CUSTOMER'S PRODUCT NAME

TDK'S PRODUCT NAME

Multilayer Ceramic Chip Capacitors
High Voltage Series
Bulk and Tape packaging 【RoHS compliant】
CGA6,CGA7,CGA8,CGA9 Type
C0G,X7R Characteristics

Please return this specification to TDK representatives with your signature.
If orders are placed without returned specification, please allow us to judge that specification is accepted by your side.

RECEIPT CONFIRMATION

DATE: YEAR MONTH DAY

Test conditions in this specification based on AEC-Q200 for automotive application.

APPROVED	Person in charge

APPROVED	CHECKED	Person in charge

Catalog Number Construction

CGA • 8 • M • 1 • X7R • 3A • 103 • K • 200 • K • A

Series Name

Dimensions L x W (mm)

Code	Length	Width	Terminal
6	3.20 ± 0.40	2.50 ± 0.30	0.20 min.
7	4.50 ± 0.40	2.00 ± 0.30	0.20 min.
8	4.50 ± 0.40	3.20 ± 0.40	0.20 min.
9	5.70 ± 0.40	5.00 ± 0.40	0.20 min.

Thickness T Code (mm)

Code	Thickness	Code	Thickness
F	0.85 mm	M	2.00 mm
G	1.10 mm	N	2.30 mm
K	1.30 mm	P	2.50 mm
L	1.60 mm	Q	2.80 mm

Voltage Condition for Life Test

Symbol	Condition
1	1 × R.V.

Temperature Characteristics

Temperature Characteristics	Temperature Coefficient or Capacitance Change	Temperature Range
C0G	0±30 ppm/°C	-55 to +125°C
X7R	±15%	-55 to +125°C

Rated Voltage (DC)

Code	Voltage (DC)
3A	1,000V
3D	2,000V
3F	3,000V

Nominal Capacitance (pF)

The capacitance is expressed in three digit codes and in units of pico Farads (pF). The first and second digits identify the first and second significant figures of the capacitance. The third digit identifies the multiplier.

Ex. 100=10pF; 101=100pF; 333=33,000pF

Capacitance Tolerance

Code	Tolerance
F	± 1pF
J	± 5%
K	± 10%
M	± 20%

Nominal Thickness

Code	Thickness	Code	Thickness	Code	Thickness
085	0.85 mm	160	1.60 mm	250	2.50 mm
110	1.10 mm	200	2.00 mm	280	2.80 mm
130	1.30 mm	230	2.30 mm		

Packaging Style

Code	Style
A	178 mm Reel, 4 mm Pitch
K	178 mm Reel, 8 mm Pitch

Special Reserved Code

Code	Description
A, C	TDK Internal Code

1. SCOPE

This specification is applicable to chip type multilayer ceramic capacitors with a priority over the other relevant specifications.

Production places defined in this specification shall be TDK Corporation Japan, TDK(Suzhou)Co.,Ltd and TDK Components U.S.A. Inc.

EXPLANATORY NOTE:

This specification warrants the quality of the ceramic chip capacitor. Capacitors should be evaluated or confirmed a state of mounted on your product.

If the use of capacitors goes beyond the bounds of this specification, we can not afford to guarantee.

2. CODE CONSTRUCTION

(Example)	CGA	6	M	1	C0G	3 A	102	J	T	OOOO
	<u>CGA</u>	<u>8</u>	<u>K</u>	<u>1</u>	<u>X7R</u>	<u>3 D</u>	<u>222</u>	<u>M</u>	<u>T</u>	<u>OOOO</u>
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)

(1) Series

Symbol	Series
CGA	For automotive application

(2) Type

Case size Symbol	Type (EIA style)	Dimensions (Unit : mm)			
		L	W	T	B
6	CGA6 (CC1210)	3.20±0.40	2.50±0.30	2.00±0.20	0.20 min.
				2.50±0.30	
7	CGA7 (CC1808)	4.50±0.40	2.00±0.20	0.85±0.15	0.20 min.
				1.10±0.20	
				1.30±0.20	
				1.60±0.20	
8	CGA8 (CC1812)	4.50±0.40	3.20±0.40	1.30±0.20	0.20 min.
				1.60±0.20	
				2.00±0.20	
9	CGA9 (CC2220)	5.70±0.40	5.00±0.40	2.50±0.30	0.20 min.
				2.80±0.30	

*As for each item, please refer to the table A in the end of the specification.

(3) Thickness

Thickness	Dimension(mm)	Thickness	Dimension(mm)
F	0.85	M	2.00
G	1.10	P	2.50
K	1.30	Q	2.80
L	1.60		

(4) Voltage condition in the life test

* Details are shown in table1 No.16 at 8.PERFORMANCE.

Sign	Condition
1	Rated Voltage

(5) Temperature Characteristics

* Details are shown in table 1 No.6 and No.7 at 8.PERFORMANCE.

(6) Rated Voltage

Symbol	Rated Voltage
3 A	DC 1kV
3 D	DC 2kV
3 F	DC 3kV

(7) Rated Capacitance

Stated in three digits and in units of pico farads (pF).
The first and second digits identify the first and second significant figures of the capacitance, the third digit identifies the multiplier.

(Example)

Symbol	Rated Capacitance
101	100 pF
222	2,200 pF

(8) Capacitance tolerance

Symbol	Tolerance	Capacitance
F	± 1 pF	10pF
J	± 5 %	Over 10pF
K	± 10 %	
M	± 20 %	

(9) Packaging

Symbol	Packaging
B	Bulk
T	Taping

(10) TDK internal code

3. RATED CAPACITANCE AND TOLERANCE

3.1 Standard combination of rated capacitance and tolerances

Class	Temperature Characteristics	Capacitance tolerance		Rated capacitance
1	C0G	10pF	F (± 1 pF)	10
		Over 10pF	K (± 10 %)	E – 12 series
2	X7R	K (± 10 %) M (± 20 %)		E – 3 series

3.2 Capacitance Step in E series

E series	Capacitance Step											
E- 3	1.0				2.2				4.7			
E-12	1.0	1.2	1.5	1.8	2.2	2.7	3.3	3.9	4.7	5.6	6.8	8.2

4. OPERATING TEMPERATURE RANGE

T.C.	Min. operating Temperature	Max. operating Temperature	Reference Temperature
C0G	-55°C	125°C	25°C
X7R	-55°C	125°C	25°C

5. STORING CONDITION AND TERM

5 to 40°C at 20 to 70%RH
6 months Max. upon receipt.

6. P.C. BOARD

This specification not applicable to Aluminum or some other substrate for such application, please state so and inquire separate specification.

7. INDUSTRIAL WASTE DISPOSAL

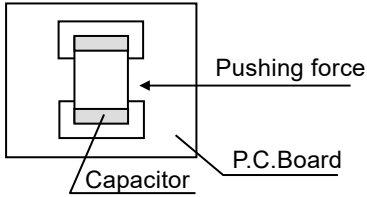

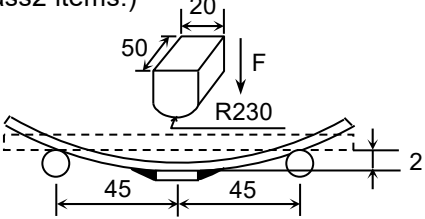

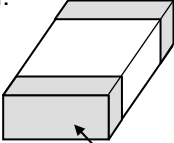

Dispose this product as industrial waste in accordance with the Industrial Waste Law.

8. PERFORMANCE

table 1

No.	Item	Performance	Test or inspection method												
1	External Appearance	No defects which may affect performance.	Inspect with magnifying glass (3×).												
2	Insulation Resistance	10,000MΩ min.	Apply 500V DC for 60s.												
3	Voltage Proof	Withstand test voltage without insulation breakdown or other damage.	1.2 times of rated voltage Above DC voltage shall be applied for 1s. Charge / discharge current shall not exceed 50mA.												
4	Capacitance	Within the specified tolerance.	<p>《Class 1》</p> <table border="1"> <thead> <tr> <th>Capacitance</th> <th>Measuring frequency</th> <th>Measuring voltage</th> </tr> </thead> <tbody> <tr> <td>1000pF and under</td> <td>1MHz±10%</td> <td rowspan="2">0.5~5 Vrms.</td> </tr> <tr> <td>Over 1000pF</td> <td>1kHz±10%</td> </tr> </tbody> </table> <p>《Class 2》</p> <table border="1"> <thead> <tr> <th>Measuring frequency</th> <th>Measuring voltage</th> </tr> </thead> <tbody> <tr> <td>1kHz±10%</td> <td>1.0±0.2Vrms</td> </tr> </tbody> </table>	Capacitance	Measuring frequency	Measuring voltage	1000pF and under	1MHz±10%	0.5~5 Vrms. Capacitance	Measuring frequency	Measuring voltage													
1000pF and under	1MHz±10%	0.5~5 Vrms.													
Over 1000pF	1kHz±10%														
Measuring frequency	Measuring voltage														
1kHz±10%	1.0±0.2Vrms														
5	Q (Class1) Dissipation Factor (Class2)	Please refer to the table A in the end of the specification.	See No.4 in this table for measuring condition.												
6	Temperature Characteristics of Capacitance (Class1)	<table border="1"> <thead> <tr> <th>T.C.</th> <th>Temperature Coefficient (ppm/°C)</th> </tr> </thead> <tbody> <tr> <td>COG</td> <td>0 ± 30</td> </tr> </tbody> </table> <p>Capacitance drift within ± 0.2% or ± 0.05pF, whichever larger.</p>	T.C.	Temperature Coefficient (ppm/°C)	COG	0 ± 30	<p>Temperature coefficient shall be calculated based on values at 25°C and 85°C temperature.</p> <p>Measuring temperature below 25°C shall be -10°C and -25°C.</p>								
T.C.	Temperature Coefficient (ppm/°C)														
COG	0 ± 30														
7	Temperature Characteristics of Capacitance (Class2)	<p>Capacitance Change (%)</p> <p>No voltage applied</p> <p>X7R : ± 15</p>	<p>Capacitance shall be measured by the steps shown in the following table after thermal equilibrium is obtained for each step.</p> <p>ΔC be calculated ref. STEP3 reading</p> <table border="1"> <thead> <tr> <th>Step</th> <th>Temperature(°C)</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>25 ± 2</td> </tr> <tr> <td>2</td> <td>-55 ± 2</td> </tr> <tr> <td>3</td> <td>25 ± 2</td> </tr> <tr> <td>4</td> <td>125 ± 2</td> </tr> </tbody> </table> <p>As for measuring voltage, please refer to the table A.</p>	Step	Temperature(°C)	1	25 ± 2	2	-55 ± 2	3	25 ± 2	4	125 ± 2		
Step	Temperature(°C)														
1	25 ± 2														
2	-55 ± 2														
3	25 ± 2														
4	125 ± 2														

(continued)

No.	Item	Performance	Test or inspection method
8	Robustness of Terminations	No sign of termination coming off, breakage of ceramic, or other abnormal signs.	<p>Reflow solder the capacitors on a P.C.Board shown in Appendix 2 and apply a pushing force of 17.7N with 10 ± 1s.</p> 
9	Bending	No mechanical damage.	<p>Reflow solder the capacitors on a P.C.Board shown in Appendix 1 and bend it for 2mm. (1mm is applied for 1.30mm or thinner thickness of Class2 items.)</p>  <p style="text-align: right;">(Unit : mm)</p>
10	Solderability	<p>New solder to cover over 75% of termination. 25% may have pin holes or rough spots but not concentrated in one spot. Ceramic surface of A sections shall not be exposed due to melting or shifting of termination material.</p>  <p style="text-align: center;">A section</p>	<p>Completely soak both terminations in solder at the following conditions.</p> <p>Solder : Sn-3.0Ag-0.5Cu or Sn-37Pb Temperature : $245 \pm 5^\circ\text{C}$(Sn-3.0Ag-0.5Cu) $235 \pm 5^\circ\text{C}$(Sn-37Pb) Soaking time : 3 ± 0.3s(Sn-3.0Ag-0.5Cu) 2 ± 0.2s(Sn-37Pb)</p> <p>Flux: Isopropyl alcohol (JIS K 8839) Rosin (JIS K 5902) 25% solid solution.</p>

(continued)

No.	Item		Performance		Test or inspection method									
11	Resistance to solder heat	External appearance	No cracks are allowed and terminations shall be covered at least 60% with new solder.		Completely soak both terminations in solder at the following conditions. 260±5°C for 10±1s. Preheating condition Temp.: 110 ~ 140°C Time : 30 ~ 60s. Solder : Sn-3.0Ag-0.5Cu or Sn-37Pb Flux : Isopropyl alcohol (JIS K 8839) Rosin (JIS K 5902) 25% solid solution. Leave the capacitors in ambient condition for 6 to 24h (Class1) or 24±2h (Class2) before measurement.									
		Capacitance	<table border="1"> <thead> <tr> <th colspan="2">Characteristics</th> <th>Change from the value before test</th> </tr> </thead> <tbody> <tr> <td>Class1</td> <td>C0G</td> <td>± 2.5 %</td> </tr> <tr> <td>Class2</td> <td>X7R</td> <td>± 7.5 %</td> </tr> </tbody> </table>			Characteristics		Change from the value before test	Class1	C0G	± 2.5 %	Class2	X7R	± 7.5 %

	Insulation Resistance	1,000MΩ min.			

*As for the initial measurement of capacitors (Class2) on number 7,11,12,13 and 14 leave capacitors at 150 –10,0°C for 1 hour and measure the value after leaving capacitors for 24±2h in ambient condition.

Appendix 1

P.C.Board for bending test

Appendix 2

P.C. Board for reliability test

(Unit : mm)

Type	Dimensions		
	a	b	c
TDK(EIA style)			
CGA6 (CC1210)	2.2	5.0	2.9
CGA7 (CC1808)	3.5	7.0	2.5
CGA8 (CC1812)	3.5	7.0	3.7
CGA9 (CC2220)	4.5	8.0	5.6

1. Material : Glass Epoxy(As per JIS C6484 GE4)

2. Thickness : 1.6mm

9. INSIDE STRUCTURE AND MATERIAL

No.	NAME	MATERIAL	
		Class1	Class2
1	Dielectric	CaZrO ₃	BaTiO ₃
2	Electrode	Nickel (Ni)	
3	Termination	Copper (Cu)	
4		Nickel (Ni)	
5		Tin (Sn)	

10. PACKAGING

Packaging shall be done to protect the components from the damage during transportation and storing, and a label which has the following information shall be attached.

- 1) Total number of components in a plastic bag for bulk packaging : 1000pcs
- 2) Tape packaging is as per 14. TAPE PACKAGING SPECIFICATION.

- 1) Inspection No.
- 2) TDK P/N
- 3) Customer's P/N
- 4) Quantity

*Composition of Inspection No.

Example F 8 A - 2 3 - 0 0 1
 (a) (b) (c) (d) (e)

- a) Line code
- b) Last digit of the year
- c) Month and A for January and B for February and so on. (Skip I)
- d) Inspection Date of the month.
- e) Serial No. of the day

*Composition of new Inspection No.

(Will be implemented on and after Jan. 1, 2019)

Example

I	F	9	A	2	3	A	0	0	1
---	---	---	---	---	---	---	---	---	---

 (a) (b) (c) (d) (e) (f) (g)

- (a) Prefix
- (b) Line code
- (c) Last digit of the year
- (d) Month and A for January and B for February and so on. (Skip I)
- (e) Inspection Date of the month.
- (f) Serial No. of the day(00 ~ ZZ)
- (g) Suffix(00 ~ ZZ)

* It is planned to shift to the new inspection No. on and after January 2019, but the implementation timing may be different depending on shipment bases. Until the shift is completed, either current or new composition of inspection No. will be applied.

11. RECOMMENDATION

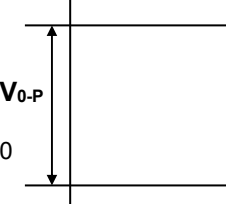

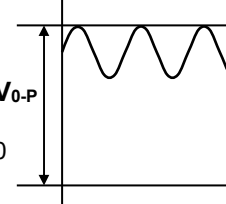

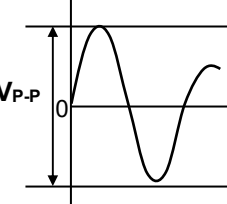

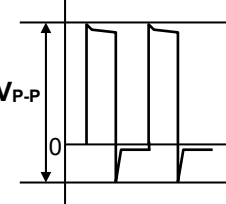

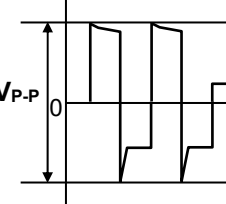

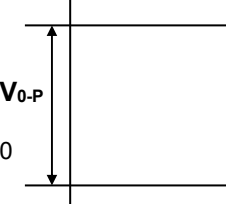

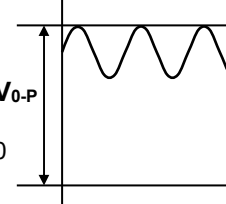

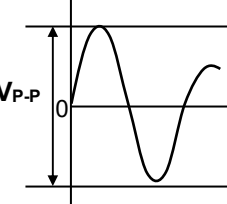

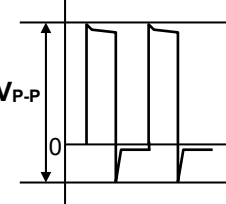

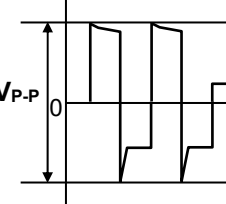

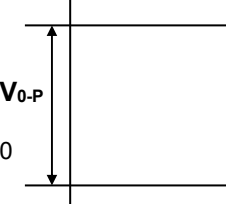

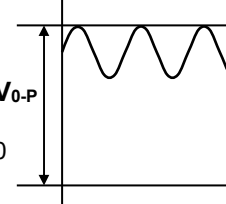

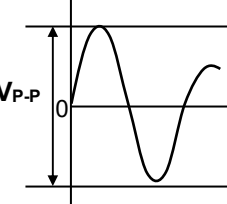

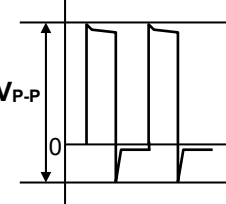

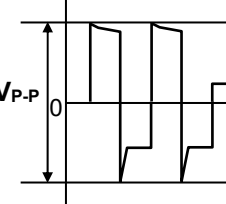

It is recommended to provide a slit (about 1mm wide) in the board under the components to improve washing Flux. And please make sure to dry detergent up completely before.

It is recommended to use activated flux (Chlorine content : less than 0.1wt%) such Rosin due to high voltage usage.

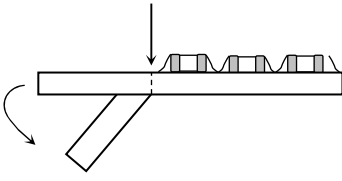

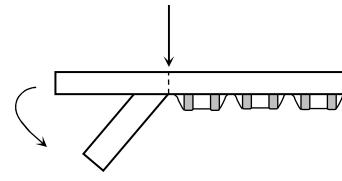

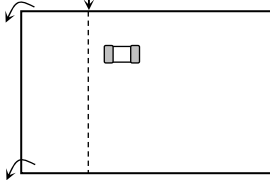

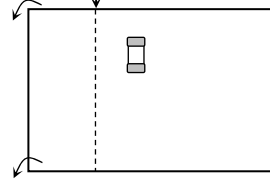

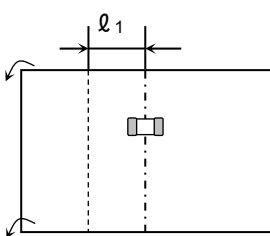

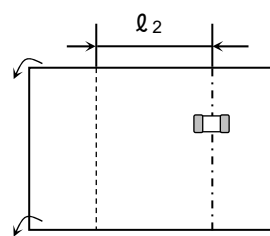

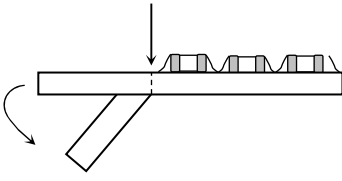

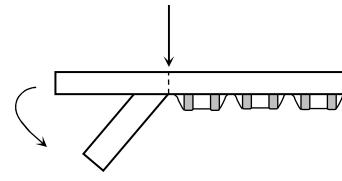

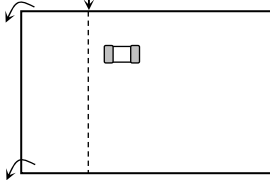

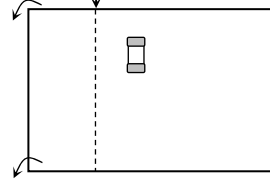

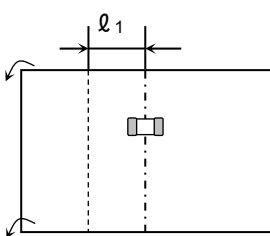

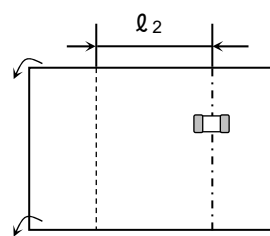

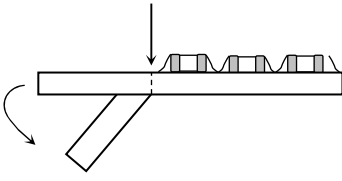

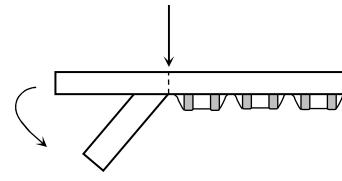

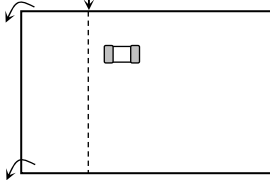

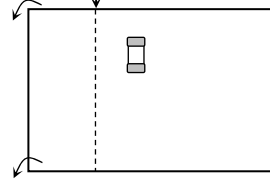

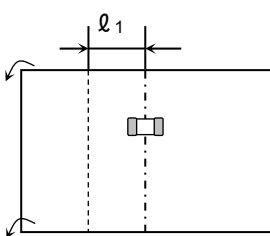

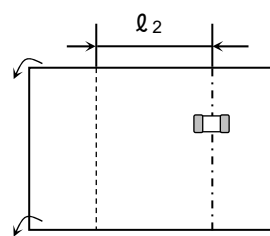

12. SOLDERING CONDITION

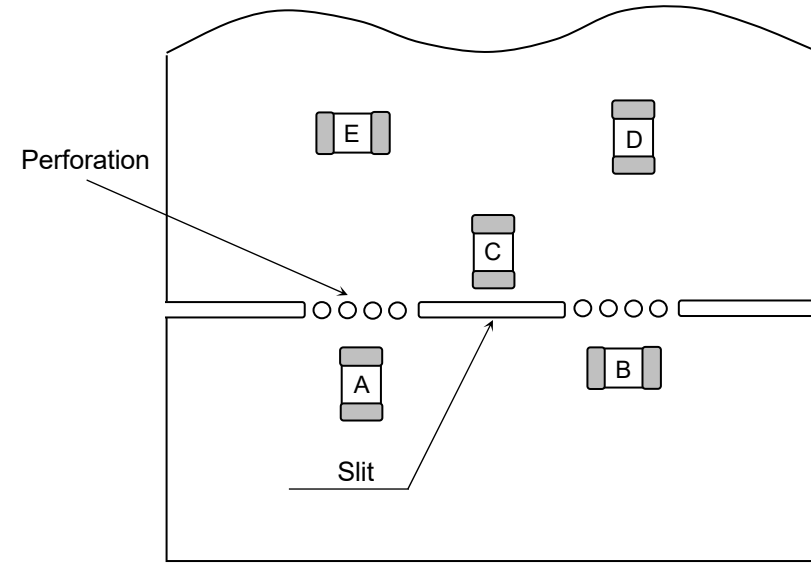

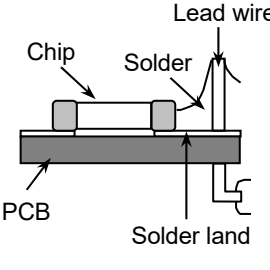

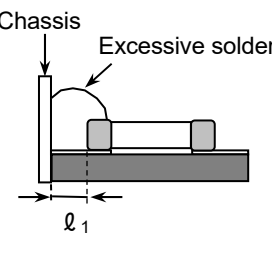

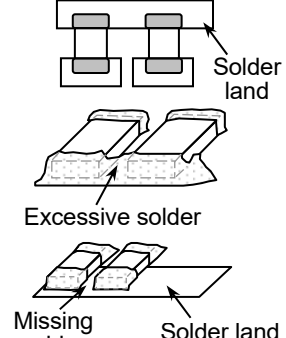

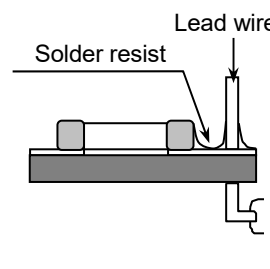

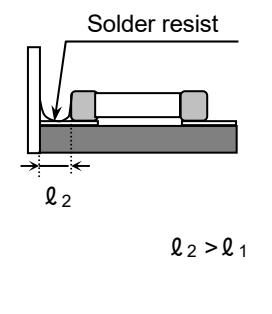

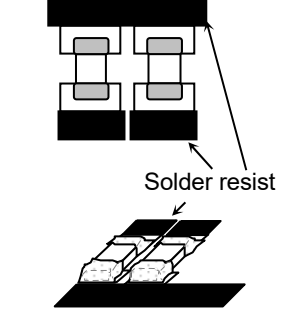

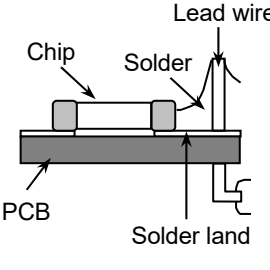

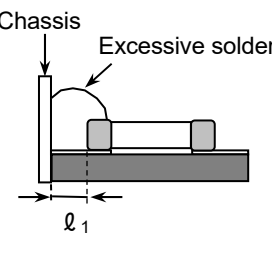

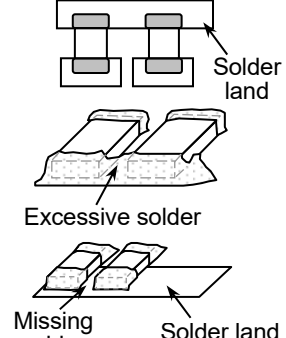

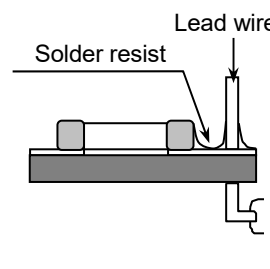

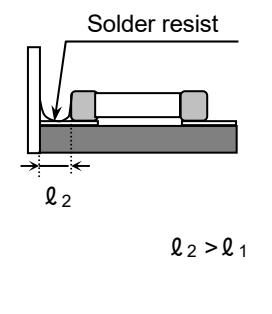

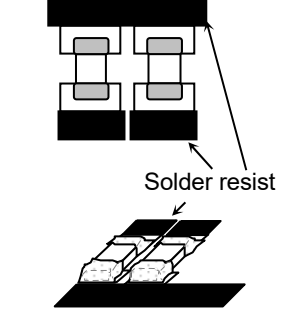

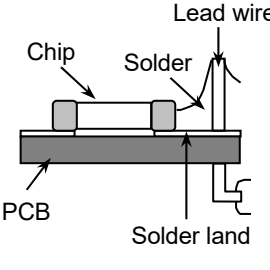

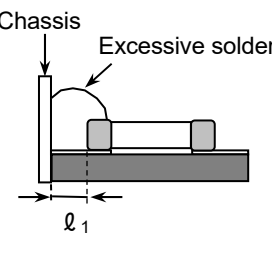

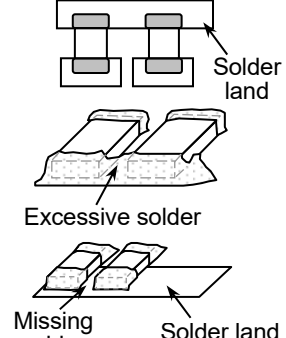

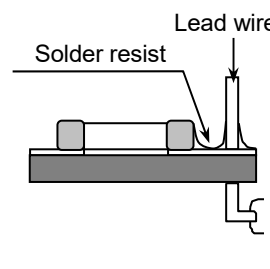

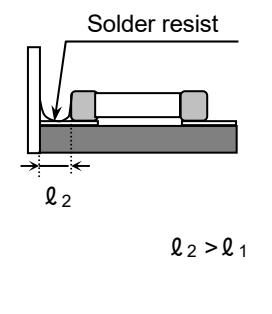

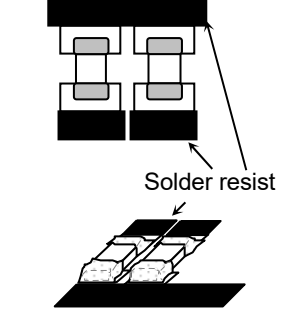

Reflow soldering only.

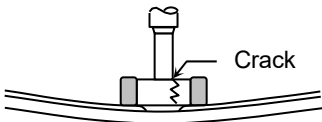

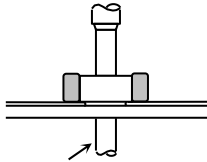

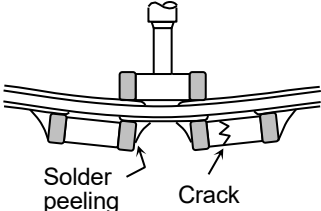

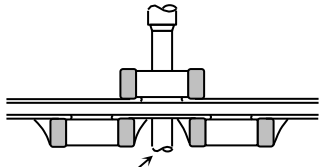

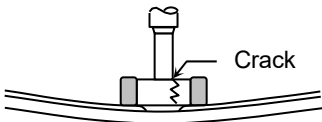

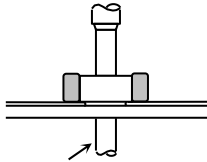

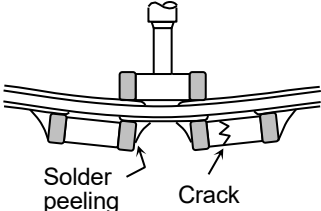

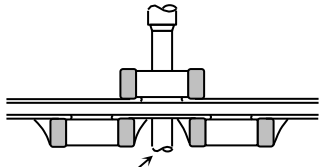

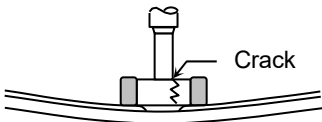

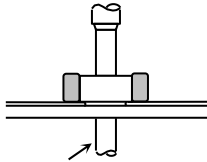

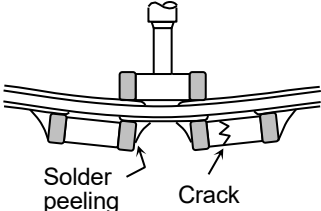

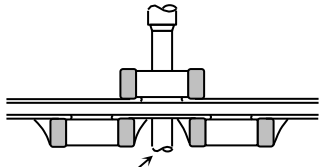

13. CAUTION

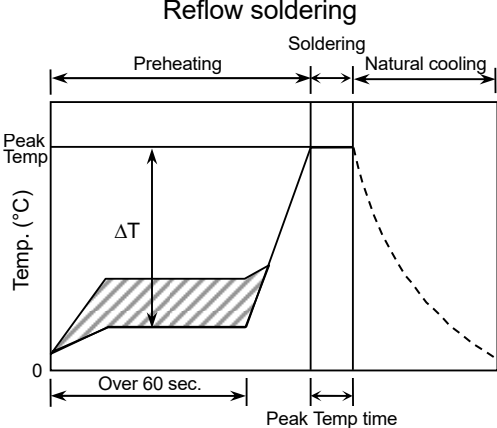

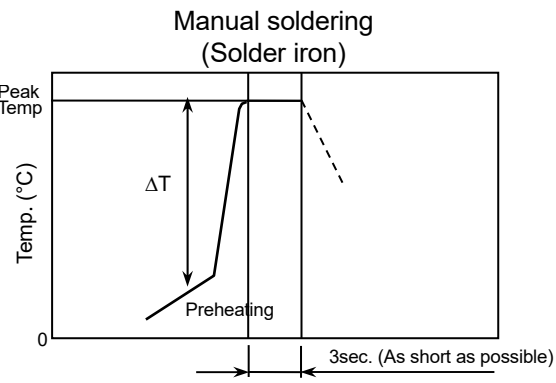

No.	Process	Condition																
1	Operating Condition (Storage, Use, Transportation)	<p>1-1. Storage, Use</p> <ol style="list-style-type: none"> 1) The capacitors must be stored in an ambient temperature of 5 to 40°C with a relative humidity of 20 to 70%RH. The products should be used within 6 months upon receipt. 2) The capacitors must be operated and stored in an environment free of dew condensation and these gases such as Hydrogen Sulphide, Hydrogen Sulphate, Chlorine, Ammonia and sulfur. 3) Avoid storing in sun light and falling of dew. 4) Do not use capacitors under high humidity and high and low atmospheric pressure which may affect capacitors reliability. 5) Capacitors should be tested for the solderability when they are stored for long time. <p>1-2. Handling in transportation In case of the transportation of the capacitors, the performance of the capacitors may be deteriorated depending on the transportation condition. (Refer to JEITA RCR-2335C 9.2 Handling in transportation)</p>																
2	Circuit design ⚠ Caution	<p>2-1. Operating temperature Operating temperature should be followed strictly within this specification, especially be careful with maximum temperature.</p> <ol style="list-style-type: none"> 1) Do not use capacitors above the maximum allowable operating temperature. 2) Surface temperature including self heating should be below maximum operating temperature. (Due to dielectric loss, capacitors will heat itself when AC is applied. Especially at high frequencies around its SRF, the heat might be so extreme that it may damage itself or the product mounted on. Please design the circuit so that the maximum temperature of the capacitors including the self heating to be below the maximum allowable operating temperature. Temperature rise at capacitor surface shall be below 20°C) 3) The electrical characteristics of the capacitors will vary depending on the temperature. The capacitors should be selected and designed in taking the temperature into consideration. <p>2-2. Operating voltage</p> <ol style="list-style-type: none"> 1) Operating voltage across the terminals should be below the rated voltage. When AC and DC are super imposed, V_{0-P} must be below the rated voltage. — (1) and (2) AC or pulse with overshooting, V_{P-P} must be below the rated voltage. — (3), (4) and (5) When the voltage is started to apply to the circuit or it is stopped applying, the irregular voltage may be generated for a transit period because of resonance or switching. Be sure to use the capacitors within rated voltage containing these Irregular voltage. <table border="1" data-bbox="475 1478 1445 2049"> <thead> <tr> <th data-bbox="475 1478 660 1523">Voltage</th> <th data-bbox="660 1478 922 1523">(1) DC voltage</th> <th data-bbox="922 1478 1184 1523">(2) DC+AC voltage</th> <th data-bbox="1184 1478 1445 1523">(3) AC voltage</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 1523 660 1751">Positional Measurement (Rated voltage)</td> <td data-bbox="660 1523 922 1751">  </td> <td data-bbox="922 1523 1184 1751">  </td> <td data-bbox="1184 1523 1445 1751">  </td> </tr> <tr> <th data-bbox="475 1780 660 1825">Voltage</th> <th data-bbox="660 1780 922 1825">(4) Pulse voltage (A)</th> <th data-bbox="922 1780 1184 1825">(5) Pulse voltage (B)</th> <th></th> </tr> <tr> <td data-bbox="475 1825 660 2049">Positional Measurement (Rated voltage)</td> <td data-bbox="660 1825 922 2049">  </td> <td data-bbox="922 1825 1184 2049">  </td> <td></td> </tr> </tbody> </table>	Voltage	(1) DC voltage	(2) DC+AC voltage	(3) AC voltage	Positional Measurement (Rated voltage)				Voltage	(4) Pulse voltage (A)	(5) Pulse voltage (B)		Positional Measurement (Rated voltage)

5	Soldering	<p>5-7.Soldering rework using spot heater Heat stress during rework may possibly be reduced by using a spot heater (also called a “blower”) rather than a soldering iron. It is applied only to adding solder in the case of insufficient solder amount.</p> <p>1) Reworking using a spot heater may suppress the occurrence of cracks in the capacitor compared to using a soldering iron. A spot heater can heat up a capacitor uniformly with a small heat gradient which leads to lower thermal stress caused by quick heating and cooling or localized heating. Moreover, where ultra-small capacitors are mounted close together on a printed circuit board, reworking with a spot heater can eliminate the risk of direct contact between the tip of a soldering iron and a capacitor.</p> <p>2) Rework condition If the blower nozzle of a spot heater is too close to a capacitor, a crack in the capacitor may occur due to heat stress. Below are recommendations for avoiding such an occurrence. Keep more than 5mm between a capacitor and a spot heater nozzle. The blower temperature of the spot heater shall be lower than 400°C. The airflow shall be set as weak as possible. The diameter of the nozzle is recommended to be 2mm(one-outlet type).The size is standard and common. Duration of blowing hot air is recommended to be 30s or less, considering surface area of the capacitor and melting temperature of solder. The angle between the nozzle and the capacitor is recommended to be 45degrees in order to work easily and to avoid partial area heating. As is the case when using a soldering iron, preheating reduces thermal stress on capacitors and improves operating efficiency.</p> <p>• Recommended rework condition (Consult the component manufactures for details.)</p> <table border="1" data-bbox="507 1131 1417 1496"> <tbody> <tr> <td>Distance from nozzle</td> <td>5mm and over</td> </tr> <tr> <td>Nozzle angle</td> <td>45degrees</td> </tr> <tr> <td>Nozzle temp.</td> <td>400°C and less</td> </tr> <tr> <td>Airflow</td> <td>Set as weak as possible (The airflow shall be the minimum value necessary for solder to melt in the conditions mentioned above.)</td> </tr> <tr> <td>Nozzle diameter</td> <td>φ2mm (one-outlet type)</td> </tr> <tr> <td>Blowing duration</td> <td>30s and less</td> </tr> </tbody> </table> <p>• Example of recommended spot heater use</p>  <p>5-8. 5	Soldering	<p>5-9. Countermeasure for tombstone</p> <p>The misalignment between the mounted positions of the capacitors and the land patterns should be minimized. The tombstone phenomenon may occur especially the capacitors are mounted (in longitudinal direction) in the same direction of the reflow soldering.</p> <p>(Refer to JEITA RCR-2335C Annex A (Informative) Recommendations to prevent the tombstone phenomenon)</p>
6	Cleaning	<p>1) If an unsuitable cleaning fluid is used, flux residue or some foreign articles may stick to chip capacitors surface to deteriorate especially the insulation resistance.</p> <p>2) If cleaning condition is not suitable, it may damage the chip capacitors.</p> <p>2)-1. Insufficient washing</p> <p>(1) Terminal electrodes may corrode by Halogen in the flux.</p> <p>(2) Halogen in the flux may adhere on the surface of capacitors, and lower the insulation resistance.</p> <p>(3) Water soluble flux has higher tendency to have above mentioned problems (1) and (2).</p> <p>2)-2. Excessive washing</p> <p>When ultrasonic cleaning is used, excessively high ultrasonic energy output can affect the connection between the ceramic chip capacitor's body and the terminal electrode. To avoid this, following is the recommended condition.</p> <p style="text-align: center;">Power : 20 W/ ℓ max. Frequency : 40 kHz max. Washing time : 5 minutes max.</p> <p>2)-3. If the cleaning fluid is contaminated, density of Halogen increases, and it may bring the same result as insufficient cleaning.</p>
7	Coating and molding of the P.C.board	<p>1) When the P.C.board is coated, please verify the quality influence on the product.</p> <p>2) Please verify carefully that there is no harmful decomposing or reaction gas emission during curing which may damage the chip capacitors.</p> <p>3) Please verify the curing temperature.</p>
8	<p>Handling after chip mounted</p> <p>⚠ Caution</p>	<p>1) Please pay attention not to bend or distort the P.C.board after soldering in handling otherwise the chip capacitors may crack.</p> <div style="text-align: center;">  </div>

No.	Process	Condition																
8	Handling after chip mounted  Caution	<p>2) Printed circuit board cropping should not be carried out by hand, but by using the proper tooling. Printed circuit board cropping should be carried out using a board cropping jig as shown in the following figure or a board cropping apparatus to prevent inducing mechanical stress on the board.</p> <p>(1) Example of a board cropping jig Recommended example: The board should be pushed from the back side, close to the cropping jig so that the board is not bent and the stress applied to the capacitor is compressive. Unrecommended example: If the pushing point is far from the cropping jig and the pushing direction is from the front side of the board, large tensile stress is applied to the capacitor, which may cause cracks.</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="454 593 758 884"> <p>Outline of jig</p>  </div> <div data-bbox="758 593 1444 862"> <table border="1"> <thead> <tr> <th data-bbox="758 593 1093 638">Recommended</th> <th data-bbox="1093 593 1444 638">Unrecommended</th> </tr> </thead> <tbody> <tr> <td data-bbox="758 638 1093 862">  </td> <td data-bbox="1093 638 1444 862">  </td> </tr> </tbody> </table> </div> </div> <p>(2) Example of a board cropping machine</p> <p>An outline of a printed circuit board cropping machine is shown below. The top and bottom blades are aligned with one another along the lines with the V-grooves on printed circuit board when cropping the board.</p> <p>Unrecommended example: Misalignment of blade position between top and bottom, right and left, or front and rear blades may cause a crack in the capacitor.</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="550 1176 965 1444"> <p>Outline of machine</p>  </div> <div data-bbox="965 1176 1412 1444"> <p>Principle of operation</p>  </div> </div> <div style="text-align: center; margin-top: 20px;"> <p>Cross-section diagram</p>  </div> <table border="1" style="width: 100%; margin-top: 20px; text-align: center;"> <thead> <tr> <th data-bbox="638 1668 821 1758">Recommended</th> <th colspan="3" data-bbox="821 1668 1348 1713">Unrecommended</th> </tr> <tr> <th data-bbox="638 1758 821 1803"></th> <th data-bbox="821 1713 997 1803">Top-bottom misalignment</th> <th data-bbox="997 1713 1173 1803">Left-right misalignment</th> <th data-bbox="1173 1713 1348 1803">Front-rear misalignment</th> </tr> </thead> <tbody> <tr> <td data-bbox="638 1803 821 2094">  </td> <td data-bbox="821 1803 997 2094">  </td> <td data-bbox="997 1803 1173 2094">  </td> <td data-bbox="1173 1803 1348 2094">  </td> </tr> </tbody> </table>	Recommended	Unrecommended			Recommended	Unrecommended				Top-bottom misalignment	Left-right misalignment	Front-rear misalignment

No.	Process	Condition						
8	Handling after chip mounted  Caution	<p>3) When functional check of the P.C.board is performed, check pin pressure tends to be adjusted higher for fear of loose contact. But if the pressure is excessive and bend the P.C.board, it may crack the chip capacitors or peel the terminations off. Please adjust the check pins not to bend the P.C.board.</p> <table border="1" data-bbox="475 387 1433 685"> <thead> <tr> <th data-bbox="475 387 616 450">Item</th> <th data-bbox="616 387 1034 450">Not recommended</th> <th data-bbox="1034 387 1433 450">Recommended</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 450 616 685">Board bending</td> <td data-bbox="616 450 1034 685">  </td> <td data-bbox="1034 450 1433 685">  </td> </tr> </tbody> </table>	Item	Not recommended	Recommended	Board bending		
Item	Not recommended	Recommended						
Board bending								
9	Handling of loose chip capacitors	<p>1) If dropped the chip capacitors may crack. Once dropped do not use it. Especially, the large case sized chip capacitors are tendency to have cracks easily, so please handle with care.</p>  <p style="text-align: center;">Floor</p> <p>2) Piling the P.C.board after mounting for storage or handling, the corner of the P.C. board may hit the chip capacitors of another board to cause crack.</p> 						
10	Capacitance aging	<p>The capacitors (Class 2) have aging in the capacitance. They may not be used in precision time constant circuit. In case of the time constant circuit, the evaluation should be done well.</p>						
11	Estimated life and estimated failure rate of capacitors	<p>As per the estimated life and the estimated failure rate depend on the temperature and the voltage. This can be calculated by the equation described in JEITA RCR-2335C Annex F (Informative) Calculation of the estimated lifetime and the estimated failure rate (Voltage acceleration coefficient : 3 multiplication rule, Temperature acceleration coefficient : 10°C rule) The failure rate can be decreased by reducing the temperature and the voltage but they will not be guaranteed.</p>						

No.	Process	Condition
12	Caution during operation of equipment	<p>1) A capacitor shall not be touched directly with bare hands during operation in order to avoid electric shock. Electric energy held by the capacitor may be discharged through the human body when touched with a bare hand. Even when the equipment is off, a capacitor may stay charged. The capacitor should be handled after being completely discharged using a resistor.</p> <p>2) The terminals of a capacitor shall not be short-circuited by any accidental contact with a conductive object. A capacitor shall not be exposed to a conductive liquid such as an acid or alkali solution. A conductive object or liquid, such as acid and alkali, between the terminals may lead to the breakdown of a capacitor due to short circuit</p> <p>3) Confirm that the environment to which the equipment will be exposed during transportation and operation meets the specified conditions. Do not to use the equipment in the following environments.</p> <p>(1) Environment where a capacitor is splattered with water or oil (2) Environment where a capacitor is exposed to direct sunlight (3) Environment where a capacitor is exposed to Ozone, ultraviolet rays or radiation (4) Environment where a capacitor exposed to corrosive gas(e.g. hydrogen sulfide, sulfur dioxide, chlorine. ammonia gas etc.) (5) Environment where a capacitor exposed to vibration or mechanical shock exceeding the specified limits. (6) Atmosphere change with causes condensation</p>
13	Others  Caution	<p>The product listed in this specification is intended for use in automotive applications under-normal operation and usage conditions.</p> <p>The product is not designed or warranted to meet the requirements of application listed below, whose performance and/or quality requires a more stringent level of safety or reliability, or whose failure, malfunction or defect could cause serious damage to society, person or property. Please understand that we are not responsible for any damage or liability caused by use of the products in any of the applications below or for any other use exceeding the range or conditions set forth in this specification sheet. If you intend to use the products in the applications listed below or if you have special requirements exceeding the range or conditions set forth in this specification, please contact us.</p> <p>(1) Aerospace/Aviation equipment (2) Transportation equipment (electric trains, ships etc.) (3) Medical equipment (Excepting Pharmaceutical Affairs Law classification Class1, 2) (4) Power-generation control equipment (5) Atomic energy-related equipment (6) Seabed equipment (7) Transportation control equipment (8) Public information-processing equipment (9) Military equipment (10) Electric heating apparatus, burning equipment (11) Disaster prevention/crime prevention equipment (12) Safety equipment (13) Other applications that are not considered general-purpose applications</p> <p>When designing your equipment even for general-purpose applications, you are kindly requested to take into consideration securing protection circuit/device or providing backup circuits in your equipment. In addition, although the product listed in this specification is intended for use in automotive applications as described above, it is not prohibited to use for general electronic equipment, whose performance and/or quality doesn't require a more stringent level of safety or reliability, or whose failure, malfunction or defect could not cause serious damage to society, person or property. Therefore, the description of this caution will be applied, when the product is used in general electronic equipment under a normal operation and usage conditions.</p>

14. TAPE PACKAGING SPECIFICATION

1. CONSTRUCTION AND DIMENSION OF TAPING

1-1. Dimensions of carrier tape

Dimensions of plastic tape shall be according to Appendix 3, 4.

1-2. Bulk part and leader of taping

1-3. Dimensions of reel

Dimensions of $\varnothing 178$ reel shall be according to Appendix 5, 6.

Dimensions of $\varnothing 330$ reel shall be according to Appendix 7, 8.

1-4. Structure of taping

2. CHIP QUANTITY

Please refer to the table A in the end of the specification.

3. PERFORMANCE SPECIFICATIONS

3-1. Fixing peeling strength (top cover tape)

$0.05\text{N} < \text{Peeling strength} < 0.7\text{N}$

3-2. Carrier tape shall be flexible enough to be wound around a minimum radius of 30mm with components in tape.

3-3. The missing of components shall be less than 0.1%

3-4. Components shall not stick to fixing tape.

3-5. When removing the cover tape, there shall not be difficulties by unfitting clearance gap, burrs and crushes of cavities. Also the sprocket holes shall not be covered by absorbing dust into the suction nozzle.
