| CUSTOMER'S PRODUCT NAME | TDK PRODUCT NAME<br>MULTILAYER CERAMIC CHIP CAPACITORS<br>Bulk and Tape packaging 【RoHS compliant】<br>CGA3EA ESD Protection Series |
|-------------------------|--|

Please return this specification to TDK representatives with your signature.  
 If orders are placed without returned specification, please allow us to judge that specification is accepted by your side.

## RECEIPT CONFIRMATION

DATE: \_\_\_\_\_ YEAR \_\_\_\_\_ MONTH \_\_\_\_\_ DAY \_\_\_\_\_

Test conditions in this specification based on AEC-Q200 for automotive application.

|------------|----------|----------|----------|------------|-----------|------------|----------|------------|----------|----------|
| <b>CGA</b> | <b>3</b> | <b>E</b> | <b>A</b> | <b>NP0</b> | <b>2A</b> | <b>103</b> | <b>J</b> | <b>080</b> | <b>A</b> | <b>C</b> |
| (1)        | (2)      | (3)      | (4)      | (5)        | (6)       | (7)        | (8)      | (9)        | (10)     | (11)     |

(1) Series

(2) Dimensions L x W (mm)

| Dimensions code | EIA    | Length | Width | Terminal width |
|-----------------|--------|--------|-------|----------------|
| 3               | CC0603 | 1.60   | 0.80  | 0.20           |

(3) Thickness code

| Code | Thickness |
|------|-----------|
| E    | 0.80mm    |

(4) Function identification code

| Symbol | Condition      |
|--------|----------------|
| A      | ESD protection |

(5) Temperature characteristics

| Temperature characteristics | Capacitance change | Temperature range |
|-----------------------------|--------------------|-------------------|
| C0G                         | 0±30 ppm/°C        | -55 to +125°C     |
| NP0                         | 0±30 ppm/°C        | -55 to +150°C     |

(6) Rated voltage (DC)

| Code | Voltage (DC) |
|------|--------------|
| 2A   | 100V         |

(7) Nominal capacitance (pF)

The capacitance is expressed in three digit codes and in units of pico Farads (pF). The first and second digits identify the first and second significant figures of the capacitance. The third digit identifies the multiplier. R designates a decimal point.

(Example) 0R5 = 0.5pF  
 101 = 100pF  
 225 = 2,200,000pF = 2.2µF

(8) Capacitance tolerance

| Code | Tolerance |
|------|-----------|
| J    | ±5%       |

(9) Thickness

| Code | Thickness |
|------|-----------|
| 080  | 0.80mm    |

(10) Packaging style

| Code | Style                 |
|------|-----------------------|
| A    | 178mm reel, 4mm pitch |

(11) Special reserved code

| Code | Tolerance         |
|------|-------------------|
| A,C  | TDK internal code |

**SCOPE**

This delivery specification shall be applied to Multilayer ceramic chip capacitors to be delivered to \_\_\_\_\_.

**PRODUCTION PLACES**

Production places defined in this specification shall be TDK Corporation, TDK(Suzhou)Co.,Ltd and TDK Components U.S.A.,Inc.

**PRODUCT NAME**

The name of the product to be defined in this specifications shall be CGA3EA0002A□□□ ×.

**REFERENCE STANDARD**

|                       |  |
|-----------------------|--|
| JIS C 5101-1 : 2010   | Fixed capacitors for use in electronic equipment-Part 1: Generic specification   |
| C 5101-21 : 2014      | Fixed capacitors for use in electronic equipment-Part21 : Sectional specification : Fixed surface mount multilayer capacitors of ceramic dielectric,Class1 |
| C 0806-3 : 2014       | Packaging of components for automatic handling - Part 3: Packaging of surface mount components on continuous tapes   |
| JEITA RCR-2335 C 2014 | Safety application guide for fixed ceramic capacitors for use in electronic equipment  |

**CONTENTS**

1. CODE CONSTRUCTION
2. OPERATING TEMPERATURE RANGE
3. STORING CONDITION AND TERM
4. INDUSTRIAL WASTE DISPOSAL
5. PERFORMANCE
6. INSIDE STRUCTURE AND MATERIAL
7. PACKAGING
8. SETTING UP FOR ESD TEST
9. CAUTION
10. TAPE PACKAGING SPECIFICATION

**<EXPLANATORY NOTE>**

When the mistrust in the spec arises, this specification is given priority. And it will be confirmed by written spec change after conference of both posts involved.

This specification warrants the quality of the ceramic chip capacitor. Capacitors should be evaluated or confirmed a state of mounted on your product.

If the use of the capacitors goes beyond the bounds of this specification, we can not afford to guarantee.

| Division                          | Date      | SPEC. No. |
|-----------------------------------|-----------|-----------|

# 1. CODE CONSTRUCTION

(Example)  $\frac{CGA}{(1)} \quad \frac{3}{(2)} \quad \frac{E}{(3)} \quad \frac{A}{(4)} \quad \frac{COG}{(5)} \quad \frac{2 A}{(6)} \quad \frac{103}{(7)} \quad \frac{J}{(8)} \quad \frac{T}{(9)} \quad \frac{OOOO}{(10)}$

(1) Series

| Symbol | Series  |
|--------|---|
| CGA    | Ceramic chip capacitor for automotive application |

(2) Case size

| Symbol | Case size      | Dimensions (Unit : mm) |           |           |           |           |
|--------|----------------|------------------------|-----------|-----------|-----------|-----------|
|        | TDK(EIA style) | L                      | W         | T         | B         | G         |
| 3      | CGA3(CC0603)   | 1.60±0.10              | 0.80±0.10 | 0.80±0.10 | 0.20 min. | 0.30 min. |

(3) Thickness

| Symbol | Dimension(mm) |
|--------|---------------|
| E      | 0.80          |

(4) Identification for ESD capacitor

\* Details are shown in Table 1 No.16 at 5.PERFORMANCE.

※ As for applied ESD level, please refer to detail page on TDK Web.

| Symbol | Identification |
|--------|----------------|
| A      | ESD capacitor  |

(5) Temperature Characteristics

\* Details are shown in Table 1 No.6 at 5.PERFORMANCE.

(6) Rated Voltage

| Symbol | Rated Voltage |
|--------|---------------|
| 2 A    | DC 100 V      |

(7) Rated Capacitance

Stated in three digits and in units of pico farads (pF). The first and Second digits identify the first and second significant figures of the capacitance, the third digit identifies the multiplier.

(Example)

| Symbol | Rated Capacitance |
|--------|-------------------|
| 103    | 10,000 pF         |

(8) Capacitance tolerance

| Symbol | Tolerance |
|--------|-----------|
| J      | ± 5 %     |

(9) Packaging

| Symbol | Packaging |
|--------|-----------|
| B      | Bulk      |
| T      | Taping    |

(10) TDK internal code

**2. OPERATING TEMPERATURE RANGE**

| T.C. | Min. operating Temperature | Max. operating Temperature | Reference Temperature |
|------|----------------------------|----------------------------|-----------------------|
| C0G  | -55°C                      | 125°C                      | 25°C                  |
| NP0  | -55°C                      | 150°C                      | 25°C                  |

**3. STORING CONDITION AND TERM**

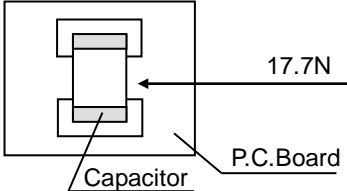

| Storing temperature | Storing humidity | Storing term                  |
|---------------------|------------------|-------------------------------|
| 5~40°C              | 20~70%RH         | Within 6 months upon receipt. |

**4. INDUSTRIAL WASTE DISPOSAL**

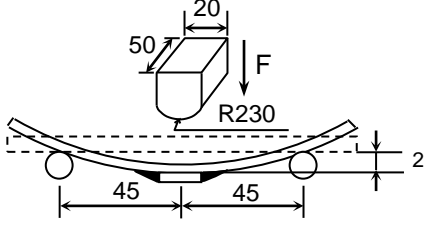

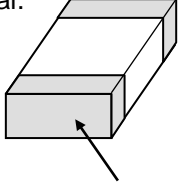

Dispose this product as industrial waste in accordance with the Industrial Waste Law.

5. PERFORMANCE

Table 1

| No.               | Item   | Performance  | Test or inspection method   |                                  |                     |                   |        |          |                   |  |  |
|-------------------|--|--|---|----------------------------------|---------------------|-------------------|--------|----------|-------------------|--|--|
| 1                 | External Appearance                          | No defects which may affect performance.   | Inspect with magnifying glass(3x)   |                                  |                     |                   |        |          |                   |  |  |
| 2                 | Insulation Resistance                        | 10,000MΩ min.  | Measuring voltage : Rated voltage<br>Voltage application time : 60s.  |                                  |                     |                   |        |          |                   |  |  |
| 3                 | Voltage Proof                                | Withstand test voltage without insulation breakdown or other damage.   | Apply voltage : 3 x rated voltage<br>Voltage application time : 1s.<br>Charge/discharge current : 50mA or lower   |                                  |                     |                   |        |          |                   |  |  |
| 4                 | Capacitance                                  | Within the specified tolerance.  | <table border="1"> <thead> <tr> <th>Rated Capacitance</th> <th>Measuring frequency</th> <th>Measuring voltage</th> </tr> </thead> <tbody> <tr> <td>1000pF</td> <td>1MHz±10%</td> <td rowspan="2">0.5 ~ 5V rms.</td> </tr> <tr> <td>Over 1000pF</td> <td>1kHz±10%</td> </tr> </tbody> </table>                                   | Rated Capacitance                | Measuring frequency | Measuring voltage | 1000pF | 1MHz±10% | 0.5 ~ 5V rms.     | Over 1000pF                                  | 1kHz±10%   |

Appendix1

P.C.Board for bending test

Appendix2

P.C. Board for reliability test

Appendix3

P.C. Board for ESD test

1. Material : Glass Epoxy  
(As per JIS C6484 GE4)

2. Thickness : 1.6mm

- Copper(Thickness:0.035mm)
- Solder resist

Appendix 1, 2 (Unit : mm)

| Case size      | a   | b   | c   |
|----------------|-----|-----|-----|
| TDK(EIA style) |     |     |     |
| CGA3(CC0603)   | 1.0 | 3.0 | 1.2 |

Appendix 3 (ESD TEST) (Unit : mm)

| Case size      | a   | b   | c    |
|----------------|-----|-----|------|
| TDK(EIA style) |     |     |      |
| CGA3(CC0603)   | 1.0 | 3.0 | 0.75 |

## 6. INSIDE STRUCTURE AND MATERIAL

| No. | NAME        | MATERIAL           |
|-----|-------------|--------------------|
| 1   | Dielectric  | CaZrO <sub>3</sub> |
| 2   | Electrode   | Nickel (Ni)        |
| 3   | Termination | Copper (Cu)        |
| 4   |             | Nickel (Ni)        |
| 5   |             | Tin (Sn)           |

## 7. PACKAGING

Packaging shall be done to protect the components from the damage during transportation and storing, and a label which has the following information shall be attached.

7.1 Each plastic bag for bulk packaging contains 1000pcs. And the minimum quantity for Bulk packaging is 1000pcs.

7.2 Tape packaging is as per 11. TAPE PACKAGING SPECIFICATION.

- 1) Inspection No.
- 2) TDK P/N
- 3) Customer's P/N
- 4) Quantity

\*Composition of Inspection No.

Example     F 9 A - 23 - 001  
                   (a) (b) (c)     (d)     (e)

- (a) Line code
- (b) Last digit of the year
- (c) Month and A for January and B for February and so on. (Skip I)
- (d) Inspection Date of the month.
- (e) Serial No. of the day

\*Composition of new Inspection No.

(Will be implemented on and after May 1, 2019)

Example     

|   |   |   |   |   |   |   |   |   |   |
|---|---|---|---|---|---|---|---|---|---|
| I | F | 9 | E | 2 | 3 | A | 0 | 0 | 1 |
|---|---|---|---|---|---|---|---|---|---|

  
                   (a) (b) (c) (d)    (e)    (f)    (g)

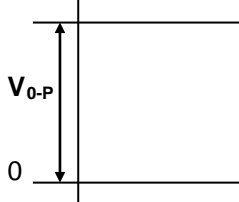

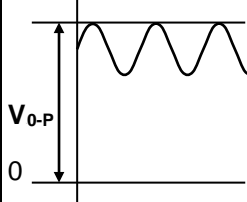

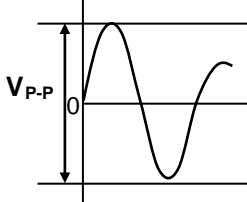

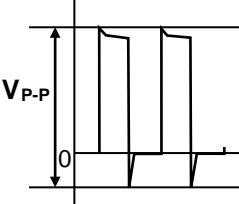

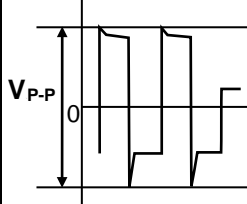

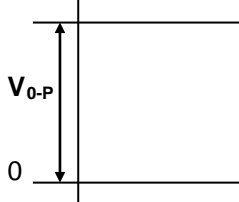

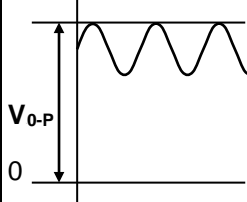

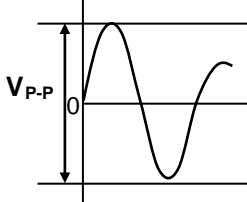

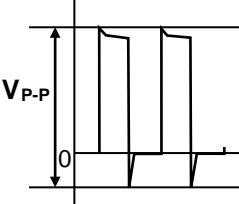

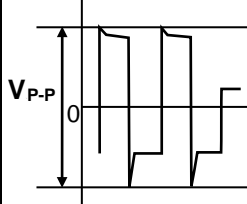

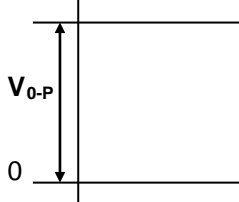

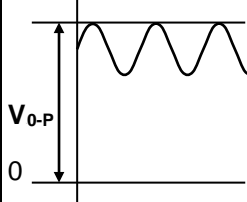

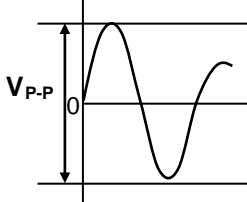

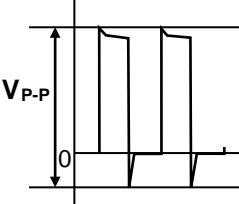

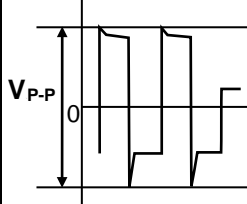

- (a) Prefix
- (b) Line code
- (c) Last digit of the year
- (d) Month and A for January and B for February and so on. (Skip I)
- (e) Inspection Date of the month.
- (f) Serial No. of the day(00 ~ ZZ)
- (g) Suffix(00 ~ ZZ)

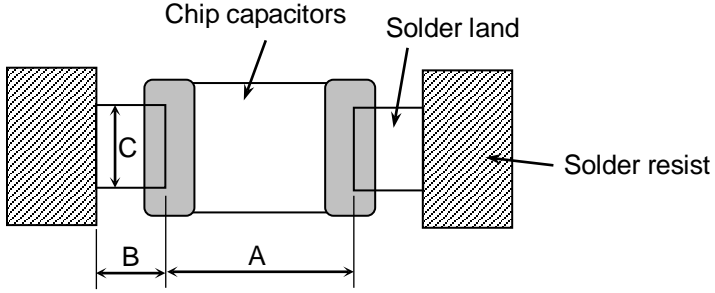

\* It is planned to shift to the new inspection No. on and after May 2019, but the implementation timing may be different depending on shipment bases. Until the shift is completed, either current or new composition of inspection No. will be applied.

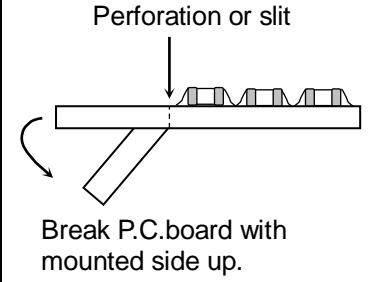

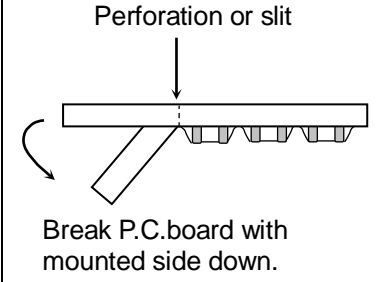

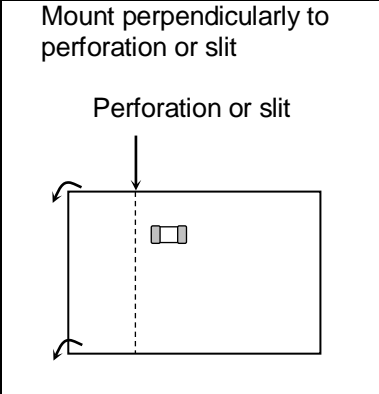

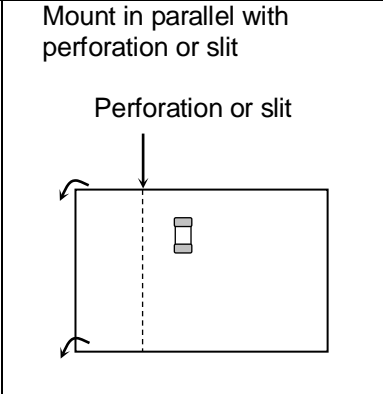

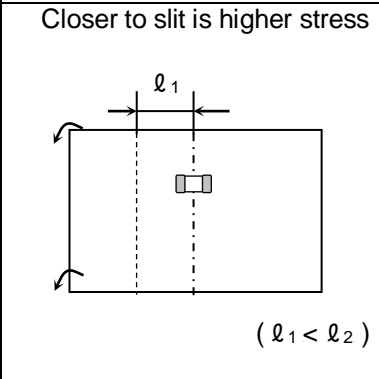

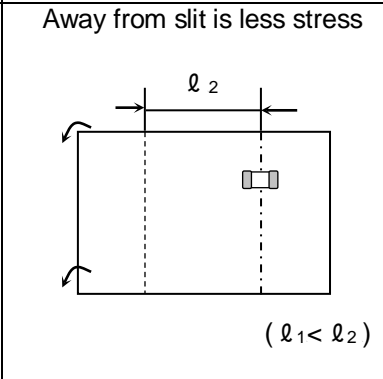

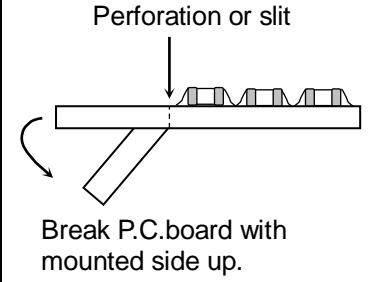

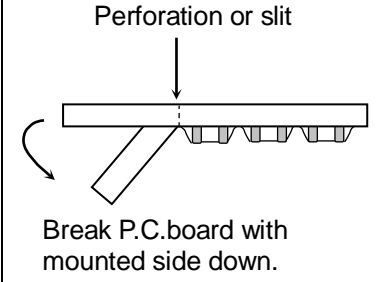

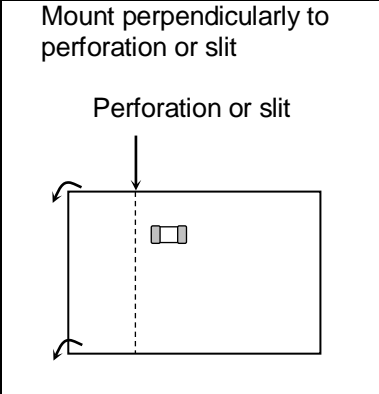

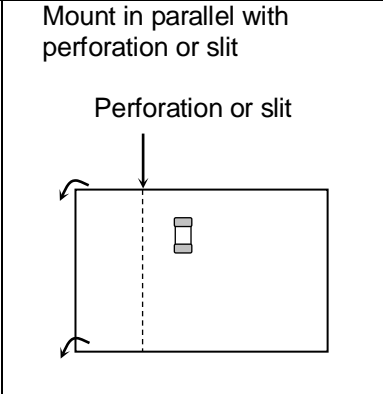

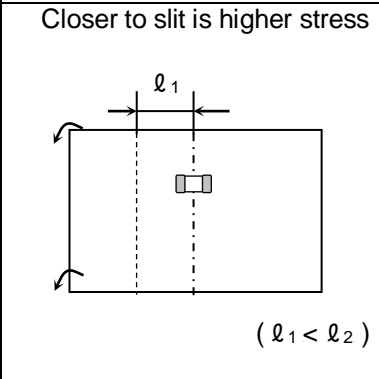

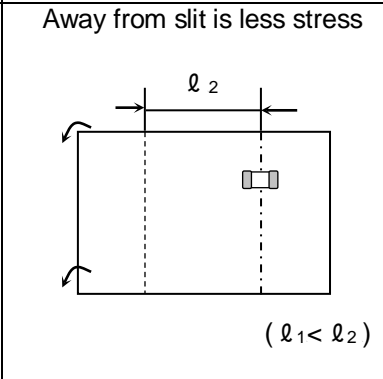

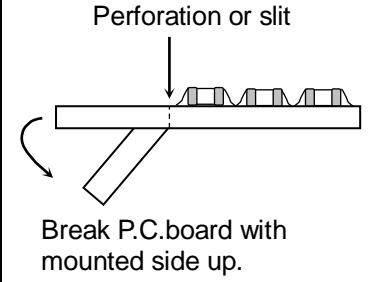

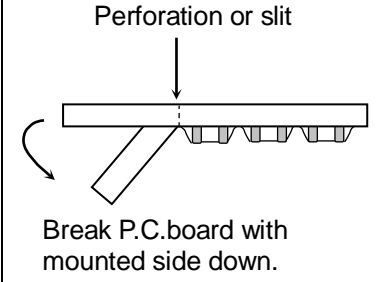

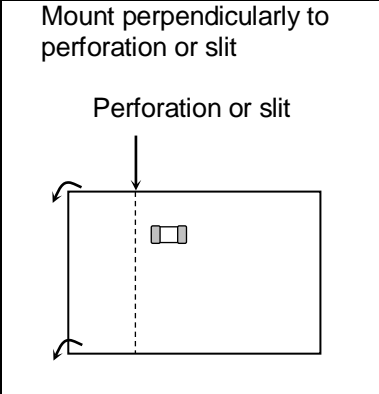

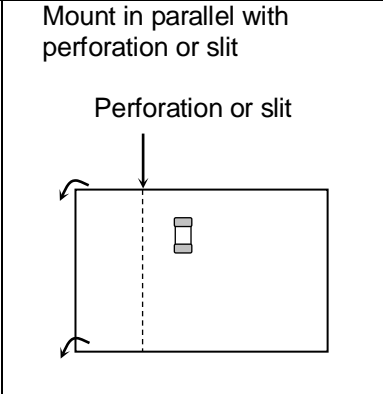

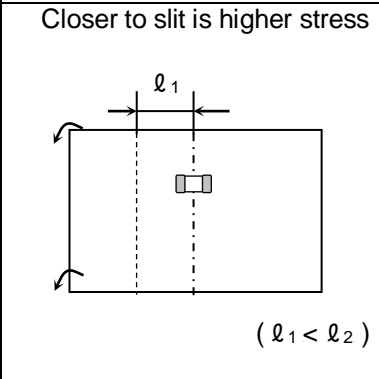

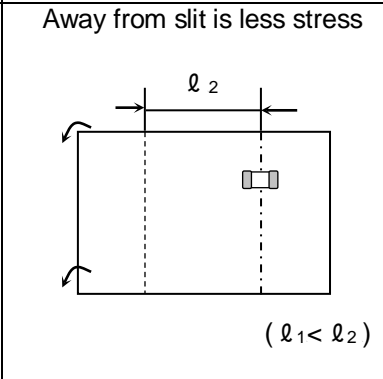

## 8. SETTING UP FOR ESD TEST

### 9. CAUTION

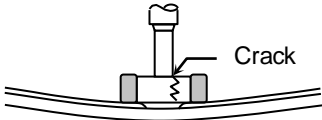

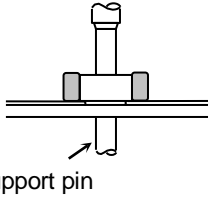

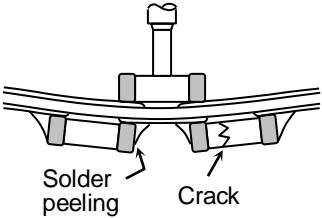

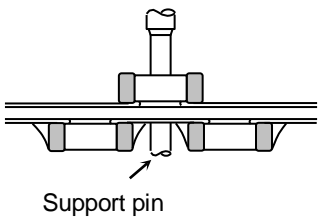

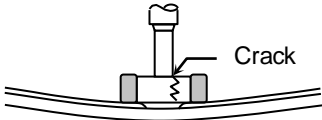

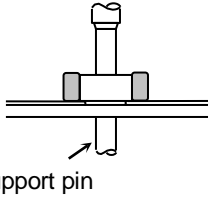

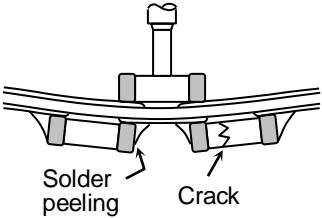

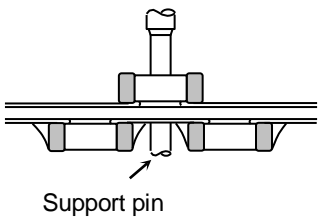

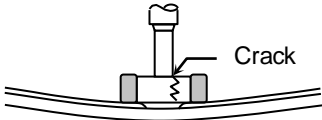

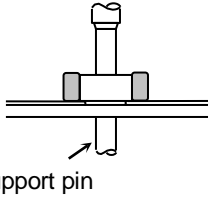

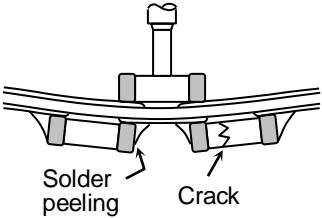

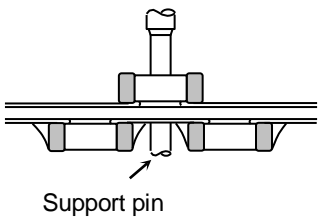

| No.                                    | Process   | Condition  |   |                |                   |                |  |   |  |   |         |                       |                       |  |  |   |  |  |
|--|---|--|---|----------------|-------------------|----------------|--|---|--|---|---------|-----------------------|-----------------------|--|--|---|--|--|
| 1                                      | Operating Condition<br>(Storage, Use, Transportation)                               | <p>1-1. Storage, Use</p> <ol style="list-style-type: none"> <li>1) The capacitors must be stored in an ambient temperature of 5 to 40°C with a relative humidity of 20 to 70%RH. The products should be used within 6 months upon receipt.</li> <li>2) The capacitors must be operated and stored in an environment free of dew condensation and these gases such as Hydrogen Sulphide, Hydrogen Sulphate, Chlorine, Ammonia and sulfur.</li> <li>3) Avoid storing in sun light and falling of dew.</li> <li>4) Do not use capacitors under high humidity and high and low atmospheric pressure which may affect capacitors reliability.</li> <li>5) Capacitors should be tested for the solderability when they are stored for long time.</li> </ol> <p>1-2. Handling in transportation<br/>In case of the transportation of the capacitors, the performance of the capacitors may be deteriorated depending on the transportation condition.<br/>(Refer to JEITA RCR-2335C 9.2 Handling in transportation)</p>   |   |                |                   |                |  |   |  |   |         |                       |                       |  |  |   |  |  |
| 2                                      | Circuit design<br>⚠ Caution   | <p>2-1. Operating temperature<br/>Operating temperature should be followed strictly within this specification, especially be careful with maximum temperature.</p> <ol style="list-style-type: none"> <li>1) Do not use capacitors above the maximum allowable operating temperature.</li> <li>2) Surface temperature including self heating should be below maximum operating temperature.<br/>(Due to dielectric loss, capacitors will heat itself when AC is applied. Especially at high frequencies around its SRF, the heat might be so extreme that it may damage itself or the product mounted on. Please design the circuit so that the maximum temperature of the capacitors including the self heating to be below the maximum allowable operating temperature. Temperature rise at capacitor surface shall be below 20°C)</li> <li>3) The electrical characteristics of the capacitors will vary depending on the temperature. The capacitors should be selected and designed in taking the temperature into consideration.</li> </ol> <p>2-2. Operating voltage</p> <ol style="list-style-type: none"> <li>1) Operating voltage across the terminals should be below the rated voltage.<br/>When AC and DC are super imposed, <math>V_{0-P}</math> must be below the rated voltage.<br/>AC or pulse with overshooting, <math>V_{P-P}</math> must be below the rated voltage.</li> </ol> <p>When the voltage is started to apply to the circuit or it is stopped applying, the irregular voltage may be generated for a transit period because of resonance or switching. Be sure to use the capacitors within rated voltage containing these Irregular voltage.</p> <table border="1" data-bbox="470 1523 1444 2083"> <thead> <tr> <th data-bbox="470 1523 662 1568">Voltage</th> <th data-bbox="662 1523 917 1568">(1) DC voltage</th> <th data-bbox="917 1523 1181 1568">(2) DC+AC voltage</th> <th data-bbox="1181 1523 1444 1568">(3) AC voltage</th> </tr> </thead> <tbody> <tr> <td data-bbox="470 1568 662 1792">Positional Measurement (Rated voltage)</td> <td data-bbox="662 1568 917 1792">  </td> <td data-bbox="917 1568 1181 1792">  </td> <td data-bbox="1181 1568 1444 1792">  </td> </tr> <tr> <th data-bbox="470 1814 662 1859">Voltage</th> <th data-bbox="662 1814 917 1859">(4) Pulse voltage (A)</th> <th data-bbox="917 1814 1181 1859">(5) Pulse voltage (B)</th> <th></th> </tr> <tr> <td data-bbox="470 1859 662 2083">Positional Measurement (Rated voltage)</td> <td data-bbox="662 1859 917 2083">  </td> <td data-bbox="917 1859 1181 2083">  </td> <td></td> </tr> </tbody> </table> | Voltage   | (1) DC voltage | (2) DC+AC voltage | (3) AC voltage | Positional Measurement (Rated voltage) |  |  |  | Voltage | (4) Pulse voltage (A) | (5) Pulse voltage (B) |  | Positional Measurement (Rated voltage) |  |  |  |

| 5                    | Soldering   | <p>5-7.Soldering rework using spot heater<br/>Heat stress during rework may possibly be reduced by using a spot heater (also called a “blower”) rather than a soldering iron.<br/>It is applied only to adding solder in the case of insufficient solder amount.</p> <p>1) Reworking using a spot heater may suppress the occurrence of cracks in the capacitor compared to using a soldering iron. A spot heater can heat up a capacitor uniformly with a small heat gradient which leads to lower thermal stress caused by quick heating and cooling or localized heating.<br/>Moreover, where ultra-small capacitors are mounted close together on a printed circuit board, reworking with a spot heater can eliminate the risk of direct contact between the tip of a soldering iron and a capacitor.</p> <p>2) Rework condition<br/>If the blower nozzle of a spot heater is too close to a capacitor, a crack in the capacitor may occur due to heat stress. Below are recommendations for avoiding such an occurrence.<br/>Keep more than 5mm between a capacitor and a spot heater nozzle.<br/>The blower temperature of the spot heater shall be lower than 400°C.<br/>The airflow shall be set as weak as possible.<br/>The diameter of the nozzle is recommended to be 2mm(one-outlet type).The size is standard and common.<br/>Duration of blowing hot air is recommended to be 10s or less, considering surface area of the capacitor and melting temperature of solder.<br/>The angle between the nozzle and the capacitor is recommended to be 45degrees in order to work easily and to avoid partial area heating.<br/>As is the case when using a soldering iron, preheating reduces thermal stress on capacitors and improves operating efficiency.</p> <ul style="list-style-type: none"> <li>Recommended rework condition (Consult the component manufactures for details.)</li> </ul> <table border="1" data-bbox="507 1137 1449 1464"> <tbody> <tr> <td>Distance from nozzle</td> <td>5mm and over</td> </tr> <tr> <td>Nozzle angle</td> <td>45degrees</td> </tr> <tr> <td>Nozzle temp.</td> <td>400°C and less</td> </tr> <tr> <td>Airflow</td> <td>Set as weak as possible<br/>(The airflow shall be the minimum value necessary for solder to melt in the conditions mentioned above.)</td> </tr> <tr> <td>Nozzle diameter</td> <td>φ2mm (one-outlet type)</td> </tr> <tr> <td>Blowing duration</td> <td>10s and less</td> </tr> </tbody> </table> <ul style="list-style-type: none"> <li>Example of recommended spot heater use</li> </ul>  <p>3) Amount of solder should be suitable to form a proper fillet shape.<br/>Excess solder causes mechanical and thermal stress on a capacitor and results in cracks. Insufficient solder causes weak adherence of the capacitor to the substrate and may result in detachment of a capacitor and deteriorate reliability of the printed wiring board.<br/>See the example of appropriate solder fillet shape for 5-5.Amount of solder.</p> | Distance from nozzle | 5mm and over | Nozzle angle | 45degrees | Nozzle temp. | 400°C and less | Airflow | Set as weak as possible<br>(The airflow shall be the minimum value necessary for solder to melt in the conditions mentioned above.) | Nozzle diameter | φ2mm (one-outlet type) | Blowing duration | 10s and less |

| Board bending |  <p>Termination peeling<br/>Check pin</p> |  <p>Support pin<br/>Check pin</p>  |      |                 |             |               |   |  |
| 9             | Handling of loose chip capacitors   | <p>1) If dropped the chip capacitors may crack. Once dropped do not use it. Especially, the large case sized chip capacitors are tendency to have cracks easily, so please handle with care.</p>  <p>Floor<br/>Crack</p> <p>2) Piling the P.C.board after mounting for storage or handling, the corner of the P.C. board may hit the chip capacitors of another board to cause crack.</p>  <p>P.C.board<br/>Crack</p>  |      |                 |             |               |   |  |
| 10            | Capacitance aging   | The capacitors have aging in the capacitance. They may not be used in precision time constant circuit. In case of the time constant circuit, the evaluation should be done well.  |      |                 |             |               |   |  |
| 11            | Estimated life and estimated failure rate of capacitors   | As per the estimated life and the estimated failure rate depend on the temperature and the voltage. This can be calculated by the equation described in JEITA RCR-2335C Annex F(Informative) Calculation of the estimated lifetime and the estimated failure rate (Voltage acceleration coefficient : 3 multiplication rule, Temperature acceleration coefficient : 10°C rule)<br>The failure rate can be decreased by reducing the temperature and the voltage but they will not be guaranteed.  |      |                 |             |               |   |  |

| No. | Process  | Condition   |
|-----|--|---|
| 12  | Caution during operation of equipment  | <p>1) A capacitor shall not be touched directly with bare hands during operation in order to avoid electric shock.<br/>Electric energy held by the capacitor may be discharged through the human body when touched with a bare hand.<br/>Even when the equipment is off, a capacitor may stay charged. The capacitor should be handled after being completely discharged using a resistor.</p> <p>2) The terminals of a capacitor shall not be short-circuited by any accidental contact with a conductive object. A capacitor shall not be exposed to a conductive liquid such as an acid or alkali solution. A conductive object or liquid, such as acid and alkali, between the terminals may lead to the breakdown of a capacitor due to short circuit</p> <p>3) Confirm that the environment to which the equipment will be exposed during transportation and operation meets the specified conditions. Do not to use the equipment in the following environments.</p> <p>(1) Environment where a capacitor is splattered with water or oil<br/> (2) Environment where a capacitor is exposed to direct sunlight<br/> (3) Environment where a capacitor is exposed to Ozone, ultraviolet rays or radiation<br/> (4) Environment where a capacitor exposed to corrosive gas(e.g. hydrogen sulfide, sulfur dioxide, chlorine. ammonia gas etc.)<br/> (5) Environment where a capacitor exposed to vibration or mechanical shock exceeding the specified limits.<br/> (6) Atmosphere change with causes condensation</p>  |
| 13  | Others<br> Caution | <p>The product listed in this specification is intended for use in automotive applications under-normal operation and usage conditions.</p> <p>The product is not designed or warranted to meet the requirements of application listed below, whose performance and/or quality requires a more stringent level of safety or reliability, or whose failure, malfunction or defect could cause serious damage to society, person or property. Please understand that we are not responsible for any damage or liability caused by use of the products in any of the applications below or for any other use exceeding the range or conditions set forth in this specification sheet. If you intend to use the products in the applications listed below or if you have special requirements exceeding the range or conditions set forth in this specification, please contact us.</p> <p>(1) Aerospace/Aviation equipment<br/> (2) Transportation equipment (electric trains, ships etc.)<br/> (3) Medical equipment (Excepting Pharmaceutical Affairs Law classification Class1, 2)<br/> (4) Power-generation control equipment<br/> (5) Atomic energy-related equipment<br/> (6) Seabed equipment<br/> (7) Transportation control equipment<br/> (8) Public information-processing equipment<br/> (9) Military equipment<br/> (10) Electric heating apparatus, burning equipment<br/> (11) Disaster prevention/crime prevention equipment<br/> (12) Safety equipment<br/> (13) Other applications that are not considered general-purpose applications</p> <p>When designing your equipment even for general-purpose applications, you are kindly requested to take into consideration securing protection circuit/device or providing backup circuits in your equipment.</p> <p>In addition, although the products listed in this specification is intended for use in automotive application as described above, it is not prohibited to use for general electronic equipment, whose performance and/or quality doesn't require a more stringent level of safety or reliability, or whose failure, malfunction or defect could not cause serious damage to society, person or property.<br/>Therefore, the description of this caution will be applied, when the products are used in general electronic equipment under a normal operation and usage conditions.</p> |

## 10. TAPE PACKAGING SPECIFICATION

### 1. CONSTRUCTION AND DIMENSION OF TAPING

#### 1-1. Dimensions of carrier tape

Dimensions of paper tape shall be according to Appendix 4.

#### 1-2. Bulk part and leader of taping

#### 1-3. Dimensions of reel

Dimensions of  $\phi 178$  reel shall be according to Appendix 5.

Dimensions of  $\phi 330$  reel shall be according to Appendix 6.

#### 1-4. Structure of taping

## 2. CHIP QUANTITY

Please refer to detail page on TDK web.

### 3. PERFORMANCE SPECIFICATIONS

#### 3-1. Fixing peeling strength (top tape)

$$0.05\text{N} < \text{Peeling strength} < 0.7\text{N}$$

3-2. Carrier tape shall be flexible enough to be wound around a minimum radius of 30mm with components in tape.

3-3. The missing of components shall be less than 0.1%

3-4. Components shall not stick to fixing tape.

3-5. When removing the cover tape, there shall not be difficulties by unfitting clearance gap, burrs and crushes of cavities. Also the sprocket holes shall not be covered by absorbing dust into the suction nozzle.
