# 1. ORDERING INFORMATION

## SCOPE

This specification describes SC series chip resistors with lead free terminations made by thick film process

## APPLICATIONS

All general purpose application

## FEATURES

- Halogen Free Epoxy
- RoHS compliant
- Products with lead free terminations meet RoHS requirements
- Pb-glass contained in electrodes, resistors element and glass are exempted by RoHS
- Reducing environmentally hazardous wastes
- High component and equipment reliability Saving of PCB space
- None forbidden-materials used in products/production

## NOTE

All our RSMD products meet RoHS compliant and Halogen Free

## ORDERING EXAMPLE

The ordering code for a SC0402 0.0625W chip resistor value 100KΩ with ±5% tolerance ,supplied in 7-inch paper tape reel of 10,000 unit per reel is : SC0402J1003F2ANRH

## ORDERING INFORMATION-GLOBAL PART NUMBER

Global part numbers are identified by the series, sizes, tolerance ,packing type, temperature coefficient, taping reel and resistance value.

### GLOBAL PART NUMBER

SC	XXXX	X	XXXX	X	XX	X	XH
	(1)	(2)	(3)	(4)	(5)	(6)	(7)

### (1) SIZE

0075/0100/0201/0402/0603/0805/1206/1210/2010/2512

### (2) TOLERANCE

B=±0.1%      D=±0.5%  
 F=±1.0%      J=±5.0%

### (3) RESISTANCE

There are 2-4digits indicated the resistance value.  
 Letter R/K/M is decimal point  
 Example:  
 9R76 = 9.76 Ω  
 9761 = 9760 Ω  
 1004 = 1,000,000 Ω

## Values of E3,E6,E12,E24 ,E48& E96

To simplify resistor manufacture, handling, purchase & electronic circuit design, resistor values are arranged into standard resistor values conforming to the E series. The different sets of standard resistor values are known by their E-series numbers: E3 has three resistors in each decade, E6 has six, E12 has twelve, and so forth.

### 3. CONSTRUCTION AND DIMENSION

#### CONSTRUCTION

The resistor is constructed on top of a high-grade ceramic body .Internal metal electrodes are added on each end to make the contacts to the thick film resistive element .The composition of the resistive element is a noble metal imbedded into a glass and covered by a second glass to prevent environmental influences .The resistor is laser trimmed to the rated resistance value .The resistor is covered with a protective epoxy coat, finally the two external termination (matte tin on Ni -barrier ) are added , as shown in Fig 1 .

## MOUNTING

Due to their rectangular shape and small dimensional tolerances, Surface Mounted Resistors are suitable for handling by automatic placement systems. Chip placement can be on ceramic substrates and printed-circuit boards (PCBs). Electrical connection to the circuit is by wave, vapour phase or infrared soldering. The end terminations guarantee a reliable contact and the protective coating enables 'face down' mounting.

The laws of heat conduction, convection and radiation determine the temperature rise in a resistor owing to power dissipation. The maximum body temperature usually occurs in the middle of the resistor and is called the hot-spot temperature. The hot-spot temperature depends on the ambient temperature and the dissipated power. This is described in the data sheet under the chapter heading "Functional description".

The hot-spot temperature is important for mounting because the connections to the chip resistors will reach a temperature close to the hot-spot temperature. Heat conducted by the connections must not reach the melting point of the solder at the

junctions. Therefore a maximum solder joint temperature of 110°C is advised.

The ambient temperature on large or very dense printed-circuit boards (PCBs) is influenced by the dissipated power. The ambient temperature will again influence the hot-spot temperature. Therefore, the packing density that is allowed on the PCB is influenced by the dissipated power.

### EXAMPLE OF MOUNTING EFFECTS

Assume that the maximum temperature of a PCB is 95°C and the ambient temperature is 50°C. In this case the maximum temperature rise that may be allowed is 45°C.

In the graph (see Fig.5), this point is found by drawing the line from point A (PCB = 95°C) to point B (T<sub>amb</sub> = 50°C) and from here to the left axis.

To find the maximum packing density, this horizontal line is extended until it intersects with the curve 0.125 W (point C). The maximum packing density, 19 units/50 × 50 mm<sup>2</sup> (point D), is found on the horizontal axis.

Fig5: PCB temperature as a function of applied power, mounting density ambient temperature

## SOLDERING CONDITIONS

The lead free Surface Mount Resistors are able to stand the reflow soldering conditions as below:

- Temperature: above 220 °C
- Endurance: 95 to 120 seconds
- Cycles: 3 times The test of "soldering heat resistance" is carried out in

accordance with the schedule of "MIL-STD-202G-method 210F", "The robust construction of chip resistors allows them to be completely immersed in a solder bath of 260 °C for 10 seconds". Therefore, it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse (mixed PCBs).

Surface Mount Resistors are tested for solder ability at 245 °C during 2 seconds. The test condition for no leaching is 260 °C for 30 seconds. Typical examples of soldering processes that provide reliable joints without any damage, the recommended soldering profiles referring to "IEC 61760-1" are given in Figs 6, 7 and 8.

**NOTE**

1. For size 0201, the typical value of thickness (excluding cover tape) is 0.42 mm for paper tape and 0.33 mm for PE tape.
2. M is reversed type.
3. For size 1206, the typical value of thickness ( excluding cover tape) is 0.75±0.1.

**TESTS AND REQUIREMENTS**

**ENVIRONMENTAL CONSIDERATIONS**

- Cover tape, carrier tape and reel do not contain environmentally harmful PVC materials.
- Cover tape and reel are antistatic.
- Because the carrier tape is made of polycarbonate, a homogeneous material (mono-plastic), it is ideally suited for recycling
- Compared to other PVC-free materials polycarbonate shows excellent stiffness and very little deformation with temperature.

## LEADER/TRAILER TAPE SPECIFICATION

Fig11: Leader/trailer tape

## TAPING REQUIREMENTS

- Resistance side faces up.
- Component is free and not sticking to top and/or bottom tape.
- Component should be easy to remove from carrier tape and the chip cavity should have no mechanical damage

## PEEL-OFF FORCE

- Peel-off forces of both paper/PE and embossed/blister tapes are in accordance with "IEC 60286-3" ; that is, at a peel-off speed of  $300 \pm 10$  mm/minute, 0.1 N to 1.0 N for 8 mm tape and 0.1 N to 1.3 N for tape larger than 8 mm. The peel-off angle should be between  $165^\circ$  and  $180^\circ$ .

### TAPE AND REEL SPECIFICATIONS

All tape and reel specifications are in accordance with "IEC 60286-3". Basic dimensions are given in Figs 1, 2 and 5, and Tables 1, 2 and 3.

#### PAPER/PE TAPE

##### ADVANTAGE - PE TAP

- Better anti-moisture
- Less fiber
- Meet "ISO 14000" environmental regulation

##### MATERIAL CHARACTERISTIC - PE TAPE

- PE is a polymer material commonly used for food containers, plastic bags and toys, so is safe for human beings. In addition, it is recyclable.
- Conform to "ISO14000" environmental packing and American F.D.A restraint regulations
