ELNA CO., LTD.

CAT.No.2021/2022E

Please read this notice before using the ELNA products.

REMINDERS

Product Information in this Catalog

Product information in this catalog is as of December 2020. All of the contents specified herein and production status of the products listed in this catalog are subject to change without notice due to technical improvement of our products, etc. Therefore, please check for the latest information carefully before practical application or use of our products.

Please note that ELNA shall not be in any way responsible for any damages and defects in products or equipment incorporating our products, which are caused under the conditions other than those specified in this catalog or individual product specification sheets.

Approval of Product Specifications

Please contact ELNA for further details of product specifications as the individual product specification sheets are available. When using our products, please be sure to approve our product specifications or make a written agreement on the product specification with ELNA in advance.

Pre-Evaluation in the Actual Equipment and Conditions

Please conduct validation and verification of our products in actual conditions of mounting and operating environment before using our products.

Limited Application

1. Equipment Intended for Use

The products listed in this catalog are intended for general-purpose and standard use in general electronic equipment (e.g., AV equipment, OA equipment, home electric appliances, office equipment, information and communication equipment including, without limitation, mobile phone, and PC) and other equipment specified in this catalog or the individual product specification sheets.

ELNA has the line-up of the products intended for use in automotive electronic equipment, telecommunications infrastructure and industrial equipment, or medical devices classified as GHTF Classes A to C (Japan Classes I to III). Therefore, when using our products for these equipment, please check available applications specified in this catalog or the individual product specification sheets and use the corresponding products.

2. Equipment Requiring Inquiry

Please be sure to contact ELNA for further information before using the products listed in this catalog for the following equipment (excluding intended equipment as specified in this catalog or the individual product specification sheets) which may cause loss of human life, bodily injury, serious property damage and/or serious public impact due to a failure or defect of the products and/or malfunction attributed thereto.

- (1) Transportation equipment (automotive powertrain control system, train control system, and ship control system, etc.)
- (2) Traffic signal equipment
- (3) Disaster prevention equipment, crime prevention equipment
- (4) Medical devices classified as GHTF Class C (Japan Class III)
- (5) Highly public information network equipment, data-processing equipment (telephone exchange, and base station, etc.)
- (6) Any other equipment requiring high levels of quality and/or reliability equal to the equipment listed above

3. Equipment Prohibited for Use

Please do not incorporate our products into the following equipment requiring extremely high levels of safety and/or reliability.

- (1) Aerospace equipment (artificial satellite, rocket, etc.)
- (2) Aviation equipment *¹
- (3) Medical devices classified as GHTF Class D (Japan Class IV), implantable medical devices *²

- (4) Power generation control equipment (nuclear power, hydroelectric power, thermal power plant control system, etc.)
- (5) Undersea equipment (submarine repeating equipment, underwater work equipment, etc.)
- (6) Military equipment
- (7) Any other equipment requiring extremely high levels of safety and/or reliability equal to the equipment listed above

*Notes:

1. There is a possibility that our products can be used only for aviation equipment that does not directly affect the safe operation of aircraft (e.g., in-flight entertainment, cabin light, electric seat, cooking equipment) if such use meets requirements specified separately by ELNA. Please be sure to contact ELNA for further information before using our products for such aviation equipment.
2. Implantable medical devices contain not only internal unit which is implanted in a body, but also external unit which is connected to the internal unit.

4. Limitation of Liability

Please note that unless you obtain prior written consent of ELNA, ELNA shall not be in any way responsible for any damages incurred by you or third parties arising from use of the products listed in this catalog for any equipment that is not intended for use by ELNA, or any equipment requiring inquiry to ELNA or prohibited for use by ELNA as described above.

Safety Design

When using our products for high safety and/or reliability-required equipment or circuits, please fully perform safety and/or reliability evaluation. In addition, please install (i) systems equipped with a protection circuit and a protection device and/or (ii) systems equipped with a redundant circuit or other system to prevent an unsafe status in the event of a single fault for a failsafe design to ensure safety.

Intellectual Property Rights

Information contained in this catalog is intended to convey examples of typical performances and/or applications of our products and is not intended to make any warranty with respect to the intellectual property rights or any other related rights of ELNA or any third parties nor grant any license under such rights.

Limited Warranty

Please note that the scope of warranty for our products is limited to the delivered our products themselves and ELNA shall not be in any way responsible for any damages resulting from a failure or defect in our products. Notwithstanding the foregoing, if there is a written agreement (e.g., supply and purchase agreement, quality assurance agreement) signed by ELNA and your company, ELNA will warrant our products in accordance with such agreement.

ELNA's Official Sales Channel

The contents of this catalog are applicable to our products which are purchased from our sales offices or authorized distributors (hereinafter "ELNA's official sales channel"). Please note that the contents of this catalog are not applicable to our products purchased from any seller other than ELNA's official sales channel.

Caution for Export

Some of our products listed in this catalog may require specific procedures for export according to "U.S. Export Administration Regulations", "Foreign Exchange and Foreign Trade Control Law" of Japan, and other applicable regulations. Should you have any questions on this matter, please contact our sales staff.

■ **“GREEN CAP”**

“GREEN CAP”, ELNA considers the global environment and it is a product that doesn't use the hazardous substance and “Lead Free” in the plating of terminals and outer Sleeves.
 The product in this catalog is 'GREEN CAP'.

The hazardous substance is
 Cadmium and its compounds, Lead and its compounds
 Hexavalent chromium compounds, Mercury and its compounds
 PBB, PBDE : Specified bromine-based flame retardants
 DEHP : Di(2-ethylhexyl)phthalate, BBP : Bis(butylbenzyl) phthalate
 DBP : Dibutyl phthalate, DIBP : Diisobutyl phthalate

■ **Regarding to various environmental Regulations**

It suits with the following EU regulations.

- End-of-Life Vehicle Directive
- Restriction of the Use of Certain Hazardous Substances In Electrical and Electronic Equipment.
- Waste Electrical and Electronic Equipment.

etc.

For details, please check our website. (<http://www.ena.co.jp/en/company/environment/law.html>)

If you need “Halogen-Free” products, please consult with us.

Terminal area plating material and sleeve material

● **Aluminum (Polymer hybrid,Conductive Polymer Solid Electrolyte) electrolytic capacitors**

| Category | | Terminal area plating | Plating thickness | Sleeve |
|--------------------|------------------------------------|-----------------------|-------------------|----------------------|
| SMD (Chip type) | φ 3 to 6.3 | Sn-Bi | 12μm | Sleeve less |
| | φ 8,10 | Sn-Bi | 12μm | Sleeve less (or PET) |
| | φ 12.5 | Sn 100% | 12μm | Sleeve less (or PET) |
| | φ 16 to 18 | Sn 100% | 12μm | Sleeve less |
| | Supplementary terminal of RT* type | Sn 100% | 12μm | Sleeve less (or PET) |
| Lead terminal | | Sn 100% | 12μm | Sleeve less (or PET) |
| Snap-in | | Sn 100% | 12μm | PET |
| Screw terminal | | — | | PET |

● **Electric double layer capacitors**

| Category | | Terminal area plating | Plating thickness | Sleeve | |
|-------------------|------------------|-----------------------|-------------------|--------|-------------|
| Coin cell | SMD | Single cell | Sn 100% or Sn+Cu | 5μm | Sleeve less |
| | | Piled cell | Sn 100% | 5μm | PET |
| | Lead type | Sn 100% | 5μm | PET | |
| Large capacitance | Lead terminal | Sn 100% | 12μm | PET | |
| | Snap-in terminal | Sn 100% | 12μm | PET | |

Note : Sn : Tin Bi : Bismuth Cu : Copper

Please inquire when hoping excluding the above-mentioned terminal plating and sleeve.

NOTE : Design, Specifications are subject to change without notice.
 It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

■ **About the Sn whisker**

1. Sn whisker-generating mechanism on the lead wire

On the surface of the lead wire, Sn and aluminum will get mixed instead of getting dissolved.

The surface condition is complex, aluminum will expand due to the heat and humid causing the oxidation and hydration. This reaction will cause the inner stress and influence the development of the whisker.

2. Generation control of the Sn whisker

In the past, Sn whisker was reduced by adding a lead(Pb). Aluminum electrolytic capacitor was also using the Sn-plate with Pb on the lead wire.

But due to environmental regulation such as the “ELV” and “RoHS”, Pb was strictly prohibited since 2000.

Lead wire not containing the Pb was used, which caused the Sn whisker problem to happen again.

Since Sn whisker is influenced by the mixture of aluminum, method of reducing the aluminum on the welding surface was to clean the lead terminal using the alkali.

However since the welding area of the large case size is larger compared to the small ones, whisker will generate even if it is cleaned by alkali. This whisker will scatter outside of the capacitor and potentially cause the short-circuit. Countermeasure of keeping the whisker inside the capacitor is being discussed.

3. Prevention of scattering of Sn whisker

In the past Sn-plate with Pb was used and recently plate with Bi is being introduced to prevent the whisker from generating. However the whisker will still generate under the temperature and moisture condition.

Therefore, the current method of preventing the whisker will not completely prevent the whisker from generating.

In our company, we are developing and supplying products with design of preventing the whisker from scattering outside the capacitor.

This design corresponds to series such as the RJD and RJE for 105°C use, RJK, RKD and RPK for 125°C use.

If it is required for the other series, please feel free to make an inquiry.

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Ordering Information

Please order by the multiples of the minimum order quantity (MOQ).

It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Systematized Classification of Aluminum Electrolytic Capacitors

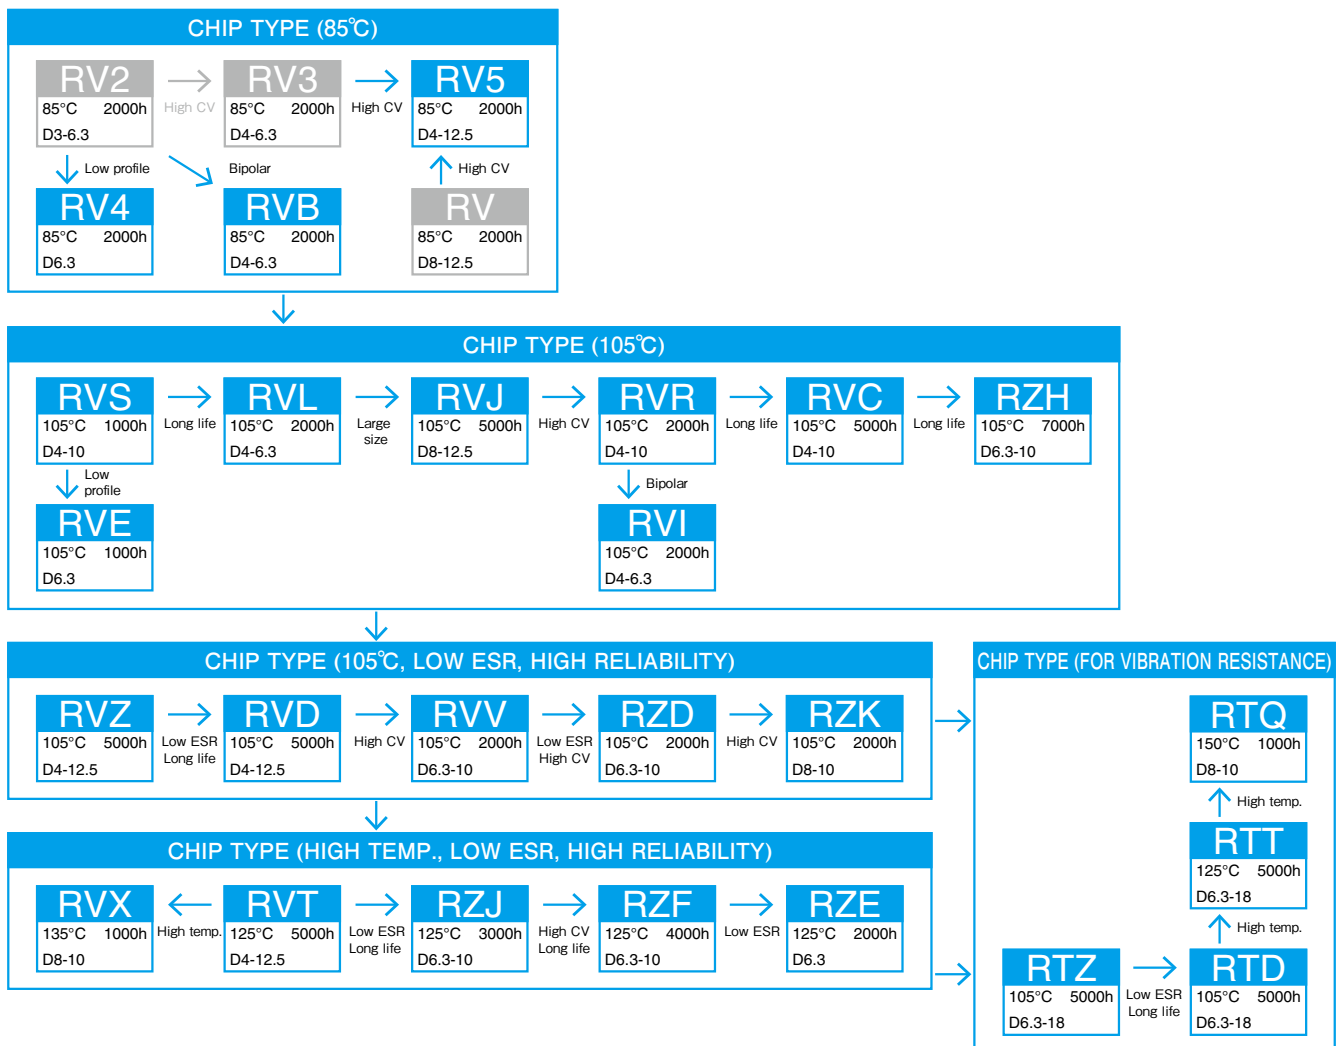

Conductive Polymer Hybrid Aluminum Electrolytic Capacitors

Aluminum Electrolytic Capacitors with Conductive Polymer Solid Electrolyte

Chip Type Aluminum Electrolytic Capacitors

NOTE : Design, Specifications are subject to change without notice. It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

■ Systematized Classification of Aluminum Electrolytic Capacitors

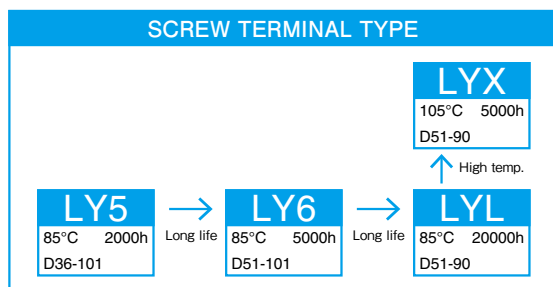

● Miniature Aluminum Electrolytic Capacitors

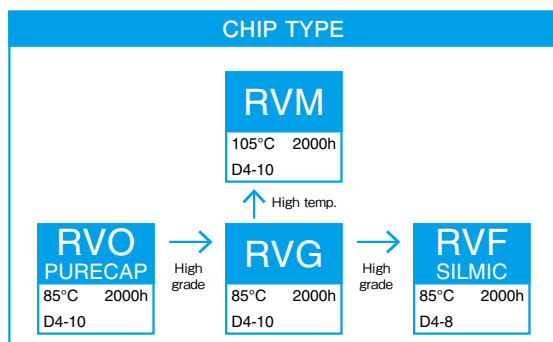

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

■ Systematized Classification of Aluminum Electrolytic Capacitors

● Large Capacitance Aluminum Electrolytic Capacitors

● Aluminum Electrolytic Capacitors For Audio

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

■ Product Symbol System for Aluminum Electrolytic Capacitors

① Series code

Please refer to the page of each series.

② Rated voltage symbol

Write down the rated voltage itself ; however, write 2R5 for 2.5V, 6 for 6.3V.

③ Rated capacitance symbol

The symbol denoting nominal capacitance shall consist of three numerals. The first and second numerals shall represent the significant figures of nominal capacitance in the unit of microfarad (μF). And the third numeral shall represent the number of zeros following the significant figures. A decimal point is expressed with "R."

Example

| Rated capacitance (μF) | Symbol |
|------------------------|--------|
| 0.1 | R10 |
| 1 | 010 |
| 2.2 | 2R2 |
| 33 | 330 |
| 100 | 101 |
| 2200 | 222 |
| 33000 | 333 |
| 470000 | 474 |

④ Capacitance tolerance symbol

Example

| Capacitance tolerance | Symbol |
|-----------------------|--------|
| ±10% | K |
| ±20% | M |
| -10 to +30% | Q |
| -10 to +50% | T |

⑤ Casing symbol

Please refer to the page of each series.

⑥ Optional symbol

Plating

Example

| Symbol | Contents |
|--------|--|
| # | Sn 100% plating +PET sleeve (lead terminal type) |
| U | Sn-Bi plating (chip type) |
| T | Sn 100% plating (chip type) |

For Automotive

Example

| Symbol | Contents |
|--------|-------------------|
| Q | Based on AEC-Q200 |
| N | Based on AEC-Q200 |

⑦ Taping, Lead-forming symbol

Write down one of the forming symbols given on page for taping and lead-forming capacitors. When taping or lead-forming is not necessary, leave the boxes blank.

NOTE : Design, Specifications are subject to change without notice. It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Recommended land pattern and size

(Vertical chip type)

- Standard type

(Unit : mm)

| Case Size φD×L | Land Size | | | Thickness of Solder paste |
|------------------------|-----------|------|------|------------------------------|
| | X | Y | W | |
| 4×4.5, 5.3, 5.7, 5.8 | 1.6 | 2.6 | 1.0 | 0.15 |
| 5×4.5, 5.3, 5.7, 5.8 | 1.6 | 3.0 | 1.4 | 0.15 |

* For Vibration resistance use
 φ8×6.5 Y=4.5 W=1.0
 φ8×10, φ8×10.5 Y=4.0 W=2.5
 φ10×10, φ10×10.5 Y=4.5 W=3.0
 φ10×12.5 Y=4.5 W=3.0

- For vibration resistance type

RTZ, RTD, RTT, RTQ, RTV, RMH, RMD, RMJ, RMF, RME, HT, HTK, HTX, HTQ series

(Unit : mm)

| Case Size φD | Land Size | | | Thickness of Solder paste |
|-----------------|-----------|-----|-----|------------------------------|
| | X | Y | W | |
| 6.3 | 3.0 | 4.0 | 1.6 | 0.20 |
| 8 | 5.0 | 4.0 | 2.5 | 0.20 |
| 10 | 5.0 | 4.8 | 3.6 | 0.20 |
| 12.5 | 7.0 | 6.6 | 3.2 | 0.20 |
| 16 | 10.5 | 7.8 | 5.0 | 0.20 |
| 18 | 10.5 | 8.8 | 5.0 | 0.20 |

■ Recommended soldering conditions (Lead free)

● Aluminum (Conductive Polymer, Hybrid) electrolytic capacitors (Lead terminal type, Snap-in type)

(1) Soldering iron conditions

Iron tip temperature shall be $400^{\circ}\text{C} \pm 5^{\circ}\text{C}$ within the duration of $3^{\pm 1}$ seconds.

(2) Flow soldering conditions

The recommendation soldering conditions of the product in which flow soldering is possible are as graph.

Caution for Using aluminum Electrolytic Capacitors

- (1) Do not dip the capacitor into melted solder.
- (2) Do not flux other part than the terminals.
- (3) If there is a direct contact between the sleeve of the capacitor and the printed circuit pattern or a metal part of another component such as a lead wire, it may cause shrinkage or crack.
- (4) If the application is for extended use, understand and manage the soldering characteristics to avoid abnormal current caused by a contact failure between the capacitor and the PCB.
- (5) Please refer to cautions for using on page and product specifications about other notes.

■ Recommended soldering conditions (Lead free)

● Chip type aluminum (Conductive Polymer, Hybrid) electrolytic capacitors

- (1) Soldering iron conditions
Iron tip temperature shall be $400^{\circ}\text{C} \pm 5^{\circ}\text{C}$ within the duration of 3¹/₂ seconds.
- (2) Reflow soldering conditions

Profile

1. Preheating shall be under 180°C within 120 seconds.
2. Peak temperature shall be within the following table.
3. For conditions exceeding the tolerances, consult with us.

T200 : Duration while capacitor head temperature exceeds 200°C (s)
 T217 : Duration while capacitor head temperature exceeds 217°C (s)
 T230 : Duration while capacitor head temperature exceeds 230°C (s)
 The measurement temperature point is the case top.

● Chip type aluminum Conductive Polymer, Hybrid electrolytic capacitors

| Series | Size | Peak temp. (5sec or less) | T230 | T217 | T200 | Reflow cycle |
|---|--------------|---------------------------|--------------|--------------|--------------|-----------------|

Please inquire for details.

Standard packing specification of aluminum electrolytic capacitors (long lead, lead forming)

| | | |
|----------------|---|---|
| Classification | Long lead, Lead forming of $\phi 10$ or less (Standard packing) | Lead forming of $\phi 12.5$ or more (Standard packing) |
| Packing style |  Plastic bag  Inner box |  Small box  Inner box |

| | | |
|----------------|---|--|
| Classification | $\phi 10$ to $\phi 22$ (Optional packing) | $\phi 22$ or more (Standard packing) |
| Packing style |  Tray  Inner box |  Inner box  Outer box |

Please inquire for details.

**Conductive Polymer Hybrid Aluminum Electrolytic Capacitors
Aluminum Electrolytic Capacitors With Conductive Polymer Solid Electrolyte**

■ Cautions for Using Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Aluminum Electrolytic Capacitors With Conductive Polymer Solid Electrolyte

Please be sure to read this specification before using this product.

Before placing an order, please inquire about the Specification to check details.

■ Cautions for Usage

1. Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors are polarized.

- Using a capacitor with reversed polarity causes abnormal current flow, resulting in a short circuit.
- Cannot use for the circuit to which the polarity reverses by ripple voltage.

2. Prohibited Circuits

- Since leakage current problem may arise, capacitors cannot be used in the following circuits.
 - ① Coupling circuits
 - ② Circuits greatly affected by leakage current

3. Use capacitors within the rated voltage.

- The application of voltages exceeding the rated voltage can significantly increase leakage current, resulting in a short failure. Please do not apply a voltage exceeding the rated voltage.

4. Be careful of excessive rush current.

- Using capacitors in the circuit where excessive rush current passes may cause characteristic deterioration or a short. When the rush current exceeds 10 A, we recommend use of protection circuits to ensure high reliability.

5. Use the allowable ripple voltage and the rated ripple current below the specified values.

- When superimposing a ripple voltage on a DC bias voltage, exercise care that the peak voltage value does not exceed the rated voltage and does not reverse the polarity.
- The rated ripple current shall be below the specified value.

6. Changes in characteristics due to operating temperature

- The characteristics of conductive polymer hybrid aluminum electrolytic capacitors, solid conductive polymer aluminum electrolytic capacitors vary by temperature as follows. These variations are temporary and recover when the temperature goes back (except for the case of characteristic deterioration because of high temperatures over a long time). Note that using capacitors over the upper category temperature increases leakage current, resulting in a short and destruction.

Be careful of the capacitor temperature considering not only the ambient temperature where the equipment is placed and the temperature inside the equipment but also radiation heat from the heating element inside the equipment, and self-heat

generation by ripple current.

- ① Capacitance expressed in the value at 20°C, 120 Hz increases with increased temperature and decreases with decreasing temperature.
- ② Tangent of loss angle ($\tan\delta$) expressed in the value at 20°C, 120 Hz is temperature-independent.
- ③ Equivalent series resistance (ESR) expressed in the value at 20°C, 100 kHz is temperature independent.
- ④ Leakage current increases with increased temperature and decreases with decreasing temperature.

7. Changes in characteristics due to frequency

- The characteristics of conductive polymer hybrid aluminum electrolytic capacitors, solid conductive polymer aluminum electrolytic capacitors vary by operating frequency as follows.
 - ① Capacitance expressed in the value at 20°C, 120 Hz decreases with increased frequency.
 - ② Tangent of loss angle ($\tan\delta$) expressed in the value at 20°C, 120 Hz increases with increased frequency.
 - ③ Equivalent series resistance (ESR) expressed in the value at 20°C, 100 kHz increases with decreasing frequency.

8. Failure modes of solid conductive polymer aluminum electrolytic capacitors

- The failure modes of solid conductive polymer aluminum electrolytic capacitors are a wear-out failure by deterioration of electrical performance and a random failure by a short. The failure rate level is 0.5%/1,000h at the reliability level of 60% with the specified voltage applied at 105°C.
- If a short occurs and continues with the application of a voltage exceeding the rated voltage, increasing the internal temperature, the internal pressure increases by vaporization of the cathode material, which may cause the aluminum case to come off.

9. Operating environments

- Do not use capacitors in an environment directly exposed to water, saltwater spray, oil spill or condensation.
- Do not use capacitors in an environment filled with toxic gas such as hydrogen sulfide, sulfurous acid, nitrous acid, chlorine, ammonia, etc.
- Do not use capacitors in a place exposed to ozone, ultraviolet rays, or radiation.

10. Fumigation Process

- Before transportation of electronic equipment to overseas, fumigation process may be subjected to wooden packing material with a halogen (compound) gas such as methyl bromide. Exercise care that this halogen gas may corrode capacitors. Also, be careful of epidemic preventive agent as corrosive component such as halogen may be contained.

11. The case of Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors and the cathode terminal are not insulated.

- The case and the cathode terminal are not insulated as being connected through inconstant resistance.

12. Double-sided PCB's

- When using capacitors on a double-sided PCB, exercise care that the wiring pattern does not touch the area where the capacitors are mounted. Failure to do so may cause a short to occur to the PCB depending on the mounting conditions.

13. Regarding Connection of Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors

- When connecting more than one capacitor in parallel, consider the current balance.

14. Use at a high altitude

- The use of capacitors at high altitudes such as on an airplane causes a large difference between the internal pressure of the capacitors and the atmospheric pressure. However, there is no problem in use under atmospheric pressure up to about an altitude of 10,000 meters.

If the condition is severe like space, please contact us.

15. Other Notes

- Do not use capacitors on a circuit where rapid charge and discharge are repeated.
- Electrical characteristics of capacitors vary by variations in temperature and frequency. Please consider these variations when designing a circuit.

■ Cautions for Mounting

1. Cautions for Mounting

- Do not reuse capacitors that have been assembled in a set and energized. Capacitors cannot be reused except for those which have been measured on electrical performance during periodic inspection.
- Before mounting, confirm the capacitor ratings (rated capacitance and rated voltage).
- Capacitors may generate transient recovery voltage. In this case, discharge through a resistor of about 1 k Ω .

- Before mounting, confirm the polarity of capacitor.
- Do not drop capacitors onto a floor nor use them.
- Do not mount deformed capacitors.
- Do not mount heating parts around capacitors and on the back of the PCB under or back of capacitors).

2. Do not apply excessive pressure to the capacitor or its terminals

- Be careful of the shock force that can be produced by absorbers, product checkers, and centering on automatic inserters and installers.

3. Soldering

- Do not solder capacitor body by dipping into melted solder.
- Soldering conditions (preheating, soldering temperature, terminal dipping time) should be within the ranges specified in the catalog or the delivery specification.
Please refer to individual page.
- Flux should not adhere to the parts other than the terminals.
- When using a soldering iron, avoid excessive stress to capacitor body.
- Although leakage current may increase (from a few μA to hundreds of μA) after soldering, it can be reduced through self-repair by applying voltage. It is advised to operate the set properly after treating with the recommended voltage.
- In case of a long-term use of equipment, control the soldering characteristics so that capacitors and PCB do not fail to connect to avoid abnormal current passage by a failure of soldering to mount.

4. Handling after Soldering

- Do not tilt, fall, raise or twist capacitor body.
- Do not pick up or move PCB by holding a capacitor.
- Do not bump capacitors against objects. When stacking PCB's, make sure that capacitors do not touch the PCB's or other components.
- Do not subject capacitors to excessive stress.

5. Cleaning after Soldering

- Recommended cleaning method
 - ① Cleaning solutions:
 - (a) CLEANTHROUGH 710M, 750H, 750L
 - (b) PINEALPHA ST-100S
 - (c) Techno Care FRW-4~17
 - (d) Isopropyl alcohol (2-propanol)
 - ② Cleaning conditions:
 - (a) The temperature of cleaning solution shall be less than 60°C.
 - (b) Use immersion or ultrasonic waves within two minutes.

- (c) After cleaning, capacitors and PCB's shall thoroughly be rinsed and dried with hot blast for more than 10 minutes. The temperature of such breeze should be less than the upper category temperature.
- (d) After cleaning, do not keep capacitors in cleaning solution atmosphere or airtight containers.
- During cleaning, control the cleaning solution against contamination.

6. Fixing adhesives and coating materials.

- Do not use halogenated fixatives and coatings.
- Before using a fixative or coating, remove flux residues and contaminants from between the PCB and the sealing section of capacitors.
- Dry the cleaning solution before using the adhesive or coating.
- Do not cover up all the sealing sections (terminal side) of capacitors with the adhesive or coating.
- Heat curing conditions of fixative and coating.

■ Other Cautions

1. Do not directly touch the terminals of Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors.

Failure to do so can cause electric shock or burns. Before use, allow capacitors to discharge through a 1kΩ resistor (with a sufficient margin to the heat generation capacity) as needed.

2. Do not short-circuit between the terminals of the Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors. Do not subject capacitors to conductive solutions such as acid and alkaline water solutions.

3. Periodic inspection should be performed on the capacitors for the industrial equipment application.

Check the following checkpoints.

- Visual inspection to check for significant defects.
- Electrical performance: leakage current, rated capacitance, tangent of loss angle, ESR, and items specified in the catalog or the specification.

4. Be careful of the following cases of emergency.

- In case of a short during use of capacitors in sets, producing gas, turn off the main power of the set or unplug the power cord from the outlet.
- In case of a short, producing gas, it may take a few seconds to a few minutes depending on the conditions. Therefore, ensure that the protective circuit of the power supply works during this time.
- If the gas gets in your eyes, rinse them immediately. Gargle if the gas is inhaled.

- Do not lick the electrolyte of capacitors. When the electrolyte gets on your skin, wash it off with soap immediately.

5. Storage Conditions.

- Do not store at high temperature and high humidity. Store at a temperature of 5 to 35°C and a relative humidity of less than 75%, keeping free from direct sunlight.
- Solid conductive polymer aluminum electrolytic capacitors are during delivery, stored in airtight moistureproof bags to ensure satisfactory soldering. Once the bag is opened right before mounting, it is better to use up the capacitors. If some are unavoidably left over, return them to the moistureproof bag, and seal the opening hermetically.
- There may have increased leakage current when unused or stored for a long time after mounted on equipment. This phenomenon often occurs at high ambient temperatures; however, leakage current will decrease through voltage treatment. If leakage current still increases after a lapse of more than one year at ambient temperature (shorter time at high temperatures), treat with voltage as needed. In design of equipment, consider the effect of increase in initial current, and install protective circuits as needed.

Please check that recommended voltage treatment conditions are provided for each series.

- Do not store capacitors in an environment directly exposed to water, saltwater spray, oil spill or condensation.
- Do not store capacitors in an environment filled with toxic gas such as hydrogen sulfide, sulfurous acid, nitrous acid, chlorine, ammonia, etc.
- Do not store capacitors in a place exposed to ozone, ultraviolet rays, or radiation.

6. Please take the following actions when disposing of Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors.

- Entrust to specialists of industrial waste treatment for incineration.

7. Others

- Before using capacitors, check the details of the specification and catalog as well as the following.

Technical Report of Japan Electronics and Information Technology Industries Association

EIAJ RCR-2367

Guideline of notabilia for fixed aluminum electrolytic capacitors for use in electronic equipment

Conductive Polymer Hybrid Capacitors

GREEN CAP

SMD

Low ESR

105°C
10000hours

- Low ESR and high ripple current are realized.
- HT is resist to vibration. (30G guaranteed)
- Equivalent to conductive polymer type Aluminum Electrolytic Capacitor. (There are little characteristics change by temperature and frequency)
- Guaranteed 105°C, 10000 hours.

Marking color : Blue print

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Conductive Polymer Hybrid Capacitors

GREEN CAP

SMD

Low ESR

125°C
4000hours

125°C
6000hours

- Low ESR and high ripple current are realized.
- HTK is resist to vibration. (30G guaranteed)
- Equivalent to conductive polymer type Aluminum Electrolytic Capacitor. (There are little characteristics change by temperature and frequency)

Marking color : Blue print

It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Conductive Polymer Hybrid Capacitors

GREEN CAP

SMD

Low ESR

135°C
4000hours

- Low ESR and high ripple current are realized.
- HTX is resist to vibration. (30G guaranteed)
- Equivalent to conductive polymer type Aluminum Electrolytic Capacitor. (There are little characteristics change by temperature and frequency)
- Guaranteed 135°C, 4000 hours.(φ 6.3: 2000 hours)

Marking color : Blue print

**Aluminum Electrolytic Capacitors
(Chip Type, Miniature Type, Large Type, For Audio)**

■ Cautions for Using Aluminum Electrolytic Capacitors

Please read the specification before using ELNA products.

The following cautions should be observed when using our aluminum electrolytic capacitors to assure their maximum stability and performance. When your application design conditions or operating conditions exceed the limit of the product specification, please contact us. If used under conditions beyond the limit of our specifications, it may cause defects such as short circuit, open circuit, leakage, explosion or combustion.

■ Cautions for usage

1. DC electrolytic capacitors are polarized.

- If used with a wrong polarity, it creates an abnormal current resulting in a short circuit or damage to itself. Use DC bipolar electrolytic capacitors for use with uncertain or unknown polarity. DC capacitors cannot be used in AC circuits.

2. Use within the rated voltage.

- If a voltage exceeding the rated voltage is applied, it may cause characteristic deterioration or damage due to the increased leakage current.
- When ripple current is loaded, make sure that the peak value of the ripple voltage does not exceed the rated voltage.

3. Using for power supply circuit.

- While aluminum electrolytic capacitors are operated electrolyte liquid inside dries up and E.S.R. (Equivalent Series Resistance) of the capacitor increases. In case operated longer than rated life time, the capacitance much decreases, tangent of loss angle and E.S.R. much increases. Therefore for some case the sum of bias direct voltage and the peak of ripple voltage is over the rated voltage of the capacitor.
- For any type of circuit, in case the sum of bias direct voltage and the peak of ripple voltage is over the rated voltage of the capacitors or in case the minimum voltage is lower than 0 (zero) volt, the voltage control for the capacitors shall be provided.

4. Do not use in a circuit which requires rapid charging or discharging.

- If used in a circuit requiring rapid charging or discharging, it may cause characteristic deterioration or damage to itself due to the heat generated inside the capacitor. In such cases, contact us for our rapid charging/discharging capacitors.

5. Use within the rated ripple current.

- If applied ripple current exceeds rated ripple current, the life of the capacitor may be shortened, or in an extreme case it gets destroyed due to its internal heat. Use high-ripple type capacitors for such circuits.

6. Changes in characteristics due to operating temperature.

- The characteristics of an electrolytic capacitor will change with a change in the temperature. Such changes are temporary and the original characteristics will be restored at the original temperature (if the characteristics are not deteriorated by remaining

at a high temperature for a long time). If used at a temperature exceeding the guaranteed temperature range, the capacitor may be damaged due to the increased leakage current. Pay attention to the capacitor temperature being affected by the ambient temperature of the unit, the temperature inside the appliance, the heat radiated by another hot component in the unit and the heat inside the capacitor itself due to the ripple current.

- (1)The electrostatic capacitance is normally shown as the value at 20°C-120Hz. It increases as the temperature raises and decreases as it lowers.
- (2)The tangent of loss angle ($\tan\delta$) is normally shown as the value at 20°C-120Hz. It decreases as the ambient temperature gets high and increases as it gets low.
- (3)The leakage current increases as the temperature gets high and decreases as it gets low.

7. Changes in the characteristics due to frequency.

- The characteristics of an electrolytic capacitor will change according to the change in the operating frequency.
 - (1)The electrostatic capacity is normally shown as the value at 20°C-120Hz. It decreases as the frequency increases.
 - (2)The tangent of loss angle ($\tan\delta$) is normally shown as the value at 20°C-120Hz. It increases as the frequency gets high.
 - (3)The impedance is normally shown as the value at 100kHz 20°C. It increases as the frequency lowers.

8. Aluminum electrolytic capacitor life.

- The life of an aluminum electrolytic capacitor terminates when it fails due to the deterioration in its electronic characteristics. Temperature and the ripple current since they especially affect the life. See chart on page.

9. Changes in aluminum electrolytic capacitors during storage.

- After storage for a long period, whether unused or mounted on the appliance, the leakage current of an aluminum electrolytic capacitor will increase. This tendency is more prominent when the ambient temperature is high. If a capacitor has been stored for more than 2 years under normal temperature (shorter if high temperature) and it shows increased leakage current, a treatment by voltage application is recommended. Addition of a protective circuit in the design of the appliance is also recommended, considering the effect of the initial increased current.

10. Insulation between the capacitor case and the cathode terminal.

- The capacitor case and the cathode terminal are connected through the electrolyte which has uncertain resistance. If a complete insulation of the case is necessary, add an insulator at assembly.

11. NC terminal (the supplemental terminal) (series RPK, LJ6, LJ2)

- Since NC terminal is not insulated. It should be mounted at a position electronically independent from all other parts of the circuit.

12. External sleeve

- During a preheating or a hardening of mounting adhesive may cause a sleeve cracked. The capacitors are usually sleeved with poly vinyl chloride or poly ethylene terephthalate for the indication purpose only. Please do not consider it as an insulation.

13. Fumigation Process

- When exporting electronic equipment abroad, fumigation process may be performed on wooden packaging material with a halogen (compound) gas such as methyl bromide. Exercise care as this halogen gas may corrode capacitors. Also, use caution to epidemic preventive agent as corrosive component such as halogen may be contained.

14. Specific Operating Environments

- Capacitors may corrode when stored or used in a place filled with acidic toxic gases (such as hydrogen sulfide, sulfurous acid, nitrous acid, chlorine, bromine, methyl bromide, etc.) If capacitors are used or stored in such environments, please let us know.

15. Use at a high altitude

- The use of capacitors at high altitudes such as on an airplane causes a large difference between the internal pressure of the capacitors and the atmospheric pressure. However, there is no problem in use under atmospheric pressure up to about an altitude of 10,000 meters. Please check the operation of electronic equipment at the operating environmental temperature because the temperature lowers with increased altitude. If the condition is severe like space, please contact us.

16. Hole pitch adjustment of the PCB to the capacitors.

- Set the hole pitch of the PCB to the lead pitch (the "F" distance in the catalog) of the capacitor. Be careful since a short circuit, a cut or an increase in the leakage current etc. may be caused by the stress given to the lead wire terminals due to the difference between the hole pitch and the lead pitch.

17. Capacitors with pressure valves.

- A part of the capacitor case is made thin to have the function as the pressure valve in order to prevent explosion due to the rise of inside pressure when a reverse or excessive voltage is applied to the capacitor. Once it has worked as a valve, the whole capacitor needs to be replaced since the valve will not restore.
- When you use a capacitor with pressure valve, provide certain space above the pressure valve as below to prevent an interference when it works as a valve.

| | | |
|-------------------------------------|-------------|-------------|
| Diameter of the capacitor (mm) | 18 or less | 20 to 40 |
| Required space above the valve (mm) | 2.0 or more | 3.0 or more |

18. Double-sided PCB's

- When you use electrolytic capacitors on a double sided PCB, be careful not to have the circuit pattern run under where the capacitor is mounted. Otherwise it may cause a short circuit on the PCB depending on the condition of mounting.

19. Regarding to connection of capacitors

- Aluminum electrolytic capacitor has electrolyte liquid so that the most portion of electric loss characteristics came from E.S.R(Equivalent Series Resistance) of electrolyte liquid. Therefore the capacitor is an electronic devise which can flow high ripple current in case the temperature increases and it decreases E.S.R. In case connecting two capacitors or more, E.S.R. of the capacitors is close to the resistance of the circuit. Therefore in case current is unbalanced and some capacitors has high ripple current, temperature increase, it makes more high current and finally it is over the rated ripple current. For parallel connection of capacitors the proper design of electric circuit such as balancing of each capacitors resistance or control of total ripple current shall be provided to avoid excess ripple current and voltage.
- When two or more capacitors are arranged in series, the voltage given to each capacitors shall be kept below the rated voltage level, by also giving consideration to the balance of the voltage impressed on the capacitors. Further, partial pressure resistor which considers leakage current shall be provided parallel to each condenser not to have over-voltage impressed on. Balance resistance are explained on p.106 of our Catalog.

NOTE : Design, Specifications are subject to change without notice. It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

■ Cautions for Mounting

1. Cautions for mounting.

- Check the ratings (electrostatic capacitance and rated voltage) of the capacitor before mounting.
- Transient recovery voltage may be generated in the capacitor due to dielectric absorption. If required, this voltage can be discharged with a resistor with a value of about 1 kΩ.
- Check the polarity of the capacitor to the chassis.
- Do not drop the capacitor to the floor. Do not use the dropped capacitor.
- Do not deform the capacitor for mounting.

2. Do not apply excessive pressure to the capacitor, its terminals or lead wires.

- Make sure that the contact path of the capacitor meets the hole pitch of the PCB before mounting.
- A PCB self-standing (snap-in) type capacitor should be pushed to the end (till there is no space) to the PCB for mounting.
- Do not set the automatic insertion machine to clinch the capacitor lead wires too strong.
- Pay attention to the impact given by the component receptacles of the automatic insertion/mounting machines and the product checker, and from the centering operation.

3. Soldering.

- Do not dip the capacitor into melted solder.
- The soldering conditions
About detail conditions are described in the catalog or product specification.
- Do not flux other part than the terminals.
- If there is a direct contact between the sleeve of the capacitor and the printed circuit pattern or a metal part of another component such as a lead wire, it may cause shrinkage of crack.
- When you use the capacitor with its sleeve touching directly to the PCB, excessive solder temperature or excessive soldering time may cause the sleeve to shrink or crack during the heat.
- If the application is for extended use, understand and manage the soldering characteristics to avoid abnormal current caused by a contact failure between the capacitor and the PCB.

4. Handling after soldering

- After soldering, do not tilt, push down or twist the capacitor.
- After soldering, do not hold the capacitor as a handle to carry the PCB.
- After soldering, do not hit the capacitor with any obstacle. If PCB's are piled up for storage, the capacitor should not touch another PCB or component.

5. Cleaning after Soldering

- Recommended cleaning method
 - (1) cleaning solutions:
 - (a) CLEANTHROUGH 710M, 750H, 750L
 - (b) PINEALPHA ST-100S
 - (c) Techno Care FRW-4~17
 - (d) Isopropyl alcohol (2-propanol)
 - (2) Cleaning conditions:
 - (a) The temperature of cleaning solution shall be less than 60°C.
 - (b) Use immersion or ultrasonic waves within two minutes.
 - (c) After cleaning, capacitors and PCB's shall thoroughly be rinsed and dried with hot blast for more than 10 minutes. The temperature of such breeze should be less than the upper category temperature.
 - (d) After cleaning, do not keep capacitors in cleaning solution atmosphere or airtight containers.
- During cleaning, control the cleaning solution against contamination.

6. Fixing adhesives and coating materials.

- Do not use fixing adhesive or coating material containing halogen-based solvent.
- Before applying the fixing adhesive or the coating material, make sure that there is no remaining flux or stains between the PCB and the sealed part of the capacitor.
- Before applying the fixing adhesive or the coating material, make sure that the detergent etc. has dried up.
- Do not cover the whole surface of the sealed part (terminal side) of the capacitor with the fixing adhesive or the coating material.
- Observe the description in the catalog or the product specifications concerning the thermal stiffening conditions of the fixing adhesive or the coating material. (If there is no such description, contact us.)
When both discrete and SMT components are on the same PCB, the fixing material for the SMT components may cause crack, tear or shrinkage on the external sleeve depending on the thermal stiffening condition.
- Recommended fixing adhesives and coating materials
Fixing adhesives : Cemedine 1500, Diabond DN83K, Bond G103
Coating materials : Taffy TF1159, HumiSeal 1B66NS, 1A27NS

■ Other Cautions**1. Do not touch capacitor terminals with bare hands.**

You may get electric shock or your hand may be burnt. Discharge it with a 1 KΩ resistance before use if necessary.

2. Do not short the capacitor terminals with a conductor.

Do not spill conductive solution including acid or alkaline solution on the capacitor.

3. Periodical Inspections should be established for the capacitors in industrial appliances.

- The following items should be checked:
 - (1) Appearance : Check if there is any open valve or leakage.
 - (2) Electronic performance : Check the leakage current, the electrostatic capacitance, the tangent of loss angle and other items described in the catalog or the product specifications.

4. Take the following measures in case of emergency.

- If you see gas coming out of the capacitor valve when the set is in operation, turn off the power switch of the unit or unplug the power cord from the outlet.
- Keep your face away from the capacitor pressure valve, since the high temperature gas at over 100°C bursts out when the valve works. If the gas gets into your eyes or your mouth, wash your eyes or your mouth. Do not ingest the capacitor electrolyte. If the electrolyte gets on your skin, wash it out with soap.

5. Storing conditions.

- Avoid high temperature or high humidity when storing capacitors. Keep the storing temperature at 5°C to 35°C and the relative humidity not more than 75%.
- The leakage current of an aluminum electrolytic capacitor tends to increase when stored for a long time. This tendency becomes more prominent if the ambient temperature is high. The leakage current will be decreased by voltage application. If necessary, treatment by voltage application should be made on the capacitors which have been stored for a long period (more than 2 years after production).
- Do not store capacitors at a place where there is a possibility that they may get water, salt or oil spill.
- Do not store capacitors at a place where the air contains dense hazardous gas (hydrogen sulfide, sulfurous acid, nitrous acid, chlorine, ammonia, etc.).
- Fumigation treatment with toxic gas covering the whole wooden container frames as moth proofing during shipment may leave residual toxic gas.
- Do not store capacitors at a place where it gets ultra-violet or radioactive rays.

6. Disposing of capacitors.

- Punch a hole or crush the capacitors (to prevent explosion) before incineration at approved facility.
- If they are not to be incinerated, bring them to a professional industrial waste disposal company.

7. Other notes.

- Please refer to the following literature for anything not described in the specification or the catalog.

(Technical report of Japan Electronics and Information Technology Industries Association, EIAJ RCR-2367 “Guideline of notabilia for fixed aluminum electrolytic capacitors for use in electronic equipment”)

Chip Type Aluminum Electrolytic Capacitors

Chip Type 85°C High CV Capacitors GREEN CAP SMD Anti-cleaning solvent

- Compatible with surface mounting.
- Supplied with carrier taping.
- Guarantees 2000 hours at 85°C.

Marking color : Black print

Specifications

| Item | Performance | | | | | | | | | | |
|---|---|---|-----|----|----|----|----|----|----|-----|---|
| Category temperature range (°C) | -40 to +85 | | | | | | | | | | |
| Tolerance at rated capacitance (%) | ±20 (20°C,120Hz) | | | | | | | | | | |
| Leakage current (µA) (max.) | 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C) | | | | | | | | | | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 4 | 6.3 | 10 | 16 | 25 | 35 | 50 | 63 | 100 | |
| | tanδ (max.) | Refer to following page. (20°C,120Hz) | | | | | | | | | |
| Characteristics at high and low temperature | Rated voltage (V) | 4 | 6.3 | 10 | 16 | 25 | 35 | 50 | 63 | 100 | |
| | Impedance ratio (max.) | Z-25°C/Z+20°C | 7 | 4 | 3 | 2 | 2 | 2 | 2 | 2 | 2 |

ESR : 20°C , 100kHz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Chip Type, 125°C Use, Low ESR, Long Life Capacitors

GREEN CAP

SMD

Low ESR

125°C
5000hours

Anti-cleaning solvent

- Compatible with surface mounting.
 - Supplied with carrier taping.
 - Guaranteed 1000 to 5000 hours at 125°C.
- (See table below)

Marking color : Black print

Specifications

| Item | Performance |
|---|---|
| Category temperature range (°C) | -40 to +125 |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) |
| Leakage current (µA) (max.) | 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C) |

(Note) Rated ripple current : 105°C, 120Hz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

**For Vibration Resistance,
Chip Type Aluminum Electrolytic Capacitors**

Chip Type 105°C Use, Low ESR, For Vibration Capacitors

GREEN CAP

SMD

Vibration Resistance

Low ESR

105°C 5000hours

Anti-cleaning solvent

- Compatible with surface mounting.
- For Vibration resistance. (30G guaranteed)
- Supplied with carrier taping.
- Guaranteed 5000 hours at 105°C.
($\phi 6.3$: 1000 hours, $\phi 8, \phi 10$: 2000 hours)

Marking color : Black print

(Note) Rated ripple current : 105°C , 100kHz
ESR : 20°C , 100kHz

Chip Type 125°C Use, Low ESR, For Vibration Capacitors

GREEN CAP

SMD

Vibration Resistance

Low ESR

125°C 5000hours

Anti-cleaning solvent

- Compatible with surface mounting.
- For Vibration resistance. (30G guaranteed)
- Supplied with carrier taping.
- Guaranteed 1000 to 5000 hours at 125°C. (See table below)

Marking color : Black print

Specifications

(Note) Rated ripple current : 125°C , 100kHz
ESR : 100kHz

Chip Type 150°C Use, Low ESR, For Vibration Capacitors

GREEN CAP

SMD

Vibration Resistance

Low ESR

150°C 1000hours

Anti-cleaning solvent

- Compatible with surface mounting.
- For Vibration resistance. (30G guaranteed)
- Supplied with carrier taping.
- Guaranteed 1000 hours at 150°C.

Marking color : Black print

Specifications

| Item | Performance | | | | | | | | | | | | | | | | |

(Note) Rated ripple current : 85°C, 120Hz

NOTE : Design, Specifications are subject to change without notice. It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

105°C Bipolar Capacitors

GREEN CAP Anti-cleaning solvent

• Guarantees 2000 hours at 105°C.

High temperature

Marking color : White print on a black sleeve

Specifications

| Item | Performance | |
|---|---|---|
| Category temperature range (°C) | -40 to +105 | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | |
| Leakage current (μA) (max.) | 0.03CV + 3 (after 5 minutes) C : Rated capacitance (μF) ; V : Rated voltage (V) (20°C) | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 6.3 10 16 25 35 50 |
| | tan δ (max.) | 0.4 0.3 0.2 0.2 0.16 0.14 |
| 0.02 is added to every 1000μF increase over 1000μF (20°C, 120Hz) | | |
| Characteristics at high and low temperature | Rated voltage (V) | 6.3 10 16 25 35 50 |
| | Impedance ratio (max.) | Z-25°C/Z+20°C: 5 4 3 2 2 2 Z-40°C/Z+20°C: 10 8 6 4 3 3 |
| 0.5 for -25°C, 1 for -40°C are added to every 1000μF increase over 1000μF (120Hz) | | |
| Endurance (105°C) (Applied ripple current) | Test time | 2000 hours (φ5 to φ8 : 1000 hours) with the polarity inverted every 250 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±20% of initial value |
| | Tangent of the loss angle | 200% or less of the initial specified value |
| Shelf life (105°C) | Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4 4.1 | |
| Applicable standards | JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | |

(Note) Rated ripple current : 105° C, 120Hz ; ESR. : 20° C, 120Hz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

105°C Miniature Capacitors

GREEN CAP 105°C 2000hours Anti-cleaning solvent 250V Max.

- Case size is one rank smaller than Series RJ3.
- Guarantees 2000 hours at 105°C. (φ5 to φ8 : 1000 hours)

Marking color : White print on a black sleeve

NOTE : Design, Specifications are subject to change without notice. It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

105°C Use, Standard Capacitors

GREEN CAP

105°C
2000hours

Anti-cleaning solvent
250V Max

• Guarantees 2000 hours at 105°C (φ5 to φ8 : 1000 hours).

Marking color : White print on a black sleeve

(Note) Rated ripple current : 105°C, 120Hz ; ESR : 20°C, 120Hz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

105°C Use, Miniature, High-Reliability, Low Impedance Capacitors

GREEN CAP

Low Impedance

105°C 5000hours

Anti-cleaning solvent

- Smaller and higher ripple current than RJB Series.
- Guarantees 5000 hours at 105°C.
($\phi 5$ to $\phi 6.3$: 2000 hours ; $\phi 8$ to $\phi 10$: 3000 hours)

Marking color : White print on a black sleeve

(Note) Rated ripple current : 105°C, 100kHz ; ESR : 20°C, 120Hz ; Impedance : 100kHz
 • : The black circles in the capacitance column denote semi-standard products.

105°C Use, Miniature, High-Reliability, Extra Low Impedance Capacitors

GREEN CAP Low Impedance 105°C 10000hours Anti-cleaning solvent

- Higher ripple current and Lower impedance than RJB series.

Marking color : White print on a black sleeve

(Note) Rated ripple current : 105°C , 100kHz ; Impedance : 100kHz

105°C Use, Miniature, Long Life, Extra Low Impedance Capacitors

GREEN CAP

Low Impedance

105°C 10000hours

Anti-cleaning solvent

- Long life than RJF series.
- Guarantees 10000 hours at 105°C.
($\phi 5$, $\phi 6.3$: 6000 hours, $\phi 8$: 8000 hours)

Marking color : White print on a black sleeve

Specifications

| Item | Performance | | | | | | | |
|---|--|---|------|------|------|------|------|---|
| Category temperature range (°C) | -40 to +105 | | | | | | | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | | | | | | | |
| Leakage current (µA) (max.) | 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (µF), V : Rated voltage (V) (20°C) | | | | | | | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 6.3 | 10 | 16 | 25 | 35 | 50 | |
| | tanδ (max.) | 0.22 | 0.19 | 0.16 | 0.14 | 0.12 | 0.10 | |
| 0.02 is added to every 1000µF increase over 1000µF. (20°C, 120Hz) | | | | | | | | |
| Characteristics at high and low temperature | Rated voltage (V) | 6.3 | 10 | 16 | 25 | 35 | 50 | |
| | Impedance ratio (max.) | Z-25°C/Z+20°C | 2 | 2 | 2 | 2 | 2 | 2 |
| | | Z-40°C/Z+20°C | 3 | 3 | 3 | 3 | 3 | 3 |
| (120Hz) | | | | | | | | |
| Endurance (105°C) (Applied ripple current) | Test time | φ5 & φ6.3 : 6000 hours φ8 : 8000 hours φ10 or more: 10000 hours | | | | | | |
| | Leakage current | The initial specified value or less | | | | | | |
| | Percentage of capacitance change | Within ±25% of initial value (φ6.3 or less : ±30%) | | | | | | |
| | Tangent of the loss angle | 200% or less of the initial specified value | | | | | | |
| Shelf life (105°C) | Test time | 1000 hours | | | | | | |
| | Leakage current | The initial specified value or less | | | | | | |
| | Percentage of capacitance change | Within ±25% of initial value (φ6.3 or less : ±30%) | | | | | | |
| | Tangent of the loss angle | 200% or less of the initial specified value | | | | | | |
| Voltage application treatment : According to JIS C5101-4 4.1 | | | | | | | | |
| Applicable standards | JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | | | | | | | |

Outline Drawing

Unit : mm

Coefficient of Frequency for Rated Ripple Current

| Rated capacitance (µF) | Frequency (Hz) | | | |
|------------------------|----------------|------|------|------|
| | 120 | 1k | 10k | 100k |
| 27 to 33 | 0.42 | 0.70 | 0.90 | 1 |
| 39 to 270 | 0.50 | 0.73 | 0.92 | 1 |
| 330 to 680 | 0.55 | 0.77 | 0.94 | 1 |
| 820 to 1800 | 0.60 | 0.80 | 0.96 | 1 |
| 2200 to 8200 | 0.70 | 0.85 | 0.98 | 1 |

Part numbering system (example : 10V1000µF)

| | | | | | | | | | |
|-------------|---|----------------------|---|--------------------------|------------------------------|---------------|---|---|------------------------|
| RJM | — | 10 | V | 102 | M | G4 | # | — | □ |
| Series code | | Rated voltage symbol | | Rated capacitance symbol | Capacitance tolerance symbol | Casing symbol | | | Taping(Forming) symbol |

(Note) Rated ripple current : 105°C, 100kHz ; Impedance : 100kHz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

105°C Use, miniature, High-Reliability, Low ESR Capacitors

GREEN CAP Low ESR 105°C 8000hours Anti-cleaning solvent

- Smaller and higher ripple current than RJB series.
- Guarantees 8000 hours at 105°C.
($\phi 5$ to 6.3 : 2000 hours; $\phi 8$: 3000 hours; $\phi 10$: 5000 hours)

Marking color : White print on a black sleeve

(Note) Rated ripple current : 105°C, 100kHz ; ESR : 100kHz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

For SRS AirBag

GREEN CAP

105°C
5000hours

Anti-cleaning solvent

For AirBag

- For SRS AirBag application
- Special tolerance at rated capacitance and high capacitance, and good low temperature behavior.
- Guarantees 5000 hours at 105°C.

For SAS AirBag

Marking color : White print on a black sleeve

Specifications

| Item | Performance | | |
|--|---|---|------|
| Category temperature range (°C) | -55 to +105 | | |
| Tolerance at rated capacitance (%) | 0 to +30 (20°C, 120Hz) | | |
| Leakage current (µA) (max.) | 0.01 CV (after 2 minutes) C : Rated capacitance (µF) , V : Rated voltage (V) (20°C) | | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 25 | 35 |
| | tanδ (max.) | 0.20 | 0.16 |
| 0.02 is added to every 1000µF increase over 1000µF (20°C, 120Hz) | | | |
| Characteristics at high and low temperature | Rated voltage (V) | 25 | 35 |
| | Impedance ratio (max.) Z-55°C/Z+20°C | 3 | 3 |
| (120Hz) | | | |
| Endurance (105°C) | Test time | 5000 hours | |
| | Leakage current | The initial specified value or less | |
| | Percentage of capacitance change | Within ±30% of initial value | |
| | Tangent of loss angle | 300% or less of the initial specified value | |
| Shelf life (105°C) | Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4 4.1 | | |
| Applicable standards | JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | | |

Outline Drawing

Unit : mm

Coefficient of Frequency for Rated Ripple Current

| Rated capacitance (µF) | Frequency (Hz) | | | |
|------------------------|----------------|------|------|----------|
| | 50 · 60 | 120 | 1k | 10k-100k |
| 830 to 1100 | 0.70 | 0.75 | 0.90 | 1 |
| 1200 to 11000 | 0.80 | 0.85 | 0.95 | 1 |

Part numbering system (example : 25V4200µF)

If it is whisker preventive structure, should change “#” into “G”.

(Note) Rated ripple current : 105°C, 100kHz ; ESR : 100kHz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

For SRS AirBag

GREEN CAP

**105°C
5000hours**

Anti-cleaning solvent

For AirBag

- For SRS AirBag application
- Special tolerance at rated capacitance and high capacitance, and good low temperature behavior.
- Guarantees 5000 hours at 105°C.

Marking color : White print on a black sleeve

Specifications

| Item | Performance | | |
|--|---|---|------|
| Category temperature range (°C) | -55 to +105 | | |
| Tolerance at rated capacitance (%) | 0 to +30 (20°C, 120Hz) | | |
| Leakage current (μA) (max.) | 0.01 CV (after 2 minutes) C : Rated capacitance (μF) , V : Rated voltage (V) (20°C) | | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 25 | 35 |
| | tanδ (max.) | 0.20 | 0.16 |
| 0.02 is added to every 1000μF increase over 1000μF (20°C, 120Hz) | | | |
| Characteristics at high and low temperature | Rated voltage (V) | 25 | 35 |
| | Impedance ratio (max.) Z-55°C/Z+20°C | 3 | 3 |
| (120Hz) | | | |
| Endurance (105°C) | Test time | 5000 hours | |
| | Leakage current | The initial specified value or less | |
| | Percentage of capacitance change | Within ±30% of initial value | |
| | Tangent of loss angle | 300% or less of the initial specified value | |
| Shelf life (105°C) | Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4 4.1 | | |
| Applicable standards | JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | | |

(Note) Rated ripple current : 105°C , 100Hz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

105°C Use, Miniature, High-Ripple, Long Life Capacitors

GREEN
CAP

105°C
12000hours

- Higher ripple current.
- Guarantees 8000 to 12000 hours at 105°C.
- Best-suited to On-Board-Charger for EV, PHEV.

Marking color : White print on a black sleeve

Specifications

| Item | Performance | | | |
|--|---|--|------------|---|
| Category temperature range (°C) | -40 to +105 | | | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | | | |
| Leakage current(µA) (max.) | 0.04CV + 100 (after 1 minutes) C:Rated capacitance (µF), V:Rated Voltage (V) (20°C) | | | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 160 to 250 | 350 to 450 | |
| | Tangent of loss angle | 0.15 | 0.20 | |
| Characteristics at high and low temperature | Rated voltage (V) | 160 to 250 | 350 to 450 | |
| | Impedance ratio (max.) | Z-25°C/Z+20°C | 3 | 5 |
| | | Z-40°C/Z+20°C | 6 | 6 |
| Endurance (105°C) (Applied ripple current) | Test time | φ10×12.5L : 8000hours φ10×16L to 25L : 10000hours φ10×30L, φ12.5 to φ22 : 12000hours | | |
| | Leakage current | The initial specified value or less | | |
| | Capacitance change | Within ±30% of initial value | | |
| | Tangent of loss angle | 300% or less of the initial specified value | | |
| Shelf life (105°C) | Test time | 1000hours | | |
| | Leakage current | The initial specified value or less | | |
| | Capacitance change | Within ±20% of initial value | | |
| | Tangent of loss angle | 200% or less of the initial specified value | | |
| Voltage application treatment : According to JIS C5101-4 4.1 | | | | |
| Applicable Standards | JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | | | |

(Note) Rated ripple current : 105°C , 100kHz

125°C Use, Miniature, Low ESR Capacitors

GREEN CAP

Low ESR

125°C 5000hours

Anti-cleaning solvent

- Smaller and low ESR than RK series.
- Guarantees 5000 hours at 125°C (2000 hours: $\phi 8$, 3000h: $\phi 10$) (4000 hours: 63V to 100V - $\phi 16 \times 20L$)

Marking color : White print on a black sleeve

(Note) Rated ripple current : 135°C , 100kHz ; ESR : 20°C , 100kHz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

135°C Use, High CV, Low ESR Capacitors

GREEN CAP

Low ESR

135°C 3000hours

Anti-cleaning solvent

- High temperature guaranteed for automotive.
- Guaranteed 3000 hours at 135°C. (63V to 100V : 2000 hours)
- High CV, high ripple current.
- For ECU of Direct injection engine, ESP etc.

Marking color : Black print

Specifications

| Item | Performance | | | | | | | | | | | | | | |
|---|---|---|------|------|------|------|-----|-----|--------------------------------------|------|------|------|------|------|------|
| Category temperature range (°C) | -40 to +135 | | | | | | | | | | | | | | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | | | | | | | | | | | | | | |
| Leakage current (µA) (max.) | 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (µF), V : Rated voltage (V) (20°C) | | | | | | | | | | | | | | |
| Tangent of loss angle (tanδ) | <table border="1"> <thead> <tr> <th>Rated voltage (V)</th> <th>25</th> <th>35</th> <th>50</th> <th>63</th> <th>80</th> <th>100</th> </tr> </thead> <tbody> <tr> <td>tanδ (max.)</td> <td>0.14</td> <td>0.12</td> <td>0.10</td> <td>0.10</td> <td>0.08</td> <td>0.08</td> </tr> </tbody> </table> | Rated voltage (V) | 25 | 35 | 50 | 63 | 80 | 100 | tanδ (max.) | 0.14 | 0.12 | 0.10 | 0.10 | 0.08 | 0.08 |
| | Rated voltage (V) | 25 | 35 | 50 | 63 | 80 | 100 | | | | | | | | |
| tanδ (max.) | 0.14 | 0.12 | 0.10 | 0.10 | 0.08 | 0.08 | | | | | | | | | |
| 0.02 is added to every 1000µF increase over 1000µF. (20°C, 120Hz) | | | | | | | | | | | | | | | |
| Characteristics at high and low temperature | <table border="1"> <thead> <tr> <th>Rated voltage (V)</th> <th>25</th> <th>35</th> <th>50</th> <th>63</th> <th>80</th> <th>100</th> </tr> </thead> <tbody> <tr> <td>Impedance ratio (max.) It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

150°C Miniature Capacitors

GREEN CAP Low Impedance 150°C 1000hours Anti-cleaning solvent

- 150°C, High temperature guaranteed.
- Guarantees 1000 hours at 150°C.

High temperature

Marking color : Black print

Specifications

| Item | Performance | | | | | | | | | | | | | | |
|---|--|---|------|------|------|------|----|----|------------------------|---------------|------|------|------|------|------|
| Category temperature range (°C) | -40 to +150 | | | | | | | | | | | | | | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | | | | | | | | | | | | | | |
| Leakage current (µA) (max.) | 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (µF), V : Rated voltage (V) (20°C) | | | | | | | | | | | | | | |
| Tangent of loss angle (tanδ) | <table border="1"> <tr> <th>Rated voltage (V)</th> <td>10</td> <td>16</td> <td>25</td> <td>35</td> <td>50</td> <td>63</td> </tr> <tr> <th>tanδ (max.)</th> <td>0.20</td> <td>0.16</td> <td>0.14</td> <td>0.12</td> <td>0.10</td> <td>0.10</td> </tr> </table> | Rated voltage (V) | 10 | 16 | 25 | 35 | 50 | 63 | tanδ (max.) | 0.20 | 0.16 | 0.14 | 0.12 | 0.10 | 0.10 |

**For Vibration, Resistance,
Miniature Aluminum Electrolytic Capacitors**

125°C Use, Long Life Capacitors

| | | | | |
|------------------|----------------------|---------|-----------------|-----------------------|
| GREEN CAP | Vibration Resistance | Low ESR | 125°C 5000hours | Anti-cleaning solvent |
|------------------|----------------------|---------|-----------------|-----------------------|

- Guarantees 5000 hours at 125°C. (4000 hours: 63V to 100V - φ16x20L)
- Best-suited to smoothing circuits and control circuits for industrial equipment power supplies of which long life and high reliability are required.
- NC terminal added items are lineup for vibration resistance. (30G guaranteed : 20mL or less)

Marking color : White print on a black sleeve

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

150°C Use, Miniature, Low ESR, High Vibration Resistance Capacitors

GREEN CAP High Vibration Resistance Low ESR 150°C 2000hours Anti-cleaning solvent

- Vibration resistance (40G, 10 to 2000Hz, X, Y, Z = per 2 hours).
- For Automotive application (ABS and electric power steering etc.)
- Guaranteed 2000 hours at 150°C (63V, 80V : 1000 hours)

Marking color : Black print

NOTE : Design, Specifications are subject to change without notice. It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Large Capacitance Aluminum Electrolytic Capacitors

LA5, LT5 LARGE CAPACITANCE ALUMINUM ELECTROLYTIC CAPACITORS **ELNA**

PCB Snap-In Miniaturized Capacitors

GREEN CAP

- 20mm-tall products for every diameter of $\phi 22$ to $\phi 35$ are now offered in series.
- As many as 4 case sizes available for the same rating.

Marking color : White print on a black sleeve

Specifications

| Item | Performance | | | | | | | |
|---|---|-------------------|---|------------|------------|------------|------------|-----------|
| Category temperature range (°C) | -40 to +85 (450V is at -25 to +85) | | | | | | | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | | | | | | | |
| Leakage current (µA) (max.) | 3√CV (after 5 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C) | | | | | | | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | | 10 | 16 | 25 | 35 | 50 | 63 to 100 |
| | tanδ (max.) | | 0.80 | 0.60 | 0.50 | 0.40 | 0.30 | 0.20 |
| | tanδ (max.) | Rated voltage (V) | | 160 to 250 | 315 to 450 | | | |
| φD (mm) | | 22 to 30 | 0.10 | 0.15 | | | | |
| | | 35 | 0.15 | 0.15 | | | | |
| Characteristics at high and low temperature | Rated voltage (V) | | 10 | 16 to 35 | 50 to 100 | 160 to 200 | 250 to 400 | 450 |
| | Impedance ratio (max.) | Z-25°C/Z+20°C | 5 | 4 | 3 | 3 | 4 | 4 |
| Z-40°C/Z+20°C | | 18 | 15 | 10 | 6 | 8 | — | |
| Endurance (85°C) (Applied ripple current) | Test time | | 2000 hours | | | | | |
| | Leakage current | | The initial specified value or less | | | | | |
| | Percentage of capacitance change | | Within ±20% of initial value | | | | | |
| | Tangent of the loss angle | | 200% or less of the initial specified value | | | | | |
| Shelf life (85°C) | Test time | | 1000 hours | | | | | |
| | Leakage current | | The initial specified value or less | | | | | |
| | Percentage of capacitance change | | Within ±15% of initial value | | | | | |
| | Tangent of the loss angle | | 150% or less of the initial specified value | | | | | |
| Applicable standards | Voltage application treatment : According to JIS C5101-4 4.1 JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | | | | | | | |

Outline Drawing

Unit : mm

Coefficient of Frequency for Rated Ripple Current

| Frequency (Hz) | 50 | 120 | 1k | 10k | 30k |
|-------------------|------|-----|------|------|------|
| Rated voltage (V) | | | | | |
| 100 or less | 0.95 | 1 | 1.10 | 1.15 | 1.15 |
| 160 to 250 | 0.81 | 1 | 1.32 | 1.45 | 1.50 |
| 315 or more | 0.77 | 1 | 1.30 | 1.41 | 1.43 |

| Part numbering system | | | | | |
|---|----------------------|--------------------------|------------------------------|---------------|-----------------|

(Note) Rated ripple current : 85°C , 120Hz ; ESR. : 20°C , 120Hz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Miniaturized, High-Reliability, High-Ripple Capacitors

GREEN CAP 105°C
2000hours

- High-reliability, high-ripple capacitors.
- Guarantees 2000 hours at 105°C.

Marking color : White print on a black sleeve

Specifications

| Item | Performance | |
|---|---|---|
| Category temperature range (°C) | -40 to +105 (-25 to +105 at 160V or more) | |
| Tolerance at rated capacitance (%) | ± 20 (20°C, 120Hz) | |
| Leakage current (µA) (max.) | 3√CV (after 5 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C) | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 16 25 35 50 63 to 100 160 to 250 400 to 450 |
| | tanδ (max.) | 0.50 0.40 0.35 0.30 0.20 0.15 0.20 (20°C, 120Hz) |
| Characteristics at high and low temperature | Rated voltage (V) | 16 to 100 160 to 200 250 to 400 |
| | Impedance ratio (max.) | Z-25°C/Z+20°C 4 4 4 Z-40°C/Z+20°C 15 — — (120Hz) |
| Endurance (105°C) (Applied ripple current) | Test time | 2000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±20% of initial value |
| | Tangent of the loss angle | 200% or less of the initial specified value |
| Shelf life (105°C) | Test time | 1000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±15% of initial value |
| | Tangent of the loss angle | 150% or less of the initial specified value |
| Applicable standards | Voltage application treatment : According to JIS C5101-4 4.1 JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | |

Outline Drawing

Unit: mm

| Part numbering system | | | | | | |
|---|---|----------------------|--------------------------|------------------------------|---------------|-----------------|
| series LAH, standard terminal type :400V330µF | | | | | | |
| LAH | — | 400 V | 331 | M | S54 # B | |
| Series code | | Rated voltage symbol | Rated capacitance symbol | Capacitance tolerance symbol | Casing symbol | Optional symbol |
| series LTH, three terminals type :400V330µF | | | | | | |
| LTH | — | 400 V | 331 | M | S54 # B | |
| Series code | | Rated voltage symbol | Rated capacitance symbol | Capacitance tolerance symbol | Casing symbol | Optional symbol |

Coefficient of Frequency for Rated Ripple Current

| Rated voltage (V) | Frequency (Hz) | | | | |
|-------------------|----------------|-----|------|------|------|
| | 50 | 120 | 1k | 10k | 30k |
| 100 or less | 0.95 | 1 | 1.10 | 1.15 | 1.15 |
| 160 to 250 | 0.81 | 1 | 1.32 | 1.45 | 1.50 |
| 400 or more | 0.77 | 1 | 1.30 | 1.41 | 1.43 |

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

(Note) Rated ripple current : 105°C , 120Hz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

(Note) Rated ripple current : 105°C , 120Hz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Ultra Miniaturized, High-Reliability, High-Ripple Capacitors

GREEN
CAP

105°C
2000hours

- Best suited as input filters for various power supplies.
- Guarantees 2000 hours at 105°C.
- Best suited to On-Board-Charger for EV, PHEV.

Marking color : White print on a black sleeve

Specifications

| Item | Performance | |
|---|---|---|
| Category temperature range (°C) | -25 to +105 | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | |
| Leakage current (μA) (max.) | 3√CV (after 5 minutes) C : Rated capacitance (μF) ; V : Rated voltage (V) (20°C) | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 160 to 250 |
| | tanδ (max.) | 0.15 |
| Characteristics at high and low temperature | Percentage of capacitance change (%) | Within ±30% of the value at 20°C |
| | Impedance ratio (max.) | 4 |
| Endurance (105°C) (Applied ripple current) | Test time | 2000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±20% of initial value |
| | Tangent of the loss angle | 200% or less of the initial specified value |
| Shelf life (105°C) | Test time | 1000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±15% of initial value |
| | Tangent of the loss angle | 150% or less of the initial specified value |
| Applicable standards | Voltage application treatment : According to JIS C5101-4 4.1 JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | |

Outline Drawing

Unit : mm

| Part numbering system | | | | | |
|---|----------------------|--------------------------|------------------------------|---------------|-----------------|
| series LAT, standard terminal type :400V220μF | | | | | |

(Note) Rated ripple current : 105°C , 120Hz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

(Note) Rated ripple current : 105°C , 120Hz

High-Reliability, High-Ripple, Long Life Capacitors

GREEN CAP 105°C 3000hours

- High-reliability, high-ripple, long life capacitors.
- Guarantees 3000 hours at 105°C.
- Best suited to On-Board-Charger for EV, PHEV.

Marking color : White print on a black sleeve

Specifications

| Item | Performance | |
|---|---|--|
| Category temperature range (°C) | -40 to +105 (-25 to +105 at 160V or more) | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | |
| Leakage current (µA) (max.) | 3√CV (after 5 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C) | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 16 25 35 50 63 to 100 160 to 250 350 to 500 |
| | tanδ (max.) | 0.50 0.40 0.35 0.30 0.20 0.15 0.20 (20°C, 120Hz) |
| Characteristics at high and low temperature | Rated voltage (V) | 16 to 100 160 to 500 |
| | Impedance ratio (max.) | Z-25°C/Z+20°C 4 160 to 500 Z-40°C/Z+20°C 15 — (120Hz) |
| Endurance (105°C) (Applied ripple current) | Test time | 3000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±20% of initial value |
| | Tangent of the loss angle | 200% or less of the initial specified value |
| Shelf life (105°C) | Test time | 1000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±15% of initial value |
| | Tangent of the loss angle | 150% or less of the initial specified value |
| Applicable standards | Voltage application treatment : According to JIS C5101-4 4.1 JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | |

Outline Drawing

Unit: mm

| Part numbering system | | | | | |
|---|---|----------------------|--------------------------|------------------------------|----------------------------------|

(Note) Rated ripple current : 105°C , 120Hz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

LAX, LTX LARGE CAPACITANCE ALUMINUM ELECTROLYTIC CAPACITORS ELNA

Ultra Long Life, High-Reliability Capacitors

GREEN CAP 105°C 5000hours

Marking color : White print on a black sleeve

- Ultra Long Life, high-reliability capacitors.
- Guarantees 5000 hours at 105°C.
- Best suited to On-Board-Charger for EV, PHEV.

Specifications

| Item | Performance | |
|---|---|---|
| Category temperature range (°C) | -25 to +105 | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | |
| Leakage current (µA) (max.) | 3√CV (after 5 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C) | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 160 to 250 |
| | tanδ (max.) | 0.15 |
| Characteristics at high and low temperature | Percentage of capacitance change (%) | Within ±30% of the value at 20°C |
| | Impedance ratio (max.) | 4 (120Hz) |
| Endurance (105°C) (Applied ripple current) | Test time | 5000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±20% of initial value |
| | Tangent of the loss angle | 200% or less of the initial specified value |
| Shelf life (105°C) | Test time | 1000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±15% of initial value |
| | Tangent of the loss angle | 150% or less of the initial specified value |
| Applicable standards | Voltage application treatment : According to JIS C5101-4 4.1 JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | |

Outline Drawing

Unit: mm

| Part numbering system | | | | | |
|---|----------------------|--------------------------|------------------------------|---------------|-----------------|

(Note) Rated ripple current : 105°C , 120Hz

LJ6, LJ2 LARGE CAPACITANCE ALUMINUM ELECTROLYTIC CAPACITORS **ELNA**

Large-Capacitance, Long-Life, High-Reliability Capacitors

GREEN CAP

105°C
5000hours

- Large-capacitance, Long-life, High-reliability capacitors.
- Guarantees 5000 hours at 105°C.

Marking color : White print on a black sleeve

Specifications

| Item | Performance | |
|--|---|---|
| Category temperature range (°C) | -25~+105 | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | |
| Leakage current (µA) (max.) | 0.02CV or 5mA whichever is larger (after 5 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C) | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 200 to 500 |
| | tanδ (max.) | 0.15 (20°C, 120Hz) |
| Characteristics at high and low temperature | Percentage of capacitance change (%) | Within ±30% of the value at 20°C |
| | Impedance ratio (max.) | 4 (120Hz) |
| Endurance (105°C) (Applied ripple current) | Test time | 5000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±20% of initial value |
| | Tangent of the loss angle | 200% or less of the initial specified value |
| Shelf life (105°C) | Test time | 1000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±15% of initial value |
| | Tangent of the loss angle | 150% or less of the initial specified value |
| Voltage application treatment : According to JIS C5101-4 4.1 | | |
| Applicable standards | JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | |

LM, LPM LARGE CAPACITANCE ALUMINUM ELECTROLYTIC CAPACITORS ELNA

For-Inverter, High-Ripple Capacitors

GREEN CAP 85°C 2000hours

- Withstands high-ripple current generated by the voltage doubler rectifier system.
- Guarantees 2000 hours at 85°C.

Marking color : White print on a black sleeve

Specifications

| Item | Performance | |
|--|---|---|
| Category temperature range (°C) | -25 to +85 | |
| Tolerance at rated capacitance (%) | ±10 (20°C, 120Hz) | |
| Leakage current (µA) (max.) | 0.01CV or 5mA whichever is larger (after 5 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C) | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 250, 400 |
| | tanδ (max.) | 0.05 (20°C, 120Hz) |
| Characteristics at high and low temperature | Rated voltage (V) | 250, 400 |
| | Impedance ratio (max.) Z-25°C/Z+20°C | 4 (120Hz) |
| Endurance (85°C) (Applied ripple current) | Test time | 2000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±20% of initial value |
| | Tangent of the loss angle | 200% or less of the initial specified value |
| Shelf life (85°C) | Test time | 500 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±15% of initial value |
| | Tangent of the loss angle | 150% or less of the initial specified value |
| Voltage application treatment : According to JIS C5101-4 4.1 | | |
| Applicable standards | JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | |

Screw Terminal, Miniaturized, High Ripple Capacitors

GREEN CAP 85°C 5000hours

- Screw Terminal, Miniaturized, High Ripple capacitors.
- Guarantees 5000 hours at 85°C.

Marking color : Silver print on a black sleeve

Specifications

| Item | Performance | | | |
|--|---|---|----------|------|
| Category temperature range (°C) | -25 to +85 | | | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | | | |
| Leakage current (μA) (max.) | 0.01CV or 5mA whichever is larger (after 5 minutes) C : Rated capacitance (μF) ; V : Rated voltage (V) (20°C) | | | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 400, 450 | 500, 550 | 600 |
| | tanδ (max.) | 0.15 | 0.20 | 0.25 |
| Endurance (85°C) (Applied ripple current) | Test time | 5000 hours | | |
| | Leakage current | The initial specified value or less | | |
| | Percentage of capacitance change | Within ±20% of initial value | | |
| | Tangent of the loss angle | 200% or less of the initial specified value | | |
| Shelf life (85°C) | Test time | 1000 hours | | |
| | Leakage current | The initial specified value or less | | |
| | Percentage of capacitance change | Within ±20% of initial value | | |
| | Tangent of the loss angle | 200% or less of the initial specified value | | |
| Voltage application treatment : According to JIS C5101-4 4.1 | | | | |
| Applicable standards | JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | | | |

(Note) Rated ripple current : 85°C, 120Hz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

(Note) Rated ripple current : 85°C , 120Hz

Aluminum Electrolytic Capacitors for Audio

Chip Type Audio Use Capacitors

GREEN CAP SMD For Audio

- Audio grade surface mount product with completely new components using synthetic mica paper for the separator.
- Both quality sense and sound field that could not be realized by the surface mount products are reproducible.

Marking color : Black print (φ4 to φ10)

For higher grade

Specifications

| Item | Performance | | | | | | | | |
|---|---|---|------|------|------|------|------|----|----|
| Category temperature range (°C) | -40 to +85 | | | | | | | | |
| Tolerance at rated capacitance (%) | ±20 (20°C, 120Hz) | | | | | | | | |
| Leakage current (μA) (max.) | 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (μF) ; V: Rated voltage (V) (20°C) | | | | | | | | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 6.3 | 10 | 16 | 25 | 35 | 50 | | |

(Note) Rated ripple current : 85°C, 120Hz.

NOTE : Design, Specifications are subject to change without notice. It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Chip Type, For Audio, High Grade (SILMIC) Capacitors

GREEN CAP

SMD

For Audio

- Silk fiber paper products used surface mount device.
- Completely new audio products for the high-grade paper using silk fiber paper.
- Silk "flexibility" to reduce the vibration energy of the music, in the sense of high-frequency peak, a significant decrease in roughness of the midrange and bass increase.

Marking color : Black print

(Note) Rated ripple current : 85°C, 120Hz

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

■ SILMIC series Silk fiber using audio purpose capacitor

- ELNA developed new raw material for the separate paper which use a silk fibers. Therefore, this capacitor can give you high grade sound for your audio design.
- Due to the silk fiber's pliability, the capacitor makes a dream of the high quality sound.

For examples ;

- To relieve the music's vibration energy.
- To decrease the peak feeling sound at high compass and rough quality sound at middle compass.
- To increase massive sound at low compass.
- For bipolar capacitors, consult with us.

Marking color : White print on a brown sleeve

Miniature High Grade Capacitors for Audio(SILMIC II)

GREEN CAP

For Audio

- All lead wires oxygen-free copper for extremely low distortion. (Third high frequency distortion 10kHz,0.1A,-120dB or less)
- "SILMIC II" mark on sleeve.

(Note) Rated ripple current : 85°C, 120Hz

NOTE : Design, Specifications are subject to change without notice. It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Miniature Capacitors for Audio (PURECAP)

GREEN CAP For Audio

Marking color : Gold print on a black sleeve

- A standard capacitor utilizing a newly developed material for a high grade of audio reproduction.
- All lead wires are copper plated steel wires.
- New type miniaturized capacitor for audio, using synthetic mica paper for the separator.

Specifications

| Item | Performance | |
|---|---|--|
| Category temperature range (°C) | -40 to +85 | |
| Tolerance at rated capacitance (%) | ±20 (20°C,120Hz) | |
| Leakage current (µA) (max.) | 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C) | |
| Tangent of loss angle (tanδ) | Rated voltage (V) | 6.3 10 16 25 35 50 63 100 |
| | tanδ (max.) | 0.22 0.19 0.16 0.14 0.12 0.10 0.09 0.08 |
| 0.02 is added to every 1000µF increase over 1000µF (20°C,120Hz) | | |
| Endurance (85°C) (Applied ripple current) | Test time | 1000 hours |
| | Leakage current | The initial specified value or less |
| | Percentage of capacitance change | Within ±20% of initial value |
| | Tangent of the loss angle | 150% or less of the initial specified value |
| Shelf life (85°C) | Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4 4.1 | |
| Applicable standards | JIS C5101 - 1, - 4 (IEC 60384 - 1, - 4) | |

1 General Description of Aluminum Electrolytic Capacitors

1-1 The Principle of Capacitor

The principle of capacitor can be presented by the principle drawing as in Fig.1-1.

When a voltage is applied between the metal electrodes placed opposite on both surfaces of a dielectric, electric charge can be stored proportional to the voltage.

$$Q = C \cdot V$$

Q : Quantity of electricity (C)

V : Voltage (V)

C : Capacitance (F)

Fig.1-1

C, called the capacitance of capacitor, is expressed by the following expression with the electrode area S[m²], the electrode spacing t [m] and the dielectric constant of dielectric “ε”:

$$C[F] = \epsilon_0 \cdot \epsilon \cdot \frac{S}{t}$$

ε₀ : Dielectric constant in vacuum (=8.85×10⁻¹²F/m)

The dielectric constant of an aluminum oxide film is 7 to 8. Larger capacitances can be obtained by enlarging the electrode area S or reducing t.

Table 1-1 shows the dielectric constants of typical dielectrics used in the capacitor. In many cases, capacitor names are determined by the dielectric material used, for example, aluminum electrolytic capacitor, tantalum capacitor, etc.

Table 1

| Dielectric | Dielectric Constant | Dielectric | Dielectric Constant |
|---------------------|---------------------|---------------------|---------------------|
| Aluminum oxide film | 7 to 8 | Porcelain (ceramic) | 10 to 120 |
| Mylar | 3.2 | Polystyrene | 2.5 |
| Mica | 6 to 8 | Tantalum oxide film | 10 to 20 |

Although the aluminum electrolytic capacitor is small, it has a large capacitance. It is because the electrode area is roughened by electrochemical etching, enlarging the electrode area and also because the dielectric is very thin.

The schematic cross section of the aluminum electrolytic capacitor is as in Fig.1-2.

Fig.1-2

1-2 Equivalent Circuit of the Capacitor

The electrical equivalent circuit of the aluminum electrolytic capacitor is as presented in the following figure.

R1 : Resistance of terminal and electrode

R2 : Resistances of anodic oxide film and electrolyte

R3 : Insulation resistance because of defective anodic oxide film

D1 : Oxide semiconductor of anode foil

C1 : Capacity of anode foil

C2 : Capacity of cathode foil

L : Inductance caused by terminals, electrodes, etc.

2 About the Life of an Aluminum Electrolytic Capacitor

2-1 Estimation of life with minimal ripple current (negligible).

Generally, the life of an aluminum electrolytic capacitor is closely related with its ambient temperature and the life will be approximately the same as the one obtained by Arrhenius' equation.

$$L = L_0 \times 2^{\left(\frac{T_0 - T}{10}\right)} \dots\dots\dots(1)$$

Where L : Life at temperature T

L₀ : Life at temperature T₀

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

2-2 Estimation of life considering the ripple current.

The ripple current affects the life of a capacitor because the internal loss (ESR) generates heat. The generated heat will be :

$$P = I^2R \dots\dots\dots(2)$$

Where I : Ripple current (Arms)

R : ESR (Ω)

With increase in the temperature of the capacitor:

$$\Delta T = \frac{I^2 \times R}{A \times H} \dots\dots\dots(3)$$

Where ΔT : Temperature increase in the capacitor core(deg.)

I : Ripple current (Arms)

R : ESR (Ω)

A : Surface area of the capacitor (cm^2)

H : Radiation coefficient (Approx. 1.5 to 2.0 $\times 10^{-3}W/cm^2 \times ^\circ C$)

The above equation (3) shows that the temperature of a capacitor increases in proportion to the square of the applied ripple current and ESR, and in inverse proportion to the surface area. Therefore, the amount of the ripple current determines the heat generation, which affects the life. The value of ΔT varies depending on the capacitor types and operating conditions. The usage is generally desirable if ΔT remains less than $5^\circ C$. The measuring point for temperature increase due to ripple current is shown below ;

Test results:

(1) The life equation considering the ambient temperature and the ripple current will be :

$$L = L_d \times 2^{\left(\frac{T_0 - T}{10}\right)} \times K^{\left(\frac{-\Delta T}{10}\right)} \dots\dots\dots(4)$$

Where L_d : Life at DC operation (h)

K : Ripple acceleration factor

($K=2$, within allowable ripple current)

($K=4$, if exceeding allowable ripple current)

T_0 : Upper category temperature ($^\circ C$)

T : Operating temperature ($^\circ C$)

ΔT : Temperature increase at capacitor core (deg.)

(2) The life equation based on the life with the rated ripple current applied under the maximum guaranteed temperature will be a conversion of the above equation (4), as below :

$$L = L_r \times 2^{\left(\frac{T_0 - T}{10}\right)} \times K^{\left(\frac{\Delta T_0 - \Delta T}{10}\right)} \dots\dots\dots(5)$$

Where L_r : Life at the upper category temperature with the rated ripple current (h)

ΔT_0 : Temperature increase at capacitor core, at the upper category temperature (deg.)

(3) The life equation considering the ambient temperature and the ripple current will be a conversion of the above equation (5), as below :

$$L = L_r \times 2^{\left(\frac{T_0 - T}{10}\right)} \times K^{\left\{1 - \left(\frac{I}{I_0}\right)^2\right\}} \times \frac{\Delta T_0}{10} \dots\dots\dots(6)$$

Where I_0 : Rated ripple current at the upper category temperature (Arms)

I : Applied ripple current (Arms)

(4) The life equation considering the ambient temperature, ripple current and applied voltage will be the below (7) by adding the effectiveness of the voltage deration.

(Apply to the rated voltage 200V to 500V of LA*, LT*, LJ* series)

$$L = L_r \cdot 2^{\left(\frac{T_0 - T}{10}\right)} \cdot K^{\left\{1 - \left(\frac{I}{I_0}\right)^2\right\}} \cdot \frac{\Delta T_0}{10} \cdot \left(\frac{V_r}{V_a}\right)^{2.5} \dots\dots\dots(7)$$

V_r : Rated voltage (V)

V_a : Applied voltage (V)

Except, when $V_a/V_r < 0.6$, fix to $V_a = V_r \times 0.6$

ΔT_0 of each category highest temperature

| | | | | | | | |
|--|---|-----|---------|------------|---------|-----|---------|

| 105 | : 15deg | | | | | | |
| 125 | : 10deg | | | | | | |
| 135 | : 10deg | | | | | | |

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Since it is actually difficult to measure the temperature increase at the capacitor core, the following table is provided for conversion from the surface temperature increase to the core temperature increase.

Table 2-1

| | | | | | | | |
|----------------|-----|---------|------|-------|-----|-----|------|
| Case diameter | ~10 | 12.5~16 | 18 | 20~22 | 25 | 30 | 35 |
| Core / Surface | 1.1 | 1.2 | 1.25 | 1.3 | 1.4 | 1.6 | 1.65 |

The life expectancy formula shall in principle be applied to the temperature range between the ambient temperature of +40°C and upper category temperature. The expected life time shall be about fifteen years at maximum as a guide in terms of deterioration of the sealant.

(Fig. 2-1 Life Expectancy Chart)

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

2-3 Practical Examples of Life Expectancy

As practical examples of life expectancy, we introduce 250V 560 μ F in the LAT Series considering the effect of high-frequency component. Figures 2-2 to 2-4 show the simulated ripple current waveforms when the high-frequency component for switching is superimposed on the commercial frequency component.

Fig.2-2 Ripple Current Waveform of Capacitor

Fig.2-3 Low-frequency component

Fig.2-4 High-frequency component

Each of the above may be obtained as the effective ripple current value. Assuming that the ripple current waveform of the low-frequency component is generally approximated to the full-wave rectification waveform as shown in Fig.2-3, we obtain the effective ripple current value I_L as follows:

$$I_L = \frac{I_{PL}}{\sqrt{2}} = 0.707 \times I_{PL}$$

Since the ripple current waveform of the high-frequency component is approximated to the rectangular as shown in Fig.2-4, the effective current value of high-frequency component I_H is given by

$$I_H = \sqrt{\frac{1}{T} \int_0^{t_1} I_{PH}^2 dt} = I_{PH} \sqrt{\frac{t_1}{T}}$$

The reason why the ripple current affects the life is due to the heat generated by the ESR (R) of capacitor.

That is, ΔT by heat generation can be expressed by

$$\Delta T \propto I^2 \times R \text{ from Expression (2).}$$

Therefore, when ripple currents with different frequencies are handled, each current value must first be squared and then summed. That is:

$$I = \sqrt{(I_L)^2 + (I_H)^2}$$

Now, we proceed to specific examples assuming that the effective ripple current values of low-and high-frequencies have been obtained by the above methods.

Data A (Test piece and basic data)

| | |
|--------------|-------------------------------------|
| Product name | : 250V 560 μF φ 30x30 L, Series LAT |
| L_r | = 2000 hours |
| K | = 4 |
| T_0 | = 105°C |
| ΔT_0 | = 5deg |
| I_0 | = 1.80Arms at 105°C, 120Hz |

To verify the effect of the high-frequency component, the expected life will be calculated for each of three high-frequency ripple current conditions.

Data B

| | |
|----------|--|
| I_L | = 2.4Arms at 120Hz, $T=45^\circ\text{C}$ |
| I_{H1} | = 0.36Arms at 1kHz (corresponding to 15% of the commercial frequency component) |
| I_{H2} | = 0.72Arms at 10kHz (corresponding to 30% of the commercial frequency component) |
| I_{H3} | = 1.2Arms at 30kHz (corresponding to 50% of the commercial frequency component) |

For Data B, the currents are converted to 120Hz by the frequency conversion factor for the cases of ignorance of the high-frequency component, and each high-frequency component condition.

$$I = 2.4/1 = 2.4\text{A}$$

$$I_1 = \sqrt{(2.4)^2 + (0.36/1.32)^2} \doteq 2.42\text{A}$$

$$I_2 = \sqrt{(2.4)^2 + (0.72/1.45)^2} \doteq 2.45\text{A}$$

$$I_3 = \sqrt{(2.4)^2 + (1.2/1.50)^2} \doteq 2.53\text{A}$$

Explained here is about the frequency conversion factor. As described above, the heat generation (or temperature rise = ΔT) affecting the life is proportional to the ESR of capacitor. In addition, the fundamental frequency is 120Hz in measurement of capacitor characteristics, and the ripple current is also specified with this frequency; it is thus more convenient to calculate by converting the current value to that with the same temperature rise at 120Hz.

The ESR of aluminum electrolytic capacitor is frequency dependent.

Fig.2-5 Frequency Characteristics of ESR

Figure 2-5 shows a typical example of frequency characteristics of ESR, indicating that the ESR decreases with increasing frequencies. Therefore, the high-frequency component has less effect on the heat generation of capacitor than low-frequency component.

Next, we calculate the expected life according to each condition to compare with the case with no high-frequency component.

For the case with no high-frequency component:

$$L = 2000 \times 2 \left(\frac{105-45}{10} \right)_{x4} \left[1 - \left(\frac{2.4}{1.80} \right)^2 \right] \times \frac{5}{10} \doteq 74,658 \text{ hours}$$

For the case with high-frequency component:

$$L = 2000 \times 2 \left(\frac{105-45}{10} \right)_{x4} \left[1 - \left(\frac{2.42}{1.80} \right)^2 \right] \times \frac{5}{10} \doteq 73,479 \text{ hours}$$

73,479/74,658=0.984, about a 1.6% reduction in life

$$L = 2000 \times 2 \left(\frac{105-45}{10} \right)_{x4} \left[1 - \left(\frac{2.48}{1.80} \right)^2 \right] \times \frac{5}{10} \doteq 70,822 \text{ hours}$$

70,822/74,658=0.949, about a 5.1% reduction in life

$$L = 2000 \times 2 \left(\frac{105-45}{10} \right)_{x4} \left[1 - \left(\frac{2.61}{1.80} \right)^2 \right] \times \frac{5}{10} \doteq 65,105 \text{ hours}$$

65,105/74,658=0.872, about a 12.8% reduction in life

As described above, there may be cases where the effect of larger high-frequency component on the life cannot be ignored; thus high-frequency component exceeding 30% with respect to the current with fundamental frequency should be considered.

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

3 To calculate Balance when connecting in series

3-1 Circuit layout

Circuit for connecting two capacitors (C1, C2) in series and equivalent circuit can be illustrated as below figure. Formula to calculate a balance resistance R_B of below figure is shown as follows.

Following are the preconditions of the circuit.

- ① V_2 shall be the rated voltage ($=V_0$). ($V_1 < V_2$)
- ② V shall be a times $V_0 \times 2$. $V = 2aV_0$ ($a < 1$)
- ③ R_2 shall equal $R_1 \times b$. ($b < 1$) (1)

3-2 Formulas to calculate $[R_B]$

3-2-1 Following formula can be established from balanced condition.

$$V_1 \left[\frac{1}{R_1} + \frac{1}{R_B} \right] = V_2 \left[\frac{1}{R_2} + \frac{1}{R_B} \right] \quad (2)$$

3-2-2 Following formula can be established from preconditions.

$$V_2 \leq V_0 \quad (3)$$

$$V_1 = V - V_2 \quad (4)$$

$$= 2aV_0 - V_2 \quad (4')$$

3-2-3 Put formulas (1), (3) and (4') in formula (2).

$$(2aV_0 - V_2) \left[\frac{R_1 + R_B}{R_1 \times R_B} \right] = V_2 \left[\frac{bR_1 + R_B}{bR_1 \times R_B} \right]$$

$$2abV_0(R_1 + R_B) = V_2 \{b(R_1 + R_B) + bR_1 + R_B\}$$

$$2ab(R_1 + R_B) \leq 2bR_1 + (1+b)R_B$$

Accordingly, balance resistance R shall be the following formula.

$$R_B \leq 2bR_1 \frac{(1-a)}{(2a-1) \times b-1} \quad (5)$$

3-3 Calculation Example

Calculate the value of the balance resistance in the case of connecting two 400V 470 μ F (LC standard value : 1.88mA) capacitors in series.

$$R_1 = \frac{400(V)}{1.88(mA)} = 213(k\Omega)$$

If $a=0.8$, $400(V) \times 2 \times 0.8 = 640(V)$ as an impressed voltage.

If $b=2$, $R_2 = b R_1 = 426(k\Omega)$, $LC = 0.94(mA)$.

Balance resistance R_B will be.

$$R_B \leq 2 \times 2 \times 213(k\Omega) \frac{(1-0.8)}{(2 \times 0.8) \times 2 - 1} = 852(k\Omega)$$

4 Regarding Recovery Voltage

• After charging and then discharging the aluminum electrolytic capacitor, and further causing short-circuit to the terminals and leave them alone, the voltage between the two terminals will rise again after some interval. Voltage caused in such case is called recovery voltage. Following is the process that causes this phenomenon :

- When the voltage is impressed on a dielectric, electrical transformation will be caused inside the dielectric due to dielectric action, and electrification will occur in positive-negative opposite to the voltage impressed on the surface of the dielectric. This phenomenon is called polarization action.
- After the voltage is impressed with this polarization action, and if the terminals are discharged till the terminal voltage reaches 0 and are left open for a while, an electric potential will arise between the two terminals and thus causes recovery voltage.
- Recovery voltage comes to a peak around 10 to 20 days after the two terminals are left open, and then gradually declines. Recovery voltage has a tendency to become bigger as the component (stand-alone base type) becomes bigger.
- If the two terminals are short-circuited after the recovery voltage is generated, a spark may scare the workers working in the assembly line, and may put low-voltage driven components (CPU, memory, etc.) in danger of being destroyed. Measures to prevent this is to discharge the accumulated electric charge with resistor of about 100 to 1k Ω before using, or ship out by making the terminals in short-circuit condition by covering them with an aluminum foil at the production stage. Please consult us for adequate procedures.

5 Electrode Foil Development Technology

5-1 Corrosion inhibition of cathode foil

Inactive treatment is implemented to ensure long life by inhibiting natural corrosion of the cathode foil. Fig. 3-1 shows its effects with values of the polarization resistance inversely proportional to the corrosion rate using the AC impedance method (FRA). This indicates that the cathode foil used in the High reliability capacitors has the polarization resistance higher than that of the conventional capacitors owing to corrosion inhibition.

Fig. 3-1

5-2 Sealing material permeability of electrolyte

To ensure long life, a low permeable lactone solvent for the sealing material is used as the main solvent of the electrolyte of the High reliability capacitor. Fig. 3-2 shows the test results on the permeability obtained by changing the weight of the capacitors produced with different types of electrolytes at a high temperature.

Fig. 3-2

5-3 Airtightness of sealing material

Since the electrolyte is stable for hours, the key element for capacitor's life is the sealing material. By optimizing the crosslinking density of the sealing material polymer, the sealing material of the High reliability capacitor attains its long life with electrolyte permeability less than that of the conventional capacitors.

Fig. 3-3 shows the test results on the airtightness of the sealing material obtained by changing the weight of the capacitors at a high temperature, producing capacitors with the conventional sealing material and improved one both containing the electrolyte used in the High reliability capacitor.

Fig. 3-3

5-4 Long-time stability of electrolyte

The electrolyte used in the High reliability capacitor is stable with low initial resistivity and small secular changes at a high temperature. Fig. 3-4 shows change in resistivity at 105°C.

Fig. 3-4

5-5 Dielectric formation voltage and leakage current characteristics of anode foil

To increase the operating life by controlling the gas generation inside capacitor because of 1.5 to 2 times the rated voltage, while that of the previous capacitor is about 1.3 times the rated voltage.

Fig. 3-5

5-6 Lowered ESR of Electrode Foil

To reduce the ESR of electrolytic capacitor, we have improved our chemical conversion technology for anode foil to develop lower ESR electrode foil compared to the conventional product as shown in Fig. 3-6

Fig. 3-6 ESR Index of Anode Foil

NOTE : Design, Specifications are subject to change without notice.

NOTE : Design, Specifications are subject to change without notice. It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

■ Systematized Classification of Electric Double Layer Capacitors

DYNACAP "POWERCAP"

For memory backup

For power & energy

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Product Symbol System for Electric Double Layer Capacitors

- ①
Series code
- ②
Max operating Voltage symbol
- ③
Shape symbol
- ④
Rated Capacitance symbol
- ⑤
Casing symbol
- ⑥
Plating symbol
- ⑤
Casing symbol
- ⑦
Optional symbol
- ⑧
Terminal symbol
- ⑨
Taping lead-forming symbol

① **Series code**
Please refer to the page of each series.

② **Max operating voltage symbol**

Example

| Max.operating voltage (V) | Voltage symbol |
|---------------------------|----------------|
| 2.5 | 2R5 |
| 2.7 | 2R7 |
| 3.0 | 3 |
| 3.3 | 3R3 |
| 3.6 | 3R6 |
| 5.0 | 5 |
| 5.5 | 5R5 |
| 6.3 | 6R3 |

④ **Rated capacitance symbol**

Example

| Capacitance (F) | Capacitance symbol | Capacitance (F) | Capacitance symbol |
|-----------------|--------------------|-----------------|--------------------|
| 0.047 | 473 | 10 | 106 |
| 0.07 | 703 | 15 | 156 |
| 0.1 | 104 | 20 | 206 |
| 0.2 | 204 | 22 | 226 |
| 0.22 | 224 | 25 | 256 |
| 0.33 | 334 | 30 | 306 |
| 0.4 | 404 | 33 | 336 |
| 0.47 | 474 | 40 | 406 |
| 0.68 | 684 | 50 | 506 |
| 0.9 | 904 | 100 | 107 |
| 1 | 105 | 200 | 207 |
| 1.5 | 155 | 300 | 307 |
| 2.7 | 275 | | |
| 3.3 | 335 | | |
| 4.7 | 475 | | |
| 5.6 | 565 | | |
| 6.8 | 685 | | |

③ **Shape symbol**

Please refer to the page of each series.

⑤ **Casing symbol**

Please refer to the page of each series.

⑥ **Plating symbol**

Example

| Symbol | Contents |
|--------|----------------------------------|
| U | Sn 100% plating or Sn+Cu plating |
| T | Sn 100% plating |

⑦ **Optional symbol**

Example (For Automotive)

| Symbol | Contents |
|--------|-------------------|
| Q | Based on AEC-Q200 |
| M | Based on AEC-Q200 |

⑧ **Terminal symbol**

Please refer to the page of each series.

⑨ **Taping, Lead-forming symbol**

Please refer to the lead forming and taping page.
When taping or lead-forming is not necessary, leave the boxes blank.

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

Recommended soldering conditions (Lead Free)

- Series DS, DSK, DVN, DVL, DVS

Reflow soldering conditions.

Profile

1. Preheating shall be under 150°C within 120 seconds.
2. Peak temperature shall be within the following table.
3. For conditions exceeding the tolerances, consult with us.

T200 : Duration while capacitor head temperature exceeds 200°C (s).

T217 : Duration while capacitor head temperature exceeds 217°C (s).

T230 : Duration while capacitor head temperature exceeds 230°C (s).

The measurement temperature point is the case top.

| Series | Size | Peak temp. (5sec or less) | T230 | T217 | T200 | Reflow cycle |
|-------------------|-------|------------------------------|-------------|-------------|-------------|-----------------|
| DS DSK | φ6.8 | 250°C Max. | 20sec. max. | 30sec. max. | 40sec. max. | 2 times or less |
| DVN DVL DVS | φ12.5 | 260°C Max. | 20sec. max. | 30sec. max. | 50sec. max. | 2 times or less |

Attention : Carry out soldering work at low temperature and in the shortest time within above conditions.

Do NOT reflow solder, when cell voltage is above 0.5V.

* Please consult with us about reflow soldering conditions other than the above.

Recommended soldering conditions (Lead free)

● Electric Double Layer capacitors

(1) Soldering iron conditions

Iron tip temperature should be $400^{\circ}\text{C} \pm 5^{\circ}\text{C}$ within the duration of 4 seconds.

(2) Flow soldering conditions

The recommendation soldering conditions of the product in which flow soldering is possible are as graph.

| Type | Series | Size | Preheat | | Peak | |
|------------------|---|----------------------------|------------------------------|--------------|---|-------------|
| | | | Temperature | Time | Temperature | Time |
| Coin cell | DB,DBN,DBJ DBS,DX,DXN DXJ,DXS,DH DHL,DHC | $\phi 11.5$ to $\phi 21.5$ | 100 to 110°C | 30sec. max. | 260°C Max | 5sec. max. |
| Cylindrical cell | DZ,DZH,DZN DDU,DUK,DZP | $\phi 6.3$ to $\phi 35$ | 100 to 130°C | 30 to 60sec. | $260^{\circ}\text{C} \pm 5^{\circ}\text{C}$ | 10sec. max. |

Cautions when soldering

- (1) Do not dip the capacitor into melted solder.
- (2) Do not flux other part than the terminals.
- (3) If there is a direct contact between the sleeve of the capacitor and the printed circuit pattern or a metal part of another component such as a lead wire, it may cause shrinkage or crack.
- (4) If it is a coin type, please manage so that main part temperature including preheating does not exceed 90°C .
- (5) Please refer to cautions for using and the specification about other notes.

Carrier tape dimensions (Series DS, DSK) polarity L

(Unit : mm)

Please inquire for details.

Cautions for Using Electric Double Layer Capacitors (DYNACAP)

■ Usage

1. Electric double layer capacitors (EDLC) use a conductive organic electrolyte.

The use at excessive mounting temperature or exceeding the upper category temperature can cause the electrolyte to leak. Especially, coin and multilayer coin types for the memory backup excluding the DZ, DZH, DZN, DDU, DUK, DZP series use a low elastic plastic as the sealant in the cell construction like coin batteries; therefore, avoid using such capacitors in the Vicinity of automotive equipment with steep temperature change, and heating element such as motor, relay, transformer, power IC, etc. because of the risk of leakage of electrolyte.

2. Since EDLC is polarized, do not apply a reversed voltage.

EDLC is polarized. If a reversed voltage is applied for a long time, the leakage current will increase abruptly, which may cause a decrease in the capacity, an increase in the internal resistance, and causing leakage or damage to the product in some cases.

3. Do not apply any voltage higher than the Max. operating voltage (this means the surge voltage in the case of short-time charge).

If an overvoltage is applied to the product, the leakage current will increase abruptly and the product will become overheated, which may cause a decrease in the capacity, an increase in the internal resistance, and causing leakage or damage to the product in some cases.

4. Do not use smoothing a power supply (for absorbing its ripple).

Since the internal resistance of EDLC is high, the product will be overheated if it is used for smoothing a power supply (for absorbing its ripple), which may cause a decrease in the capacity, an increase in the internal resistance, and causing leakage or damage to the product in some cases .

5. Do not use in a circuit where quick charge and discharge are repeated Very often.

In a circuit where quick charge and discharge are repeated very often , the product will become overheated, which may cause a decrease in the capacity, an increase in the internal resistance, and causing leakage or damage to the product in some cases.

Reduce the charge and discharge currents while selecting a product with low internal resistance, and make sure that the product surface temperature does not rise.

6. EDLC life depends heavily on the ambient temperature.

①The lifetime of EDLC is seriously affected by change in ambient temperature. If the temperature is lowered by 10°C, the lifetime will be approximately doubled. Therefore, the product should be used at a temperature lower than the guaranteed maximum value for maximum life.

②If the capacitor is used at a temperature exceeding its maximum guaranteed temperature, not only is its life shortened, but increased vapor pressure of electrolyte or electrochemical reactions may increase the internal pressure, and causing leakage or damage to the product in some cases.

7. Do not use the product in an ambient atmosphere containing waterdrops (condensation) or toxic gases.

Although EDLC is sealed, water droplets or toxic gases may do degradation characteristics, a leakage and corrode the lead wires and the case, which may cause a breaking of the wires.

Avoid abrupt temperature changes, which may cause water droplets, resulting in product deterioration and electrolyte leakage.

8. Contact us before connecting the products in series.

A series connection will cause imbalance in the voltage, charged to the capacitors and an overvoltage may be charged to one or more them. This may cause a decrease in the capacity, an increase in the internal resistance and causing leakage or damage to the product in some cases. When using series connection for several capacitors, please derate the applied voltage from the Max. operating voltage or use balancing circuits (bleeder resistor, etc.) to compensate for the imbalance in the applied voltage for each capacitor. Moreover, please ensure the arrangement does not cause temperature fluctuation between capacitors.

9.About vibration.

A terminal blank, a terminal bend, and a crease may occur by adding too much vibration to a capacitor.

Moreover, depending on the case, an EDLC may do degradation of the characteristic, breakage, and a leakage.

When you become too much vibration, please contact us.

10.When used on a double sided printed circuit board, do not overlap the wiring patterns on the mounted part.

A short circuit may be created by certain wiring conditions. Should the electrolyte leaks, the circuit pattern may cause a short circuit, resulting in tracking or migration.

11.Do not keep In high temperature and high humidity atmospheres.

①Avoid high temperature or high humidity or direct rays when storing capacitors.

② Keep the product in a place where the temperature is 5°C to 30°C and the humidity is lower than 60%. Avoid an abrupt temperature change, which may cause condensation or deterioration of the product or liquid leakage. (Recommended storage term: 1year or less after delivery)

③ Do not store EDLC at a place where there is a possibility that they may get water, salt or oil spill.

④ Do not store EDLC at place where the air contains dense hazardous gas (hydrogen sulfide, sulfuric acid, nitrous acid, chlorine ammonia, etc.).

⑤ Fumigation treatment with toxic gas covering the whole wooden container frames as moth proofing during shipment may leave residual toxic gas.

⑥ Do not store EDLC at a place where it gets ultraviolet ray or radioactive ray.

12. Capacitors fitted with a relief valve

① The relief valve is provided with a valve function with part of the case made thin to avoid explosion by increased internal pressure when the capacitor is under abnormal load such as overvoltage or reverse voltage. After activation of the relief valve, the capacitor must be replaced as it does not restore.

② For the capacitors with a case relief valve (series DZ, DZH, DZN, DDU, DUK, DZP), provide a void on the top of the relief valve so as not to hamper its activation. Make a void of 2 mm or more for the product of $\phi 18$ or less in diameter, and a void of 3 mm or more for the product of $\phi 20$ to $\phi 35$ mm in diameter on the top.

13. Use at a high altitude

The use of capacitors at high altitudes such as on an airplane causes a large difference between the internal pressure of the capacitors and the atmospheric pressure.

However, there is no problem in use under atmospheric pressure up to about an altitude of 10,000 meters.

If the condition is severe like space, please contact us.

■ Mounting

1. Do not overheat when soldered.

Depending on the type and size of the board, the product may be subjected to overheat, leading to loss of airtightness. This may greatly shorten the product life or cause liquid leakage.

In case of a 1.6mm-thick and single side printed board, for example, keep the following soldering conditions: temperature lower than 260°C, time within 5 seconds (coin type), 10 seconds (Cylindrical type).

When a board thinner than 1.6 mm or multi-layer printed board is used, contact us.

In the case of hand soldering, the iron tip temperature is lower than 400°C, time is shorter than 4 seconds.

The coin types and multilayer coin types excluding the DZ and reflow-compatible coin types use polypropylene as the packing material for sealing and therefore susceptible to excessive heat. Note that the component body temperature shall be controlled so as not to exceed 90°C including preheating.

2. When soldering the capacitor to the wiring board, do not attach the body of the capacitor to the circuit board.

If the body of the capacitor is attached directly to the circuit board, the flux or solder can blow through the through holes in the circuit board, negatively impacting the capacitor.

Moreover, the heat influence at the time of soldering can be reduced by floating the body.

3. Contact us when cleaning is necessary after soldering.

Certain types of solvents are not compatible and may cause damage.

4. Contact us when the product is attached by adhesive bonding.

Certain types of adhesives are not compatible.

Paste bond partially between the product and the board so that the product will not adhere completely to the board.

Do not raise the temperature over the guaranteed value while the bond is hardening.

5. Heating conditions of adhesive curing oven

During heating of the adhesive curing oven, application of excessive heat may significantly shorten the product life or cause liquid leakage. Control the body temperature so as not to exceed 90°C during work while setting the allowable atmospheric temperature below 110°C, and allowable heating time within 30 seconds.

For the heating conditions deviating from the above, consult with us providing your temperature profile conditions.

6. Be careful not to apply an excessive force to the capacitor body, terminals or lead wires.

① Mount the capacitor while making sure that the terminal spacing of the capacitor and the spacing of the holes in the printed wiring board are aligned.

② If the capacitor body is subjected to stress such as grabbing, falling, bend, pushing or twisting after mounted, its terminals may come off, leading to open, short or liquid leakage.

■ Other cautions

1. Emergency procedures

If the EDLC overheats or starts to smell, immediately switch off the units main power supply to stop operation.

Keep your face and hands away from the EDLC, since the temperature may be high enough to cause the EDLC to ignite and burn.

2. Periodical inspections should be established for the EDLC used in industrial appliances.

The following items should be checked:

① Appearance : Check if there is leakage.

② Electronic performance : Check the leakage current, the electrostatic, the internal resistance and other items described in the catalog or the product specifications.

3. Disposing of EDLC

① Punch a hole or crush the EDLC (to prevent explosion) before incineration at approved facility.

② If they are not to be incinerated, bring them to a professional industrial waste disposal company.

4. Other notes

Please refer to the following literature for anything not described in the specification or the catalog. (Technical Report of Japan Electronics and Information Technology Industries Association #EIAJ RCR-2370 "Guideline of notabilia for fixed electric double layer capacitors")

5.5V SMD, Low Resistance Capacitors

GREEN CAP

SMD

70°C

Marking color : White print on an brown sleeve

- Size : $\phi 12.5 \times 8.5$ mm, compatible with surface mounting and low ESR.
- Unlike batteries, safe and high reliability without containing active and hazardous substance.
- Unlike batteries, excellent charge and discharge characteristics with no chemical reactions.
- Responds to temperature 260°C during the reflow peek.
- Ideal for industrial, smart meter, backing up of RTC's for surveillance camera, momentary power assistance of a battery etc.

| 3.6 | 0.33 | DVS-3R6D334T-R5 | 12.5×8.5 |

- *soldering conditions are described on Individual page.
- *It can discharge with 1.5 times as much current (mA) as rated capacitance.

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

5.5V Standard Capacitors

GREEN CAP

70°C

- Small-sized, large capacity, excellent voltage holding.
- For all ratings, uniform 5mm pitch of terminal spacing.
- Wider temperature range (−25 to +70°C) than battery.
- $\phi 21.5 \times 8.0$ mm size can encase up to 1.5F.
- Ideal for backing up of CMOS's, IC's of camera, microcomputers, RAM's, RTC's and the like used in audio, general electronic device, and others.

Marking color : White print on an indigo sleeve

5.5V Low Resistance

GREEN CAP

70°C

Low ESR

- Internal resistance was reduced to about 1/3 ($\phi 13.5$), compared with DB series.
- It excels in rapid charge.

Marking color : White print on an indigo sleeve

Part number is refer to following table.

Note

Do not apply external force to products or terminals as stress such as twisting, bending, pushing, or falling of such products or terminals may remove the terminals, resulting in an open/short circuit or liquid leakage.
Avoid applying excessive heat to capacitors during heating of an adhesive curing oven. For details, refer to the precautions in use of DYNACAP.

|-------------|---|-------------------------------|---------------|--------------------------|-------------------|---|
| DXN | — | 5R5 | | 224 | | U |
| Series code | | Max. operating voltage symbol | Terminal code | Rated Capacitance symbol | Additional symbol | |

Part number is refer to following table.

Note

Do not apply external force to products or terminals as stress such as twisting, bending, pushing, or falling of such products or terminals may remove the terminals, resulting in an open/short circuit or liquid leakage.
Avoid applying excessive heat to capacitors during heating of an adhesive curing oven. For details, refer to the precautions in use of DYNACAP.

Standard Ratings

| Max. operating voltage (V) | Rated capacitance (F) | ELNA Parts No. | $\phi D \times L$ (mm) |
|----------------------------|-----------------------|----------------|------------------------|
| 5.5 | 0.047 | DXN-5R5V473U | 11.5×13.0 |
| | | DXN-5R5H473U | 11.5× 5.0 |

| 5.5 | 1.5 | DXN-5R5V155U | 19.0×20.5 |

*It can discharge with 1.5 times as much current (mA) as rated capacitance.

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

5.5V Miniaturized High Temperature Capacitors

GREEN CAP

85°C

- High temperature type of Series DX.
- 5mm tall. Max. thin profile (H-shaped).
- Miniaturized but can encase up to 0.33F in $\phi 11.5$ case, and 1.0F in $\phi 19.0$ case.
- Ideal for backing up of CMOS's, IC's of camera, microcomputers, RAM's, RTC's and the like used in audio, general electronic device, and others.

Marking color : White print on a black sleeve

3.6V Miniaturized Low ESR High Temperature Capacitors

GREEN CAP

85°C

- Long life of 3.6V 2000 hours, low ESR in DX series and this size.
- 5mm tall. Max. thin profile (H-shaped).
- Wider temperature range (-25 to +85°C) than battery.
- Miniaturized but can encase up to 0.47F in $\phi 11.5$ case, and 1.0F in $\phi 19.0$ case.
- It excels in rapid charge.
- Ideal for backing up of CMOS's, IC's of camera, microcomputers, RAM's, RTC's and the like used in audio, general electronic device, and others.

| 2.5 | 300 | 5.0 | DZH-2R5D307S57T | 35 × 50 | 0.08 | 15 |

We tailor packaged product in series and parallel arrangements according to voltage and capacitance as required.

High Power Type Capacitors

GREEN CAP 70°C Low ESR 2.5V / 2.7V

- Low internal resistance allows boosting charge and heavy-current discharge. (ampere level)
- Environmentally Friendly : without environmentally hazardous substances such as Cd or Pb.
- Unlike batteries, excellent charge and discharge characteristics with no chemical reaction.

Marking color : White print on a blue sleeve

Specifications

| Item | Performance | |
|---|---|---|
| Category temperature range (°C) | -25 to +70 | |
| Tolerance at rated capacitance (%) | -20 to +80 | |
| Internal resistance | Refer to the following page | |
| Characteristics at high and low temperature | Percentage of capacitance change | Within ±30% of the value at 20°C |
| | Internal resistance | Five times or less of the value at 20°C |
| Endurance (70°C) | Test time | 1000 hours |
| | Percentage of capacitance change | Within ±30% of the initial measured value |
| | Internal resistance | Four times or less of the initial specified value |
| Shelf life (70°C) | Test time : 1000 hours ; Same as endurance. | |
| Applicable standards | Conforms to JIS C5160 - 1 (IEC 6239 - 1) | |

1 Description of Electric Double Layer Capacitor

1-1 Basic Concepts

Generally capacitors are constructed with a dielectric placed between opposed electrodes, functioning as capacitors by accumulating charges in the dielectric material. Aluminum electrolytic and tantalum electrolytic capacitors, for example, use an aluminum oxide film and a tantalum oxide film as the dielectric, respectively.

On the other hand, Electric Double Layer Capacitors have no visible dielectric in a general sense but utilize the state referred to as the electric double layer, which is developed naturally on the interface between substances, as the function of dielectric.

1-2 Operating Principle

The Electric Double Layer represents the state in which positive and negative charges exist at a very short distance on the boundary where contact occurs between two different substances (e.g. solid and liquid). By externally applying a voltage below a certain voltage to the boundary, higher charges can be accumulated. Accordingly, charge and discharge of electric double layer capacitors utilize adsorption and desorption of ions to the ionic adsorption layer (Electric Double Layer) formed on the electrode surface of the activated carbon used for electrodes.

Applying DC voltage externally across the electrodes of the Electric Double Layer allows almost no passage of current up to a certain voltage, exhibiting a condition like insulation.

However, the application of voltages exceeding the certain voltage causes electrolysis to occur in the electrolyte, resulting in abrupt passage of current.

This voltage determines the resistance of voltage of an Electric Double Layer Capacitor. We use an organic electrolyte and its standard electrolysis occurs at the voltage of about 2.5 to 3V.

1-3 Advantages and Disadvantages of Electric Double Layer Capacitor

[Advantages]

- (1) Small size and capacitance in farads (F) available by utilizing the activated carbon electrode with a large surface area
- (2) No special charging circuit and constrains during discharge are required.
- (3) No effect on the life through overcharging and overdischarging
- (4) Environmentally clean energy

[Disadvantage]

- (1) The life is limited due to the use of electrolyte.
- (2) Series connection is required when used with a low resistance of voltage at a high voltage.
- (3) Cannot be used in AC circuits due to high internal resistance unlike aluminum electrolytic capacitors.

Fig.1 Schematic of Principle of Electric Double Layer Capacitor

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

1-4 Construction of DYNACAP

The series which consists of coin cells is similar to that of coin-type batteries as shown in Fig.2. DYNACAP contains a single cell or two to three cells stacked in series.

Since these series have a large electrode-to-electrode distance and a small electrode area exhibiting a large internal resistance, they are suitable for the memory backup application that involves microcurrent discharge.

The cylindrical cell construction as seen in the DZ and DZN series has the construction similar to that of aluminum electrolytic capacitors as shown in Fig.3.

Fig.2 Example of Basic Construction of Coin Cell

Fig.3 Example of Basic Construction of Cylindrical Cell

These series have a small electrode-to-electrode distance, allowing a large electrode area because of the winding structure. This decreases the internal resistance, which is primary suitable for applications requiring high-power such as motor drive and LED lighting that need high currents.

2 Description of Life Expectancy

Generally, the life of Electric Double Layer Capacitors is largely affected by the ambient temperature.

The expected life is approximated by the equation as shown below:

$$L = L_0 \times 2^{\left(\frac{T_0 - T}{10} \right)}$$

Where,

- L : Expected lifetime at temperature T
- L₀ : Lifetime at temperature T₀
- T : Expected working temperature
- T₀ : Upper category temperature

Note that the above equation does not cover charge and discharge. In the case of charge and discharge, heat generation occurs inside a capacitor; the temperature rise by this heat generation must also be considered.

The expected life time is a maximum as a guide in terms of deterioration of the sealant.

Coin cell type : about ten years

Cylindrical type : about fifteen years

NOTE : Design, Specifications are subject to change without notice. It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

3 Calculation Method of Discharge Time

3-1 Approximating the Discharge Time of Basic Constant Current Discharge

The discharge time at the constant current of a capacitor can be calculated by the following equation.

$$t = (C \times \Delta V) / I$$

Where,

- t : Discharge time (sec.)
- C : Capacitor capacitance (F)
- ΔV : Working voltage range (V)
- I : Discharge current (A)

As an example, we calculate the discharge time when a capacitor of the DB series 5.5V 1F is charged with 5V and discharged to 3V at a constant current of 1 mA. Since the working voltage range ΔV is 2V from 5 – 3V, $t = (1F \times 2V) / 0.001A$ from the above equation, and the discharge time can be calculated as 2,000 seconds (about 33 minutes). Note that the actual discharge time may be different because this equation does not cover the effect of the self-discharge and the IR drop by internal resistance described below.

3-2 Effect of Self-discharge at Microcurrents

When backup is made by discharge with a micro-current below some μA especially for the memory backup application and the like, the discharge time must be determined while taking into account the self-discharge as shown in Fig.4.

The value closer to the actual discharge curve is obtained by adding the voltage drop through the self-discharge determined from the voltage retention characteristic test to the discharge curve given by calculation.

Note that the value of self-discharge varies by the charge time, charging current and an ambient temperature.

Fig.4 Example of Discharge Curve involving Self-Discharge

3-3 Effect of IR Drop at Large Currents

When a large Current discharge and a capacitor with a high internal resistance are used, the effect of IR drop by the product of the internal resistance and the current must be considered as shown in Fig.5. Moreover, the maximum discharge current of the product (coin cell series) of a memory backup use recommends below 1 mA/F (at 20 °C).

When a large current is required in a very short time, or a large instantaneous current flows at the start of discharge, the voltage drop indicated with ΔV_1 counts. However, when the discharge continues as it is, the discharge curve indicates in a manner showing a slow diffusion and then keeps a constant straight line.

We also make calculation including ΔV_2 of the intersection extending from the initial discharge and the discharge straight line section including the diffusion curve when indicating the DC internal resistance.

Fig.5 Example of Discharge Curve involving IR Drop

Due to IR drop, the shape of the discharge curve varies by the internal resistance and ambient temperature for each series.

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

4 Series-parallel connection packaged products.

Electric Double Layer Capacitors have a low operating voltage per cell.

To deal with this, ELNA is ready to offer series packaging for high operating voltages to meet to various needs.

Please consult with us on optimization and design.

Packaged item

Example of packaged item

In case of a low voltage (up to about 24 V) for the DZ and DZN series with relatively low capacitance, we are preparing simple packaged products.

No full-scale voltage equalization circuit has been equipped yet, but comparatively low cost and flexible layout can be realized.

5 Moisture-proof provision

If a electric double layer capacitor is used in a heat-and-high-humidity environment, the characteristic will deteriorate.

Please consult when using in a heat and high humidly environment.

6 Regarding Recovery Voltage

After charging and then discharging the electric double layer capacitor, and further causing short-circuit to the terminals and leave them alone, the voltage between the two terminals will rise again after some interval. This voltage is called recovery voltage.

This voltage may cause the bad influence to the low-voltage driven components (CPU, memory, etc.) or damage of the capacitor with soldering.

Discharging before use is safer. It is important especially when using it by series connection.

Moreover, it is possible making the terminals in short-circuit condition at the production stage. Please consult us for adequate procedures.

7 Applications

Features & Benefits of Electric Double Layer Capacitor

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

7 Electric Characteristics Data

7-1 Coin type for memory back-up

DYNACAP Series DXJ
5.5V 0.33F/DXJ-5R5H334U $\phi 11.5 \times 5L$ (mm)

DYNACAP Series DHL
5.5V 0.22F/DHL-5R5D224T $\phi 13.5 \times 9.5L$ (mm)

■ Endurance (85°C 5.5V.DC)

■ Discharge characteristics

■ Characteristics at high and low temperature

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

DYNACAP Series DSK
3.3V 0.2F/DSK-3R3H204T614-H2L $\phi 6.8 \times 1.4$ L (mm)

■ Endurance (60°C 3.3V.DC)

■ Discharge characteristics

■ Characteristics at high and low temperature

DYNACAP Series DVL
5.5V 0.22F/DVL-5R5D224T-R5 $\phi 12.5 \times 10.5$ L (mm)

■ Endurance (85°C 5.5V.DC)

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

7-2 Cylindrical type for power

DYNACAP Series DZN
2.7V 2.7F/DZN-2R7D275G5T $\phi 8 \times 20L$ (mm)

DYNACAP Series DDU
2.7V 25F / DDU-2R7D256J6T $\phi 16 \times 25L$ (mm)

■ Endurance (70°C 2.7V.DC)

■ Endurance (70°C 2.7V.DC)

■ Discharge characteristics

■ Characteristics at high and low temperature DDU-2R7D256J6T

NOTE : Design, Specifications are subject to change without notice.
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.
