

SK6015 600mA High PSRR, Low Noise LDO

General Description

The SK6015 series are highly precise, low noise, positive voltage LDO regulators manufactured using CMOS processes. The series achieves high ripple rejection and low dropout and consists of a standard voltage source, an error correction, current limiter and a phase compensation circuit plus a driver transistor. External output feedback, customers can easily get the required voltage. In order to make the load current does not exceed the current capacity of the output transistor, built-in overcurrent protection, over temperature protection and short circuit protection. The internal op amp with advanced structure, the output capacitor can be omitted. The SK6015 series are available in SOT23-3, SOT23-5, DFN1×1-4, DFN2×2-6 package.

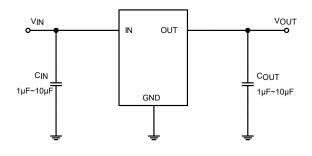

Features

- Programmable Output: Minimum can go to 0.8V
- Low Power Consumption: 50µA (Typ.) Low Voltage Drops: 0.15V@50mA (ADJ)
- Standby Mode: 0.1uA
- Low Temperature Coefficient
- **Active Discharge Function**
- High Ripple Rejection: 70dB@100Hz (Typ.)
- High Input Voltage (ADJ up to 8V)
- Output Voltage Accuracy: Tolerance ±2%
- Build-in Enable / Output Current Limit
- SOT23-3/SOT23-5/DFN1×1-4/DFN2×2-6 Package

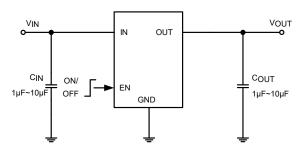

Applications

- Cellular Handsets
- Battery-Powere
- Wi-Fi Router
- Hand-Held Instruments
- Portable Information Application
- Adjustable power supply

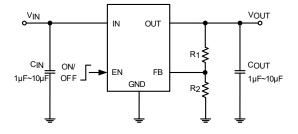

Typical Application Circuit

SOT23-3 Typical Application Circuit

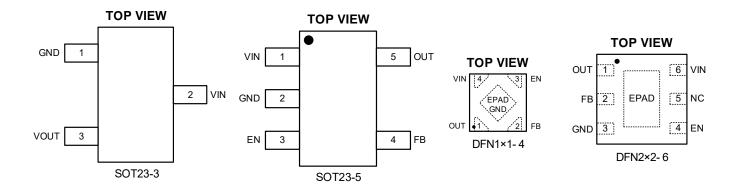

SOT23-5/DFN1×1-4 Typical Application Circuit

Typical Application Circuit with FB $V_{OUT}=0.8\times(1+R1/R2)$

Pin Configuration

Pin Description

SOT23-3 Pin No.	SOT23-5 Pin No.	DFN1×1 Pin No.	DFN2×2 Pin No.	Pin Name	Function
2	1	4	6	VIN	Input voltage pin for the regulator.
1	2	-	3	GND	Ground pin.
-	3	3	4	EN	Enable Control (Active high), Driving EN over 0.9 V turns on the regulator. Driving EN below 0.4V puts the regulator into shutdown mode.
-	-	-	5	NC	Not Connected.
-	4	2	2	FB	FB pin for adjustable output option
3	5	1	1	OUT	Output voltage pin for the regulator.
-	-	EPAD	EPAD	EPAD	Exposed pad should be connected directly to the GND pin.

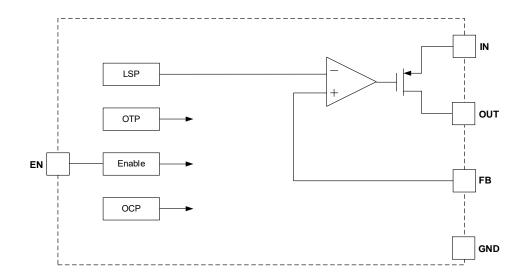

Ordering Information

Part Number	Package	Tape/Reel	
SK6015S3-XX	SOT23-3	3000	
SK6015S5-XX	SOT23-5	3000	
SK6015S5-ADJ	SOT23-5	3000	
SK6015D4-XX	DFN1x1-4	5000	
SK6015D4-ADJ	DFN1x1-4	10000	
SK6015D6-ADJ	DFN2x2-6	5000	

SK6015 devices are Pb-free and RoHS compliant.

Functional Block Diagram

Functional Block Diagram

Absolute Maximum Ratings (1) (2)

Item		Min	Max	Unit
V _{IN} voltage	SK6015	2.0	6.0	V
VIN VOICAGE	SK6015-ADJ	2.0	8.0	V
V _{OUT} voltage	SK6015	1.0	5	V
1001 10.1380	SK6015-ADJ	1.0	3.3	V
Output Current (3)	SK6015	500		mA
Output current (*)	SK6015-ADJ	600		mA
Power dissipation (4)		Internally Limi	ted	
Operating Ambient Temperature		-40	85	°C
Maximum junction temperature			150	°C
Storage temperature, T _{stg}		- 50	85	°C
Lead Temperature (Solo	dering, 10sec.)		260	°C

Note (1): Exceeding these ratings may damage the device.

Note (2): The device is not guaranteed to function outside of its operating conditions.

Note (3): $I_{OUT}=P_D/(V_{IN}-V_{OUT})$

Note (4): The maximum allowable power dissipation is a function of the maximum junction temperature, $T_{J(MAX)}$, the junction-to-ambient thermal resistance, $R_{\theta JA}$, and the ambient temperature, T_A . The maximum allowable power dissipation at any ambient temperature is calculated using: $P_{D(MAX)} = (T_{J(MAX)} - T_A)/R_{\theta JA}$. Exceeding the maximum allowable power dissipation causes excessive die temperature, and the regulator goes into thermal shutdown. Internal thermal shutdown circuitry protects the device from permanent damage. Thermal shutdown engages at $T_J = 155$ °C (typical) and disengages at $T_J = 140$ °C (typical).

Recommended Operating Conditions

Item	Min	Max	Unit
Operating junction temperature (1)	-40	125	°C
Operating temperature range	-40	85	°C
Input voltage V _{IN}	2	6.5	V
Output current(ADJ)	0	600	mA

Note (1): All limits specified at room temperature ($T_A = 25$ °C) unless otherwise specified. All room temperature limits are 100% production tested. All limits at temperature extremes are ensured through correlation using standard Statistical Quality Control (SQC) methods. All limits are used to calculate Average Outgoing Quality Level (AOQL).

Thermal Information

Item	Description	SOT23-5	DFN1×1-4	DFN2×2-6	Unit
$R_{\theta JA}$	Junction-to-ambient thermal resistance (1)(2)	230	220	96	°C/W
R _{0JC(top)}	Junction-to-case (top) thermal resistance	152	165	90	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	56	165	66	°C/W
ψл	Junction-to-top characterization parameter	31	5.5	3.2	°C/W
ψЈВ	Junction-to-board characterization parameter	55	164	66	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	131	41	°C/W

Note (1): The package thermal impedance is calculated in accordance to JESD 51-7.

Note (2): Thermal Resistances were simulated on a 4-layer, JEDEC board

Electrical Characteristics

 T_A = 25°C, unless otherwise noted.

Applications Information

Setting the Output Voltage

SK6015-ADJ require an input capacitor and an output capacitor. These components are critical to the performance of the device. The output voltage can be programmed by resistor divider.

$$V_{OUT} = V_{FB} \times \frac{R1 + R2}{R2}$$

V _{OUT} (V)	R1(KΩ)	R2(KΩ)	C _{IN} (μF)	C _{OUT} (μF)
1	25.00	100	1~10	1~10
1.05	31.25	100	1~10	1~10
1.2	50.00	100	1~10	1~10
1.5	87.50	100	1~10	1~10
1.8	125.00	100	1~10	1~10
2.5	212.50	100	1~10	1~10
2.8	250.00	100	1~10	1~10
3.3	312.50	100	1~10	1~10

Low ESR Capacitors

With the SK6015 series, a stable output voltage is achievable even if used with low ESR capacitors as a phase compensation circuit is built-in. In order to ensure the effectiveness of the phase compensation, we suggest that an output capacitor (C_{OUT}) is connected as close as possible to the output pin (V_{OUT}) and the GND pin. Please use an output capacitor with a capacitance value of 10uF. Also, please connect an input capacitor (C_{IN}) of 10uF between the V_{IN} pin and the GND pin in order to ensure a stable power input. Stable phase compensation may not be ensured if the capacitor runs out capacitance when depending on bias and temperature. In case the capacitor depends on the bias and temperature, please make sure the capacitor can ensure the actual capacitance.

Current Limiter, Short-Circuit Protection

The SK6015 series includes a combination of a fixed current limiter circuit & a feedback circuit, which aid the operations of the current limiter and circuit protection. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. As a result of this drop-in output voltage, the feedback circuit operates, output voltage drops further and output current decreases. When the output pin is shorted, a current of about 50mA flows.

EN pin

The IC's internal circuitry can be shutdown via the signal from the EN pin with the SK6015 series. Driving EN over 0.9 V turns on the regulator. Driving EN below 0.4 V puts the regulator into shutdown mode. The operational logic of the IC's EN pin is selectable. Note that as the standard SK6015 type's regulator is 'High Active/No Pull-Down', operations will become unstable with the EN pin open. Although the EN pin is equal to an inverter input with CMOS hysteresis, with either the pull-up or pull-down options, the EN pin input current will increase when the IC is in operation. We suggest that you use this IC with either a V_{IN} voltage or a GND

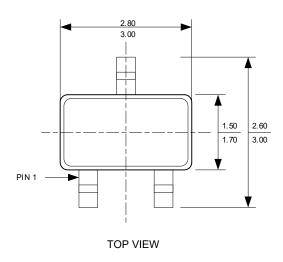

voltage input at the EN pin. If this IC is used with the correct specifications for the EN pin, the operational logic is fixed and the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry.

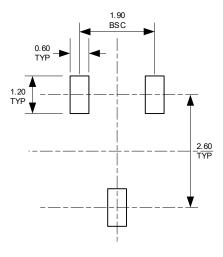

Notes on Use

- 1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
- 2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please keep the resistance low between V_{IN} and GND wiring in particular.
- 3. Please wire the input capacitor (C_{IN}) and the output capacitor (C_{OUT}) as close to the IC as possible.

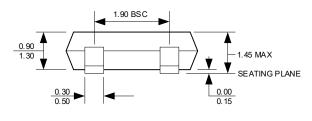

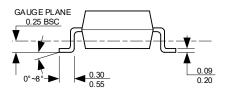

Packaging Information: SOT23-3
