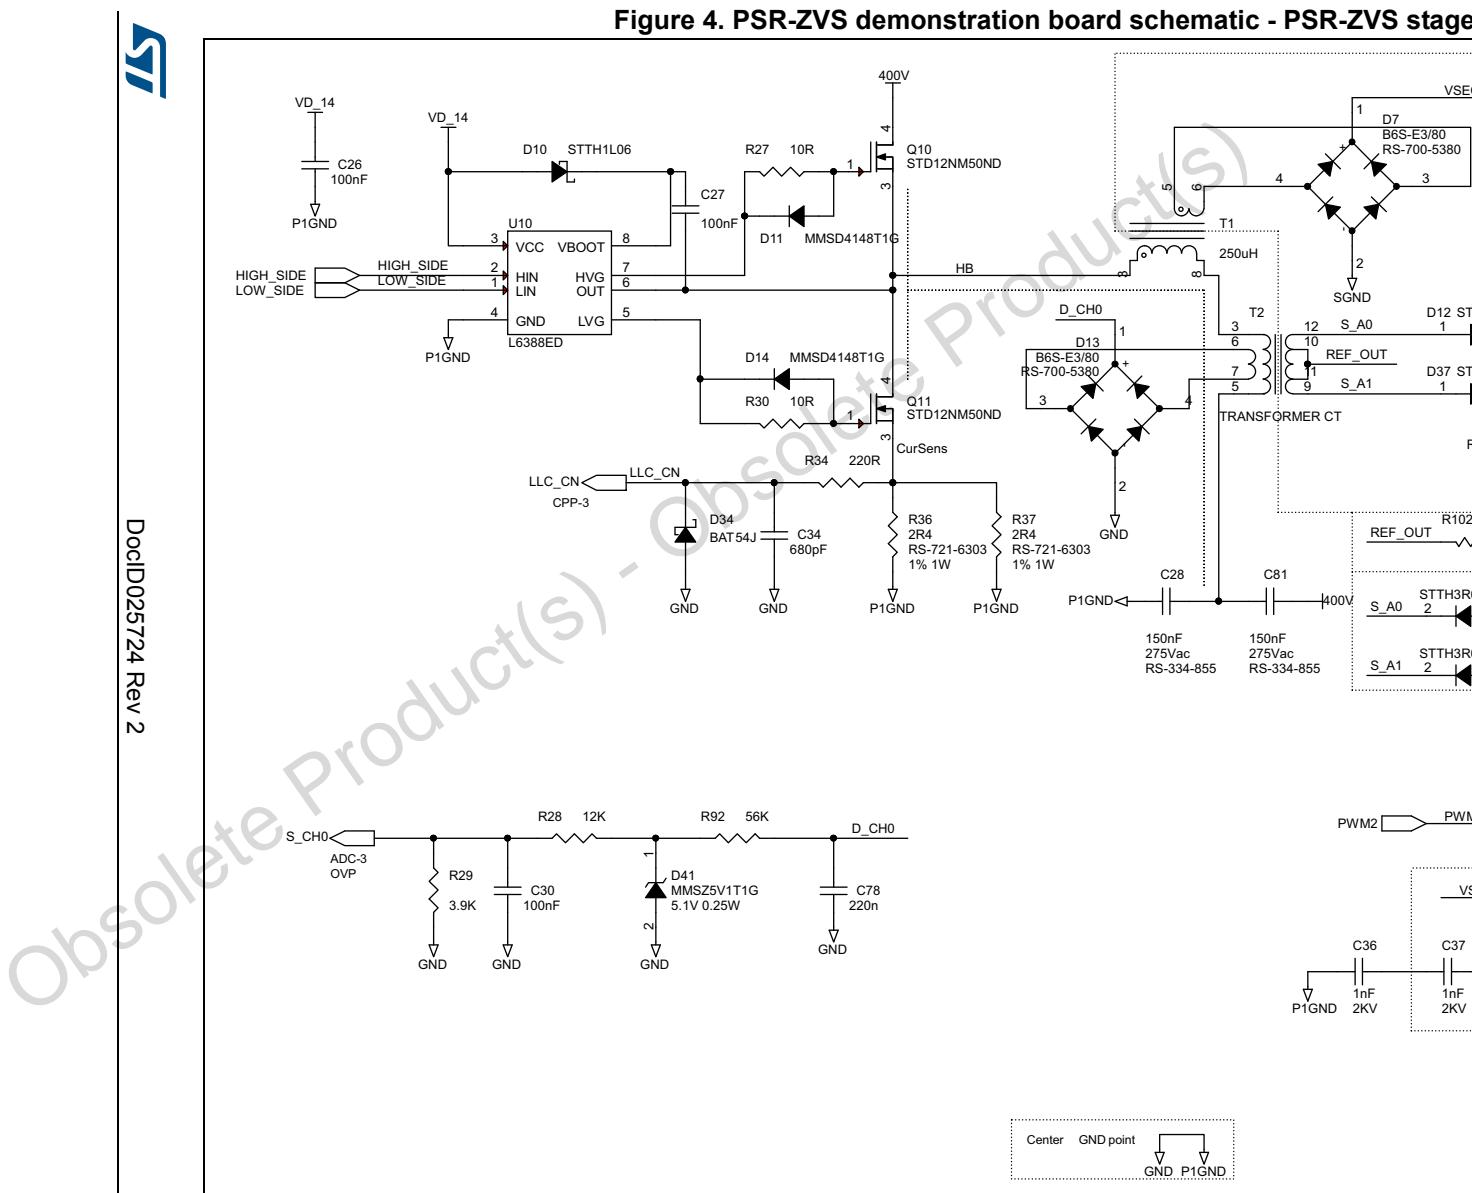

Name	Type	Function
1	VCC_SWIM	power reference from board
2	SWIM	SWIM signal to/from STLUX
3	GND_SWIM	Directly connected to primary GND
4	RES <sub>n</sub>	Connected to STLUX NRST pin
