

SK6215 16V, 500mA, Low Power Consumption LDO

GENERAL DESCRIPTION

The SK6215 series is a set of three-terminal, lowpower, high voltage regulators implemented inCMOS technology. The series features extremely low quiescent current which is typically 2.0 μ A.They allow input voltages as high as 16V. The device provides large current with a significantly small dropout voltage.

The SK6215 consists of a high-precision voltage reference, an error correction circuit, an over temperature protection circuit, and a current limited output driver. They are available with several fixed output voltages ranging from 2.5V to 5.0V.CMOS technology ensures low dropout voltage and low current consumption. Although designed primarily as fixed voltage regulators, these devices can be used with external components to generate variable voltages and currents.

The SK6215 regulators are available in standard SOT89-3L and SOT23-3L packages. Standard products are Pb-free and Halogen-free.
