APPLICATIONS INFORMATION

- \diamondsuit Designed to protect one data, I/O, or power supply line
- \diamondsuit Designed to protect sensitive electronics from damage or latch-up due to ESD
- \diamondsuit Designed to replace multilayer varistors (MLVs) in portable applications
- \diamondsuit Features large cross-sectional area junctions for conducting high transient currents
- \diamond Offers superior electrical characteristics such as lower clamping voltage and no device degradation when compared to MLVs
- \diamond The combination of small size and high ESD surge capability makes them ideal for use in portable applications

CIRCUIT BOARD LAYOUT RECOMMENDATIONS

Good circuit board layout is critical for the suppression of ESD induced transients

- \diamond Place the ESD Protection Diode near the input terminals or connectors to restrict transient coupling
- \Diamond Minimize the path length between the ESD Protection Diode and the protected line
- \diamondsuit Minimize all conductive loops including power and ground loops
- \diamondsuit The ESD transient return path to ground should be kept as short as possible
- \bigcirc Never run critical signals near board edges
- \bigcirc Use ground planes whenever possible
