7.2 Storage

- a) The solderability of the external electrode may be deteriorated if packages are stored where they are exposed to high humidity. Package must be stored at 40°C or less and 70% RH or less.
- b) The solderability of the external electrode may be deteriorated if packages are stored where they are exposed to dust or harmful gas (e.g. HCl, sulfurous gas of H<sub>2</sub>S).
- c) Packaging material may be deformed if package are stored where they are exposed to heat of direct sunlight.
- d) The minimum package and polyethylene package should not be opened until the capacitors are used; once they were opened, use the capacitors as soon as possible.
- e) Solderability specified shall be guaranteed for 3 months from the date of delivery on condition that they are stored at the environment specified in **Clause 4**. For those parts, which passed more than 3 months shall be checked solder-ability before use.

7.3 Transportation

Package should not be destroyed or get wet.

7.4 Precautionary measures

- a) Put on electrostatic prevention to avoid ESD.
- b) Equipments involved in capacitor application (such as soldering tip and tester) should be well grounded.
- c) Avoid touching electrode directly by hand or metal (such as metal table).

7.5 Cautions for Using Tantalum Capacitor

7.5.1 Operating voltage

The ratio of operating voltage to rated voltage has a great influence on capacitor failures. Please take all specified reliabilities into account and derate operating voltage appropriately when a practical circuit is designed.

- a. The operating voltage of tantalum capacitors used in low impedance circuits, such as filters for power supplies (particularly switching power supplies), should be derated to less than one-third of rated voltage. In other case, keep the operating voltage below two thirds of rated voltage. Refer to **Fig.7.5-1** for detail:

Fig.7.5-1

- b. In low impedance circuits, connecting capacitors in parallel will increase the risk of the failure caused by DC surge current. Please pay attention to the electric charge in capacitor with parallel connection which can be discharged by other capacitors.
- c. Connecting a resistor in series with capacitor is suggested to alleviate the shock caused by excessive momentary current. Please connect a protecting resistor of 3Ω/V or higher in series with the capacitor to keep current below 300mA. If protecting resistors could not be applied; please make sure operating voltage is below one-third of rated voltage (**Fig.7.5-1**).

### 7.5.2 Reverse voltage

Since tantalum capacitor has polarity, do not apply a reverse voltage to it. Do not apply capacitor to a circuit which only has alternating current.

- ① If there is no alternation, applying a low reverse voltage which is listed below to capacitor in a short time is approved:
  - At 25°C:  $\leq 10\%U_R$  (rated voltage) or 1V (whichever is lower);
  - At 85°C:  $\leq 5\%U_R$  (rated voltage) or 0.5V (whichever is lower);
  - At 125°C: 1% of rated voltage, 0.1V for max.
- ① In principle, testing a circuit with tantalum capacitor or capacitor itself by using a resistor gear of millimeters in ignorance of polarity is forbidden.
- ② During measurement and application, if the tantalum capacitor is subjected to an undesirable reverse voltage due to carelessness, please dispose it, even if its electrical characteristics are still qualified.

### 7.5.3 Ripple voltage

Please use the capacitor within permissible ripple voltage.

- a. The sum of DC bias voltage and the maximum AC branch voltage should not exceed rated voltage during operation.
- b. The sum of negative peak AC value and DC bias voltage should not exceed the specified reverse voltage.
- c. Ripple current applied to capacitor will generate active power loss, which will raise the rate of the failure caused by heat due to self-heat generation of capacitor. Therefore, ripple current and permissible power loss must be in control.

### 7.5.4 Mounting

In mounting, if the capacitor has underwent excessive mechanical and thermal shock which may cause deterioration of electrical characteristics, open circuits and short circuits, please confirm the practical mounting conditions before usage.
