STUSB03E

USB Transceiver

General features

- Compliant to USB V2.0 for full-speed (12Mb/s) and low-speed (1.5Mbps) operation
- HBM = ±14kV on D+, D– lines; ±5kV on VBUS
- ESD Compliant to IEC-61000-4.2 (level 3) on D+, D- lines
- Separate I/O supply with operation down to 1.6V
- Integrated 3.3V output LDO
- Very low power consumption to meet USB 'suspend' current requirements
- Small QFN16 lead free package 3x3 mm^2
- No power supply sequencing requirements
- Software controlled re-enumeration
- Integrated D+ pull-up resistor for FS operation

Description

The STUSB03E is a single chip transceiver that complies with the physical layer specifications of the Universal Serial Bus (USB) v2.0 standard. It has an integrated 5V to 3.3V regulator which allows direct powering from the V_{BUS}. The transceiver has an integrated voltage detector to

QFN16 (3mm x 3mm)

detect the presence of the V_{BUS} voltage and features an internal D+ pull-up resistor implemented in accordance with the 27% resistor ECN.

The STUSB03E also supports Sharing mode when V_{BUS} is not present, which allows the D+/D– lines to be shared with other serial protocols.

It supports both full-speed (12Mbps) and low-speed (1.5Mbps) operation. It is also designed to operate down to 1.6V so that it is compatible with lower system voltages of most portable systems, which include PDAs, MP3 Player and Cell phones.

2 Pin configuration

Figure 2. Pin connections (Top View)
Table 1. Pin description

Pin N°	Symbol	I/O	Name and function
1	SPD	I	Speed selection input. A logic HIGH operates at edge rates for "fullspeed" operation. A logic LOW operates edge rates for "lowspeed" operation. See also CON pin.
2	RCV	O	Receive Data. Output for USB differential data. (see *Table 2*)
3	VP	I/O	If OE# = H, VP = Receiver output (+) If OE# = L, VP = Driver input (+) (see *Table 2*)
4	VM	I/O	If OE# = H, VM = Receiver output (-) If OE# = L, VM = Driver input (-) (see *Table 2*)
5	CON	I	CONNECT (input). Connects the internal pull-up resistor to D+ if SPD and RSEL are logic high. Controls status of V_{PU} pin if SPD or RSEL is logic low.
6	GND		Ground reference
7	SUS	I	Suspend (active-high). Turns off internal circuits to reduce supply current.
8	RSEL	I	Full speed pull-up resistor selection input. If RSEL = 0 the internal pull-up resistor connected to D+ is disabled and an external resistor connected to V_{PU} pin must be used.
9	OE#	I	Output Enable (active-low). Enables transceiver data transmission onto the bus. When not active, the transceiver is in the receive mode. (see *Table 2*)
10, 11	D-, D+	I/O	Differential data lines that conform to the USB v2.0 standard. (see *Table 2*)
12	VTRM	O	3.3V Reference Supply Output. Requires a 1.0µF decoupling capacitor for stability.
13	V_{PU}	O	Pull-up Supply Voltage Output. Used to connect 1.5K pull-up speed detect resistor when RSEL or SPD is logic low. If CON = 0, V_{PU} is high impedance. If CON = 1, V_{PU} = 3.3V ±10% (see *Table 4.*).
14	V_{BUS}	I	USB Bus Supply Voltage (4V to 5.5V). Supplies power to the USB transceiver and internal circuitry.
15	V_{IF}	I	System Interface Supply Voltage (1.6V to 3.6V). Provides reference supply voltage for system I/O interface signals.
16	V_{BUSDET}	O	V_{BUS} indicator output. When V_{BUS} > 4.0V, V_{BUSDET} = High; when < 3.6V, V_{BUSDET} = Low (V_{IF} referred).
EXP	N.C.		Not connected.

3   Functional tables

Table 2.   Function selection

SUS	OE#	D+, D-	RCV	VP/VM	Function
L	L	Driving	Active	Active	Normal transmit mode
L	H	Receiving	Active	Active	Normal receive mode
H	L	Hi-Z	L	Not Active	Low power state
H	H	Hi-Z	L	Active	Receiving during suspend (low power state) [1]

(1) During suspend VP and VM are active in order to detect out of band signalling conditions

Table 3.   Sharing mode pin configuration

Input/output	Status
V_{BUS}	Floating or connected to GND
V_{IF}	1.6V to 3.6V input
D+, D-,	High impedance
VP, VM	High
RCV	Low
SPD	High impedance
V_{BUSDET}	Low
V_{PU}	High impedance
#OE, SUS, CON	High impedance inputs

Table 4. V_{PU} Status

SPD	RSEL	CON	V_{PU}
H	H	X	High impedance
H	L	L	High impedance
H	L	H	3.3V ± 10%
L	X	L	High impedance
L	X	H	3.3V ± 10%

Table 5.   Truth table during normal Mode

OE# = L					
Input		Output			Result
VP	VM	D+	D-	RCV	
L	L	L	L	X	SE0
L	H	L	H	L	Logic Low
H	L	H	L	H	Logic High
H	H	X	X	X	Undefined
OE# = H

D+	D-	VP	VM	RCV	
L	L	L	L	X	SE0
L	H	L	H	L	Logic Low
H	L	H	L	H	Logic High
H	H	X	X	X	Undefined

X = Undefined

4 Maximum ratings

Table 6. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{BUS}	Supply Voltage	6	V
V+	All other Inputs	-0.5 to 4.6	V
I_O	Output Current (D+, D-)	± 50	mA
I_O	Output Current (all others)	± 15	mA
I_I	Input Current	± 50	mA
ESD	D+, D-, HBM (Note 3)	± 14	kV
	V_{BUS} (Note 3)	± 5	
	All other pins (Note 3)	± 2	
T_{STG}	Storage Temperature Range	-65 to + 150	°C
T_{OPR}	Operating Temperature Range	-40 to + 85	°C

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional Operation under these conditions is not implied.

Note 3. Devices are ESD sensitive. Handling precautions recommended. Human body model, 1.5k in series with 100pF.

Table 7. Thermal data

Symbol	Parameter	Value	Unit
R_{thJA}	Thermal Resistance Junction-Ambient	59	°C/W

5   Electrical characteristics

Table 8.   DC electrical characteristics (system and USB interface) (V_{IF} = 3.6V, V_{BUS} = 5V unless otherwise noted; T_A = 25°C, specifications over temperature, -40 to 85°C)

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
V_{BUS}	USB Supply Voltage		4		5.5	V

8 Functional description

The STUSB03E is designed to provide USB connectivity in mobile systems where available system supply voltages are not able to satisfy USB requirements. The STUSB03E can operate down to supply voltages of 1.6V and still meet USB physical layer specifications. As shown in the circuit above, the STUSB03E takes advantage of the USB supply voltage, V_{BUS}, to operate the transceiver. The system voltage, V_{IF}, is used to set the reference voltage used by the digital I/O lines interfacing to the system controller. Internal circuitry provides translation between the USB and system voltage domains. V_{IF} will typically be the main supply voltage rail for the controller.

In addition, a 3.3V, 10% termination supply voltage, V_{PU}, is provided to support speed selection. V_{PU} can be disabled or enabled under software control via the CON input. This allows for software-controlled connect or disconnect states. A 1.5K resistor is required to be connected between this pin and the D- line when operating in low speed mode. In full speed mode either an internal pull-up resistor or an external one connected between V_{PU} pin and D+ line can be used; the desired configuration is chosen by tying R_{SEL} pin to V_{IF} or GND.

The use of ESD transient protection devices is not required for operation, but is recommended.

9 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
