

## Ordering Information

Part Number	Package	Packing
MD0105K6-G	18-Lead DFN (5x5)	490/Tray
MD0105K6-G M932	18-Lead DFN (5x5)	2500/Reel

ESD Sensitive Device

## Absolute Maximum Ratings

Parameter	Value
$V_A - V_B$ , Differential voltage drop	0 to $\pm 140V$
Maximum junction temperature	$+125^{\circ}C$
Storage temperature range	$-65^{\circ}C$ to $150^{\circ}C$
Power dissipation, 18-Lead DFN <sup>2</sup>	1.6W

### Notes:

1. Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

2. Mounted on FR4 board, 25mm x 25mm x 1.57mm

## Typical Thermal Resistance

Package	$\theta_{ja}$
18-Lead DFN	$30^{\circ}C/W$

## Electrical Characteristics

( $T_j = 25^{\circ}C$ , unless otherwise specified)

Sym	Parameter	Min	Typ	Max	Units	Conditions
$V_{A-B}$	Max. differential input voltage from A to B	$\pm 130$	-	-	V	$I_{A-B} = \pm 1.0mA$
$R_{SW}$	Switch ON resistance from A to B	-	15	-	$\Omega$	$I_{A-B} = \pm 5.0mA$
$V_{TRIP}$	$V_{A-B}$ trip point to turn off	-	$\pm 1.0$	$\pm 2.0$	V	---
$V_{OFF}$	Switch turn off voltage	-	$\pm 2.0$	-	V	$I_{A-B} = \pm 1.0mA$
$I_{A-B(OFF)}$	Switch off current	-	$\pm 200$	$\pm 300$	$\mu A$	$V_{A-B} = \pm 130V$
$I_{PEAK}$	Peak switching current	-	$\pm 60$	-	mA	---
$T_{OFF}$	Turn off time	-	-	20	ns	---
$T_{ON}$	Turn on time	-	-	20	ns	---
$C_{SW(ON)}$	Switch ON capacitance from A to B	-	21	-	pF	SW = ON
$C_{SW(OFF)}$	Switch OFF capacitance from A to B	-	15	-	pF	$V_{SW} = 25V$
BW	Small signal bandwidth	-	100	-	MHz	$R_{LOAD} = 50\Omega$
$T_j$	Operating junction temperature	-40	-	+125	$^{\circ}C$	---

## Product Marking

L = Lot Number  
YY = Last Digit of Year Sealed  
WW = Code for Week Sealed  
A = Assembler ID  
C = Country of Origin  
— = "Green" Packaging

### 18-Lead DFN

Package may or may not include the following marks: Si or

## Block Diagram

## Typical I-V Characteristics

## Functional Description

The Supertex MD0105 can be considered as a normally closed switch controlled by a switch control (please refer to the block diagram). The switch control monitors the voltage drop across terminals A and B. If the voltage difference is greater than  $\pm 2.0V$ , the T/R switch will start to open. Once in the open state, there is a small amount of current flowing through the T/R switch,  $200\mu A$ , to detect if the high voltage is still present or not.

The T/R switch will not close until the voltage across terminal A and B drops below  $\pm 2.0V$ . A pair of back-to-back diodes from the receive side of the switch to ground is needed to complete the circuit and to allow the initial peak current (about  $60mA$ ) to flow through the switch so it can drop  $\pm 2.0V$ . If the diodes are not present, then there is no current path

and the voltage drop across terminal A and B will be less than  $\pm 2.0V$ , so the switch will remain in the closed position.

The MD0105 does not require any power supply. There are only two active pins; one connects to the transmitter side, one connects to the receiver side.

## On Resistance

When the voltage across terminals A and B are below  $\pm 2.0V$ , the switch is in the receive mode and the  $R_{ON}$  is typically  $15\Omega$ . Once the voltage across the terminals A and B is greater than  $\pm 2.0V$ , the switch is in the transmit mode and blocking the high voltage pulses from passing through to the receiver and damaging it.

## Switch Capacitance

The typical switch On capacitance ( $C_{SW(ON)}$ ) is 21pF. This is measured from A to B when the switch is ON. The switch OFF capacitance is a function of the voltage across the T/R switch. The  $C_{SW(OFF)}$  is about 12 to 19 pF for 10V to 130V of the transmit voltage.

## $T_{ON}$ and $T_{OFF}$ Time

The  $T_{ON}$  and  $T_{OFF}$  of the MD0105 are less than 20ns, which provide a fast switch between the transmit mode and the receive mode. The  $T_{ON}$  and  $T_{OFF}$  are input rise/fall time dependent. The T/R switch turns ON and OFF faster when the rise and fall times of the transmit pulse are faster. On the other hand, the switch turns ON and OFF slower if the rise and fall times of the transmit pulse are slower.

## Pin Description

Pad	Name	Description
1	NC	No internal connection
2	A1	Switch terminal A1
3	NC	No internal connection
4	A2	Switch terminal A2
5	NC	No internal connection
6	A3	Switch terminal A3
7	NC	No internal connection
8	A4	Switch terminal A4
9	NC	No internal connection

Pad	Name	Description
10	NC	No internal connection
11	B4	Switch terminal B4
12	NC	No internal connection
13	B3	Switch terminal B3
14	NC	No internal connection
15	B2	Switch terminal B2
16	NC	No internal connection
17	B1	Switch terminal B1
18	NC	No internal connection
Center Tab	---	Connect to ground

# 18-Lead DFN Package Outline (K6)

5.00x5.00mm body, 1.00mm height (max), 0.50mm pitch

**Notes:**

1. A Pin 1 identifier must be located in the index area indicated. The Pin 1 identifier can be: a molded mark/identifier; an embedded metal marker; or a printed indicator.
2. Depending on the method of manufacturing, a maximum of 0.15mm pullback (L1) may be present.
3. The inner tip of the lead may be either rounded or square.
