## Description

These SuperMESH3 ${ }^{\text {TM }}$ Power MOSFETs are the result of improvements applied to STMicroelectronics' SuperMESH ${ }^{\text {TM }}$ technology, combined with a new optimized vertical structure. These devices boast an extremely low onresistance, superior dynamic performance and high avalanche capability, rendering them suitable for the most demanding applications.

The built-in-back Zener diodes have specifically been designed to enhance not only the device's ESD capability, but also to make them safely absorb possible voltage transients that may occasionally be applied from gate to source. In this respect the Zener voltage is appropriate to achieve an efficient and cost-effective intervention to protect the device's integrity. These integrated Zener diodes thus avoid the usage of external components.

## 4 Package mechanical data

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK ${ }^{\circledR}$ packages, depending on their level of environmental compliance. ECOPACK ${ }^{\circledR}$ specifications, grade definitions and product status are available at: www.st.com. ECOPACK ${ }^{\circledR}$ is an ST trademark.
