## Introduction

Product Features

- Direct Mating Connectors for PC Boards, 2-8 Positions, up to 6 A Current Carrying Capacity
- Indirect Mating Connectors, 1-8 Positions, up to 16 A Current Carrying Capacity
Variable Keying
- Double Wire Termination possible

Tyco Electronics' newly designed AMP multifitting Mark II Connector System was developed according to the latest connector design standards.

The requirements of advanced In-Line mating technology for the components and contacts of pc boards are incorporated in the direct and indirect versions of these connector systems.

This system is suitable for a wide wire size range. Current carrying capacity is 16 A maximum.

Double termination is possible with 0.5 and 0.5 $\mathrm{mm}^{2}$ or 0.5 and $0.75 \mathrm{~mm}^{2}$ conductors.

The connectors are available in 1 - to 8 -positions (indirect) resp. 2- to 8positions (direct) with an exterior locking device.

Interior locking options are available on request.

Supplied in chain and provided with all keying and polarisation ribs, the connectors can be operated economically with modern Application Tooling Equipment.

## Introduction

## AMP MONO-SHAPE Connectors in In-Line Mating Technology

AMP MONO-SHAPE connectors represent a valid solution to the ever-increasing requirements for production and application flexibility. They are high productivity, great flexibility, quality, minimum applied cost. AMP MONO-SHAPE productline includes a full range of 5.0 mm pitch modular connectors contents with similar outer shape, several variation in the mating area such as PC Board and $6.3 \times 0.8 \mathrm{~mm}$ tabs (RAST 5 ), plus a version for harness shunts.
AMP MONO-SHAPE connection system adopts the IDC termination technology, which improves application results and quality level.
The AMP MONO-SHAPE product range, combined with the performances and properties offered by the termination system, allow to manufacture extremely complicated harness structures while still maintaining high production levels.

## Technical Features

- IDC Connector system design to maximise the full integration with the
 application tooling assuring total flexibility in harness design.
- High current system, up to 16 Ampere, designed to satisfy several appliance requirements.

ID Contact designed to accept standard discrete wires ranging from 0.5 up to $1.5 \mathrm{~mm}^{2}$, according to the connector configuration.

The connector incorporates modern in-line mating technology on a 5.0 mm centerline with no loss of spacing and a variety of keying possibilities.
■ Wiring faults eliminated through high automation.

- Approvals: VDE: 4751-1431-4024 / A 10A and 4751-1431-4024 / A 9E

Introduction

## AMP MONO-SHAPE MARK II Connectors in In-Line Mating Technology

MONO-SHAPE Mark II
Connector System was developed according to the newest level of knowledge and standard.
The requirements of advanced In-Line mating technology for the component and contact of printed circuit board (PCB) is granted by the two versions TAB and PCB connector systems.

System is designed to maximise the full integration with the application tooling, assuring the flexibility in the harness design.

This system is suitable for a wide wire size range of conductor and current carrying capacity up to 16 A .
Double termination is possible with 0.5 and $0.5 \mathrm{~mm}^{2}$ or 0.5 and $0.75 \mathrm{~mm}^{2}$ conductors.
(See application spec. 114-20104 for details)
The connectors are available in 1 to 10 positions (TAB Version) with interior locking device and 2 to 12 positions (PCB Version)
Connectors are supplied in chain and provided with all keying and polarisation ribs the connectors can be handled automatically with a modern Application Tooling Equipment.
Wiring faults checked and eliminated through high automation.

Application Machines shall provide to print a colour code mark on the connectors cover after wire termination, feasible on all connectors configuration, for connector identification on harnesses.

## Technical Features

## Application Tooling

Entry Level Semi-Automatic IDC Bench Machines
SIM 500P
Part No. 528376-2
SIM 500T
Part No. 528377-2

In the Entry Level concept, the application process is shared by two different semi-automatic machines.

The SIM 500P prepares the AMP multifitting Mark II bandoliered IDC connectors. The machine removes the connector from the chain and cuts the keying ribs.

## SIM 500P

## Technical Features

- Processing of all versions of the AMP multifitting Mark II connector system with only minor set up changes.
- Cutting and reliable removal of the reel clips.
- Cutting and reliable removal of the coding and polarisation ribs by means of a preset cutting block.
- Nest capacity per machine cycle
- one connector 4- to 8-pos.
- two connectors 2 - and 3-pos.
- four connectors 1-position
- Integrated monitoring of the connector supply.
- Simple operator interface.

## Technical Data

## Power Supply:

230 V AC, 50 Hz

## Air Pressure:

6 bar

## Cycle Time:

approx. 4 s / connector package (without handling time)

Next, the prepared IDC connectors are applied by the SIM 500T.

To facilitate this, the individual IDC connectors are loaded into a nest and moved automatically into the termination station.

The manually inserted wires are, according to a program,
terminated into the appropriate insulation displacement slots. The cover is then separated from the housing, turned and pushed into final position.
The nest, including the finished harness module, is removed from the easily accessed track.

SIM 500T

## Technical Features

- Application of all versions of the AMP multifitting Mark II connector, with only minor set up changes.
- Termination of the wire with active support of the IDC contact.
- Termination of two wires (double wire termination) programmable.
- Connector fixture, incorporating three nests for max. 12 positions each.
- Accessible and easily interchangeable mechanical program rail.
- By utilising several connector fixtures and program rails, output and set up times can be optimised.
Simple operator interface.

## Technical Data

Power Supply:
230 V AC, 50 Hz

## Air Pressure:

6 bar
Cycle Time:
approx. 1.2 s / line (without handling time)

## IDC Workstation SIM 50

This semi-automatic machine was designed for the sequential processing of AMP multifitting Mark II IDC connector system and its variations such as direct and indirect mating connector with interior or exterior locking.

A processing sequence can consist of one or more IDC connectors of the same or different numbers of positions, but a maximum total of 12 positions.

The specific key coding of the connectors is performed during the termination process by an integrated cutting device.

The wires are manually fed into the machine and then automatically terminated.

Integrated control tests ensure a high quality product.

## Application Tooling (continued)

## Technical Features

- Processing of all versions of the AMP multifitting Mark II connector system without additional set up time.
rermination of the wire with active support of the IDC contact.
- Termination of two wires in the same slot is programmable.
- Colour coding on the connector cover possible.
- Wire exit angle can be bent $180^{\circ}$.
- Short set up and changeover times.

■ High output.

- Correct wire insertion length and key codings are continually checked.

■ Good / bad sorter; faulty connections will be destroyed.

## Technical Data

Air Pressure:
6 bar
Wire Size Range:
$0.35 \mathrm{~mm}^{2}$ up to $1.5 \mathrm{~mm}^{2}$
Insulation Diameter Range:

## Flexible Harness Maker FHM

The FHM is a fully-automatic machine featuring modular set up. It is built to manufacture harnesses by processing both IDC connectors and crimp terminals.

The basic machine includes a 12 wire selector, a station that cuts the wires to length, a stripping station, a doublecrimp unit, two crimping presses and wire end ejector for doubling and daisy chains.

A gripper unit takes the wire from the base machine and transfers it to the attached IDC station. Sequential processing allows the manufacturing of cross-overs and bridges as well as double-crimps, depending on the type of IDC connector used.

The IDC workstations are easily reconfigured for processing our different IDC connector systems. They include all the necessary processing operations for IDC termination with minimum change-over and set up times.
Quality checks integrated in the manufacturing process ensure the highest quality harness for every production run.

Application Tooling (continued)

## Technical Features

- Manufacturing of harnesses with 2.5 mm pitch IDC connectors and/or 5.0 mm pitch IDC connectors and/or with crimp terminals.
- IDC Workstations are available for the following connector systems:
- AMP DUOPLUG 2.5
- AMP DUOPLUG 2.5 Mark II
- AMP DUOPLUG Power
- AMP multifitting Mark II
- AMP MONO-SHAPE Mark II
- The IDC Workstations can also be used as separate semi-automatic machines with manual wire transfer.

■ The specific key coding of the IDC connector is done on the IDC Workstation.

## IDC Harness Maker IHM Mark III

The new IHM Mark III is a very high performance, fullyautomatic machine designed to manufacture parallel jumper harnesses using IDC technology.

The simultaneous feeding of up to 21 wires guarantees high productivity and flexibility and a choice of 2.5 mm or 5.0 mm pitch IDC systems.

The gripper unit on the left side of the machine is able to spread the wires in both directions to enable the production of harnesses using both 2.5 mm and 5.0 mm pitch connectors at the same time.

Available options are a stripper crimper unit with an integrated crimp force analyser and a good/bad sorting unit.

The IDC workstations are easily reconfigured for processing our different IDC connector systems. They include all the necessary processing operations for IDC termination with minimum change-over and set up times.
Quality checks integrated in the manufacturing process ensure the highest quality harness for every production run.

## AMP Standard Timer Connectors in In-Line Mating Technology

AMP Standard Timer connectors according to RAST 5.0 mm standard have been developed to connect RAST 5 components (like motors, leach pumps, water level regulators, relays and push-button switches) in the Household Appliances Industry.
They meet industry requirements, for example multiple position connectors, secure connection even at inclining mating as well as a sturdy contact design.
AMP Standard Power Timer contacts, for use with Standard Timer housings, are suitable for high density and high current capacity up to 16 A .
Housing is designed for end-to-end stacking without contact loss. They are available in different keying and locking versions from 2 - positions to 12-positions.
Standard Timer contacts can be used with stranded wires from $0.5 \mathrm{~mm}^{2}$ to $2.5 \mathrm{~mm}^{2}$ and can be double terminated. Of course, the corresponding tooling is available, too.
AMP Standard Timer connectors are tested by VDE and fulfil all requirements acc. to VDE 0700 (air gap, creepage distance, glow wire test, ball pressure test, creepage current strength).
UL recognised component.
