General Description

These enhancement-mode (normally-off) transistors utilize a lateral MOS structure and Supertex's well-proven silicon-gate manufacturing process. This combination produces devices with the power handling capabilities of bipolar transistors and with the high input impedance and negative temperature coefficient inherent in MOS devices.

Characteristic of all MOS structures, these devices are free from thermal runaway and thermally induced secondary breakdown. The low threshold voltage and low on-resistance characteristics are ideally suited for hand held, battery operated applications.

Absolute Maximum Ratings

Parameter	Value
Drain-to-source voltage	BV _{DSS}
Drain-to-gate voltage	BV _{DGS}
Gate-to-source voltage	±10V
Operating and storage temperature	-55°C to +150°C
Soldering temperature*	+300°C

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

Distance of 1.6mm from case for 10 seconds.
