1 – Specifications –

1.1 – Scope –

This specification covers the Paint Insulated Fixed Metal Film Resistors.

For resistance values below 10 ohms, it shall only be applied to Nickel Metal Film

1.2 – Type designation –

Types are designated as follows.

RN	16	T2	1002	F
Type	Power Rating	Packaging Forming	Nominal Value of Resistance	Resistance Tolerance
RN : Metal Film Resistors	16:1/6W, 1/8W 25:1/4W 50:1/2W 1W:1W 2W:2W 25S:1/4WS 50S:1/2WS	P : P-Type Bulk T2 : 26m/m Taping T5 : 52m/m Taping	1853 : 185KΩ 1000 : 100Ω 1001 : 1KΩ 1002 : 10KΩ 1003 : 100KΩ 1004 : 1M	B : 0.1% C : 0.25% D : 0.5% F : 1%

1.3 – Rating –

The ratings of resistors are described in the following Sections. The rating of each type of resistor is indicated in each associated Tables.

-Table.1 Rating Table-

Items	Contents						
Type	1/6W	1/4W	1/2W	1/4WS	1/2WS	1WS	2WS
Rated Wattage	1/6W	1/4W	1/2W	1/4W	1/2W	1W	2W

1.3.1 –Rated Wattage–

Rated Wattage is the maximum continuous power applicable at operating temperature range. However, for the temperature above 70°C, derating should be applied as Fig.1.

-Fig.1 Derating curve-

1.3.2 –Rated Voltage–

The rated voltage is denoted as D.C. or rms A.C. voltage which is calculated according to the following formula. However, it is limited to the maximum applicable voltage.

$$E = \sqrt{P \times R}$$

E: Rated voltage (V)

P: Rated wattage (W)

R: Rated Resistance (Ω)

1.3.3 –Rated Resistance–

- (1). The rated resistance is specified in accordance with the E24 Series Numbers as shown in Table2.
- (2). The manufacturing resistance range is shown in each associated rating Tables.
- (3). The resistance tolerance is shown in each associated rating Tables.

-Table.2 E-24 Series resistance Value-

5 –Axial Taping Specification–

5.1 –Application–

This specification covers axial taping of paint insulated fixed metal film resistors

5.2 –Taping Operation–

5.2.1 Dimensions are shown in Fig 2. and Fig 3.

5.2.2 Tape material

Tapes are paper based press adhesive tapes with the following requirements.

Width	Thickness	Adhesive Power	Pull Strength	Elongation
6.0 ± 0.5 mm	0.15 ± 0.05mm	1700g /25mm wide Min.	20.4g / 25mm wide Min.	5% Max.

5.2.3 Taping Operation

5.2.3.1 Color code orientation is not specified.

5.2.3.2 No drop out is permissible.

5.2.3.3 Adhesion length be min. 3.0mm

-FIG.2 -

5.2.3.4 Tape splicing be done with rein forcing tapes attached from both side.(see Fig. 3)

-FIG.3 -

5.2.3.5 Taping end shall have min. 50mm of leading tape.

5.3 –Taped Packing–

5.3.1 Taped products are folded into packing boxes.(see Fig 4)

5.3.2 Dimensions of boxes are shown in Table 4.

5.3.3 Flap of the box is taped to fix.

9 Recommend having the tin condition:

9.1. Weld the homework in crest

Whether preheat temperature. 110°C max

Time of preheating: 60sec~120sec

The temperature of the homework / time: 260°C / 10sec 1 second or 5sec two times

(Weld the curve and see and leave pursuing in relevant crests)

-FIG.8 Temperature profile-

9.2. Soldering tin homework of the craft:

Soldering tin temperature: 350°C max

Soldering tin time: 3sec max

10. — Notice —

(1) Storage of resistors

Preferable storage conditions are follows: Temperature range is from 0°C to 30°C and the relative humidity (RH) is less than 65%. High temperature and humidity will change the resistance and cause poor solderability. Storage duration should be less than 2 year for the best performance.

(2) Loading conditions

Resistance change is highly dependent upon the loading conditions, such as temperature and load ratio. For long time stability, the derated conditions shall be applied. The resistor is flameproof, but care should be taken for safety. Safety resistors are available upon inquiry.

(3) Resistor insertion

Cares to be taken at the insertion time in order to prevent from the damages on coating and lead wires. Such a damages will cause the malfunctions. To bend the lead wires and keep an adequate radius is required to prevent the damages from welding points. Soldering heat applied should be minimize

(4) Moisture-proof, damp-proof, and sour-proof, to avoid the sun light directly in a long time.

(5) Open the resistor or box, the resistors cannot expose in the air for a long time. To avoid electrode and lead wire attached the substances or oxidize problem, cause the electrode and lead wire tin-plated NG.

(6) A pile of the resistors, the pressure cannot exceed 7 KG.

(7) When the goods used a adhesive tape or colors, it can use many colors excluding red and yellow color. (except color code).

(8) The components made by TAI have been widely applied in the field of home appliance, automotive appliance, telecommunication, data...etc..

(9) Specification given herein may be changed at any time without prior notice please confirm TAI before you order or use.
