## 7. Storage conditions

Precautions	<ul style="list-style-type: none"><li>◆ Storage<ol style="list-style-type: none"><li>1. To maintain the solderability of terminal electrodes and to keep the packing material in good condition, temperature and humidity in the storage area should be controlled.<ul style="list-style-type: none"><li>• Recommended conditions<ul style="list-style-type: none"><li>Ambient temperature : 0~40°C</li><li>Humidity : Below 70% RH</li></ul></li><li>• The ambient temperature must be kept below 30°C. Even under ideal storage conditions, solderability of products electrodes may decrease as time passes. For this reason, product should be used within 6 months from the time of delivery. In case of storage over 6 months, solderability shall be checked before actual usage.</li></ul></li></ol></li></ul>
Technical considerations	<ul style="list-style-type: none"><li>◆ Storage<ol style="list-style-type: none"><li>1. Under a high temperature and humidity environment, problems such as reduced solderability caused by oxidation of terminal electrodes and deterioration of taping/packaging materials may take place.</li></ol></li></ul>
