

SurgeArresters

陶瓷气体放电管

X5 Series

Schematic Symbol

Gas discharge Tubes (GDT) are classical components for protecting the installations of the telecommunications. It is essential that IT and telecommunications systems -with their high-grade but sensitive electronic circuits - be protected by arresters. They are thus fitted at the input of the power supply system together with varistors and at the connection points to telecommunication lines. They have become equally indispensable for protecting base stations in mobile telephone systems as well as extensive cable television (CATV) networks with their repeaters and distribution systems.

These protective components are also indispensable in other sectors, In AC power transmission systems, they are often used with current-limiting varistors, In customer premises equipment such as DSL modems, WLAN routers, TV sets and cable modems In air-conditioning equipment, the integral black-box concept offers graduated protection by combining arresters with varistors, PTC, diodes and inductor.

Dull Tin-plated

Temperature

Weight

Agency Approvals

- Non-Radioactive
- RoHS compliant u
- u Low insertion loss
- Excellent response to fast rising transients u
- Ultra low capacitance u
- 5KA surge capability tested with 8/20µs pulse as defined by IEC 61000-4-5

Applications

- Communication equipment u Broadband equipment
- CATV equipment ADSL equipment, including ADSL2+ u u
- Test equipment u u XDSL equipment
 - Data lines u Satellite and CATV equipment
- u Power supplies Consumer electronics

Part Numbering

Series:

X5 -

Telecom SLIC protection

DCLineVoltage: 90X=90V 230X=230V

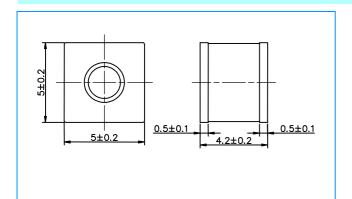

OX SMDT

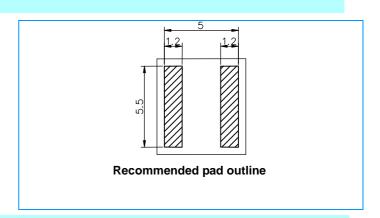

Package: SMD=Cylinder No Lead

SMDT=2-SMD Cylinder Square End

X5系列: Φ5*5*4.2 S5系列: \$5*5

Device Dimensions (Unit: mm)

Electrical Characteristics

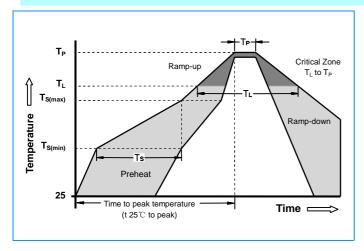

| Part Number | DC Spark-over Voltage | Maximum Impulse Spark-over Voltage | | Minimum Insulation Resistance | Maximum Capacitance | Arc Voltage | Service Life | | | |
|-------------|-----------------------------|---|---------|-------------------------------------|------------------------|----------------|--|--|--|-------------------------|
| | | | | | | | Nominal Impulse Discharge Current | Max Impulse Discharge Current | Nominal Alternating Discharge Current | Impulse Life |
| | @100V/S | @100V/μs | @1KV/μs | | @1MHz | @1A | @8/20μs ±5 times | @8/20μs 1 time | @50Hz 1 Sec 10 times | @10/1000μs 300 times |
| X5-90XSMDT | 90V±20% | 500V | 650V | 1 GΩ (at 50V DC) | 1.0pF | ~15V | 5KA | 10KA | 5A | 100A |
| X5-150XSMDT | 150V±20% | 500V | 650V | 1 GΩ (at 50V DC) | 1.0pF | ~20V | 5KA | 10KA | 5A | 100A |
| X5-200XSMDT | 200V±20% | 500V | 650V | 1 GΩ (at 100V DC) | 1.0pF | ~20V | 5KA | 10KA | 5A | 100A |
| X5-230XSMDT | 230V±20% | 600V | 700V | 1 GΩ (at 100V DC) | 1.0pF | ~20V | 5KA | 10KA | 5A | 100A |

- 1. Terms in accordance with ITU-T K.12 and GB/T 9043-2008
- 2. At delivery AQL 0.65 level $\,\mathrm{II}\,$, DIN ISO 2859

Electrical Rating

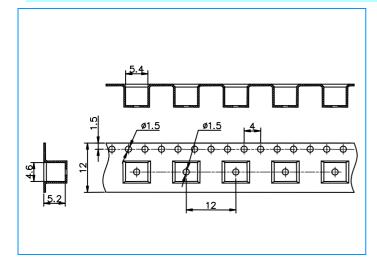

| Item | Test Condition / Description | Requirement |
|--|--|-----------------------------------|
| DC Spark-over Voltage Impulse Spark-over Voltage Insulation Resistance | The voltage is measured with a slowly rate of rise dv / dt=100V/s The maximum impulse spark-over voltage is measured with a rise time of dv / dt=100V//µs or 1KV/µs The resistance of gas tube shall be measured each terminal each other terminal, please see above spec. | |
| Capacitance | The capacitance of gas tube shall be measured each terminal to each other terminal. Test frequency :1MHz | |
| Nominal Impulse Discharge Current Nominal Alternating | The maximum current applying a waveform of 8/20µs that can be applied across the terminals of the gas tube. One hour after the test is completed, re-testing of the DC spark-over voltage does not exceed ±30% of the nominal DC spark-over voltage. Dwell time between pulses is 3 minutes. Crest value Time Impulse Width Rated RMS value of AC current at 50Hz, 1 sec. 10 times. Intervals: 3min. The DC spark-over voltage. | To meet the specified value |
| Nominal Alternating Discharge Current | Rated RMS value of AC current at 50Hz, 1 sec. 10 times. Intervals: 3min. The DC spark-over voltage does not exceed $\pm 30\%$ of the nominal DC spark-over voltage. IR > 10^8 ohms. | |

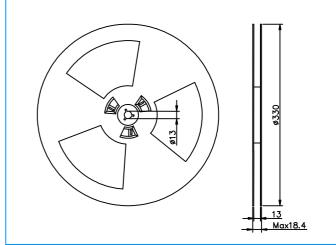

Recommended soldering profile

| Reflow Co | ndition | Pb - Free assembly | | |
|---------------------------|---|--------------------|--|--|
| Pre Heat | -Temperature Min (T _{s(min)}) | 150°C | | |
| | -Temperature Max (T _{s(max)}) | 200°C | | |
| | - Time (min to max) (t _s) | 60 -180 Seconds | | |
| Average ra | amp up rate (Liquidus Temp T _L) | 3°C/second max | | |
| T _{S(max)} to Ti | L - Ramp-up Rate | 5°C/second max | | |
| Reflow | - Temperature (T _L) (Liquidus) | 217°C | | |
| | - Time (min to max) (t _s) | 60 -150 Seconds | | |
| Peak Temp | perature (T _P) | 260 +0/-5°C | | |
| Time with | thin 5°C of actual peak ire (t _p) | 10 - 30 Seconds | | |

Tape and Reel Dimensions Unit: mm

Cautions and warnings

- **u** Gas discharge tubes (GDT) must not be operated directly in power supply networks.
- u Gas discharge tubes (GDT) may become hot in case of longer periods of current stress (danger of burning).
- Gas discharge tubes (GDT) may be used only within their specified values. In the event of overload, the head contacts may fail or the component may be destroyed.
- Damaged Gas discharge tubes (GDT) must not be re-used.
