

# HIGH PERFORMANCE RELAYS, CONTACTORS, SOLENOIDS AND POWER DISTRIBUTION UNITS

## Relays, Contactors, Solenoids, and Power Distribution

TE Connectivity (TE) high-performance relays, contactors and switches are designed specifically to operate in extremely rigorous environments in military and aerospace applications. Our relay products include COTS (commercial off-the-shelf), Mil-Spec, plus highly specialized, and custom-designed products. These high-performance products are designed to withstand extreme shock, vibration, temperature and altitude.

### Brands You Trust

Among our portfolio are some of the more respected brands in the high performance switching industry:

- **CII** military and aerospace relays, sensors and custom solenoids
- **HARTMAN** aerospace power relays, contactors, sensors and power distribution units
- **KILOVAC** high voltage relays, contactors, protective relays and power distribution units

This brochure provides an overview of our product line. It includes products with switching capabilities from dry circuit up through 1000 A. Some relays are capable of switching up to 6 GHz signals, while others can handle voltages up to 70 kV. Other types combine solid-state circuits with electromechanical or solid state outputs to create timers, sensors, monitors and controllers. And they are specifically designed for operation in extremes of temperature, shock, vibration and altitude.

### Relays

TE's high-performance relays are designed to perform reliably in extremely rigorous environments in military and aerospace applications. Our balanced force design provides the benefits of consistently high contact pressure, reduced bounce and less arcing, helping to lead to extended contact life.

### Contactors

TE delivers the switching performance demanded by aerospace and defense applications with our light-weight contactors, which offer continuous current ratings up to 1000 A and voltages up to 1800 VDC in very compact, sealed packages.

### Solenoids

Our solenoids are also designed and manufactured on a custom basis to precisely meet your demanding high-performance actuation requirements. We offer a broad range of coil, termination and plunger options, and push, pull and combination motion is available.

### Power Distribution

HARTMAN AC and DC power distribution units (PDUs) and KILOVAC HVDC PDUs are designed, built and qualified to meet your specific requirements, serving the commercial and military industries.

## Global Contacts

## Introduction

### Section 1

#### Low Signal Relays

CII brand low signal electromechanical relays are designed and built to perform under the most demanding environmental conditions in military, aerospace and commercial applications. Relays are rated from signal level up to 10 amps switching in a variety of package sizes, mounting configurations, and termination options. There are both non-latching and latching designs. Standard, bifilar, and sensitive coils are available with optional diode suppression. Relays are qualified to MIL-PRF-39016, MIL-R-5757, MIL-PRF-28776, MS27245, and MS27247.

### Section 2

#### High Frequency, Low Signal Relays

TE MW Series relays are noted for their improved signal repeatability and RF switching capabilities to the 6 GHz microwave range in a hermetically sealed, subminiature package. Excellent signal isolation, stable insertion loss, and low VSWR are provided. Standard versions are available for applications ranging from wireless communications to precision high-speed test equipment. High performance versions are available for even more demanding environmental conditions.

### Section 3

#### High Vibration Relays

TE High Vibration MAV and MSV Series TO-5 relays are designed to withstand vibration levels to 380 G's at 200 Hz. The small footprint and low profile offer the customer considerable space savings and permits high density packaging without sacrificing quality performance. Relays are available as standard or sensitive with a variety of coil voltages. The high shock and vibration ratings of MAV and MSV series make them well suited for the rigorous demands of military and aerospace usage.

### Section 4

#### High Reliability Relays and Contactors for Space Applications

TE offers a variety of relay solutions for hi-reliability and space environments. Our space products begin as relays manufactured to established QPL mil specs, then receiving additional processing and testing tailored to the customer's specific application needs.

Clean room construction, highly controlled processes, tracking and serialization of data, quality audits throughout the manufacturing cycle, along with extensive product testing, assure our customers that their hi-reliability standards and requirements will be met or exceeded.

### Section 5

#### Mid-Range Relays

TE CII brand Mid-range relays offer critical size and weight savings in aircraft applications by providing efficient power switching in a compact package. Relays vary in size from the compact 5 amp package all the way up to a 50 amp version in a 1 inch cube enclosure.

Our balanced force design provides the benefit of consistently high contact pressure, reduced bounce, and less arcing leading to extended contact life. A variety of coil options are available which allow the AC or DC control.

Terminal styles include socket pins, solder pins, and solder hooks. Each series comes with a variety of mounting options. Relays are qualified to MIL-PRF-6106 and MIL-PRF-83536.

### Section 6

#### Lightweight AC and DC Contactors/Relays and Sensing Devices

TE offers some of the lightest, smallest and most efficient AC and DC contactors available today for aerospace commercial and military electrical power systems. These contactors are available in multiple contact configurations, current/voltage ratings, auxiliary contact configurations, and mounting styles.

TE prides itself in having the technical experience, knowledge and ability to offer their customers

products that meet and exceed their demanding requirements.

HARTMAN AC and DC contactors are light weight and environmentally (gasket) sealed. Hermetically sealed enclosures are available for the most severe environmental conditions or altitudes above 50,000 feet. Multiple main contact configurations and auxiliary contact configurations are available. AC and DC contactors are designed to meet the applicable requirements of MIL-PRF-6106 and/or specific customer specifications.

TE also has Sensing and Protective Devices available with various functions, including current monitoring, reverse current protection, over/under voltage protection, over/under frequency protection, automatic drop-out for starting applications and three-phase remote power controllers with various over current trip functions.

TE offers HARTMAN brand products that are designed for use in the Space Industry. The N-Series relays offer highly reliable switching for 115 Volt AC and 28 Vdc circuits. These units are available with multiple contact configurations, latching or non-latching operating modes, and with current ratings up to 100 amperes and are designed to meet the requirements of MIL-PRF-6106. Because they are ITAR restricted, they are not shown in this catalog.

## Introduction (Continued)

### Section 7

#### Lightweight DC Relays and Contactors

TE KILOVAC DC contactors deliver the switching performance demanded by aerospace and defense applications. These lightweight contactors offer continuous current ratings up to 500 amps at 900 Volts DC in very compact packages. Standard and customized individual contactors are available, as well as custom-designed, fully-qualified main power and high voltage distribution assemblies.

### Section 8

#### Time Delay Relays

Our broad line of time delay relays includes delay-on-operate, fixed and adjustable; delay-on-release, fixed & adjustable; and interval timers with relay or solid state outputs. All are hermetically sealed with a variety of package & mounting configurations. Contact ratings range from 2 to 10A, with MIL qualification on 10A versions. Also available are MIL approved subminiature digital timing modules.

### Section 9

#### Sensors

Our versatile line of sensors includes AC & DC voltage sensors, and AC frequency and phase sensors. All are hermetically sealed, with a variety of mounting options, and relay contact outputs.

### Section 10

#### Solid State Relays

The product line includes both AC and DC versions, with output ratings up to 25A. AC relays rated at 2A, 10A, & 25A feature zero voltage turn-on for reduced EMI. DC relays are offered with ratings up to 2A in several miniature hermetically sealed package configurations, some with optional isolated status lines and/or short circuit protection.

### Section 11

#### Protective Relays

TE Protective Relays are designed and manufactured in compliance with UL, CSA, IEEE, military and customer specifications. These relays are in use on applications such as portable generators, automatic transfer switches, irrigation pumps, refineries, oil fields, aircraft, ships and nuclear submarines. A long list of TE protective relays are fully qualified by the military for use in ground support equipment, aircraft and

Navy ships high-shock applications. These are managed in the DOD supply system under NSN classes 5945 and 6110.

### Section 12

#### Specialty Relays

TE AGASTAT brand relays feature unmatched accuracy and reliability in a pneumatic timer. Representing over 50 years of research and development in this specialized field, TE AGASTAT brand relays offer unprecedented economy and reliability under severe operating conditions. Voltages range from 6 to 550 VAC/VDC and timing ranges from 0.1 seconds to 60 minutes.

Relays are available in off and on delay models as commercial and nuclear qualified. A broad line of general purpose, time delay, and magnetic latching control relays are also offered.

In addition to our AGASTAT brand relays, TE MDR rotary relays provide good durability and excellent resistance to shock and vibration in specialized applications. Relays are rated up to 10 amps switching, 4 to 24 poles, latching option, and are available in 2 sizes (2-1/2 and 4 inch diameters). MDR relays are also offered as commercial grade.

### Section 13

#### Solenoids

Our solenoids are designed and manufactured on a custom basis to precisely meet your demanding high performance actuation requirements.

### Section 14

#### Power Distribution Units

TE HARTMAN AC and DC power distribution units (PDUs) and KILOVAC DC PDUs are designed, built and qualified to meet your specific requirements serving both the commercial and military industries.

Allow us to apply our significant expertise in integrating bus-bar and plug-in contactors, relays, sensors, monitors, circuit breakers, shunts, generator control units and other components into compact, lightweight power distribution units.

### Section 15

#### Sensors

TE offers a growing range of sensors for military and aerospace needs. We will work with you to understand the custom requirements of your application. Our goal is to design, manufacture, and deliver superior solutions with uncompromising accuracy, robustness, and reliability.

Electrical Characteristics

**Contact Arrangement** —  
1 Form C (SPDT)

**Contact Material** —  
Stationary —  
Gold/platinum/palladium/silver alloy  
(gold plated)  
Moveable —  
Gold/platinum/palladium/silver alloy  
(gold plated)

**Contact Resistance** —  
Before Life — 100 milliohms max.  
(measured @ 10 mA @ 6 Vdc)  
After Life — 200 milliohms max.  
(measured @ 1 A @ 28 Vdc)

**Mechanical Life Expectancy** —  
1 million operations

**Coil Voltage** — 5 to 26.5 Vdc

**Coil Power** — 512 mW max. @ 25°C

**Duty Cycle** — Continuous

**Pick-up Voltage** — Approximately  
50% of nominal coil voltage

**Pick-up Sensitivity** —  
100 mW max. @ 25°C

Contact Ratings

Contact Load	Type	Operations MINd.
1.0 A @ 28 Vdc	Resistive	100,000
250 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive (case not grounded)	100,000
100 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive	100,000
0.2 A @ 28 Vdc	Inductive (0.32 Henry)	100,000
0.1 A @ 28 Vdc	Lamp	100,000
30 µA @ 50 mVdc	Low Level	1,000,000
0.1 A @ 28 Vdc	Intermediate Current	50,000

1MA/1MAD/1MADD Enclosure

1MA/1MAD/1MADD Header

Single Pole, Electrically Held, 1 Amp and Less (Continued)

1MA, 1MAD, 1MADD

(Continued)

Operating Characteristics

**Timing** —  
Operate Time — 2.0 ms max.  
Release Time —  
1MA — 2.0 ms max.  
1MAD/1MADD — 4.0 ms max.  
(suppression diode, suppression/  
steering diodes)

**Contact Bounce** — 1.5 ms max

**Dielectric Withstanding Voltage** —

Between Open Contacts —  
500 Vrms 60 Hz  
Between Adjacent Contacts —  
500 Vrms 60 Hz  
Between Contacts & Coil —  
500 Vrms 60 Hz

**Insulation Resistance** —

10,000 megohms @ 500 Vdc  
1,000 megohms @ 500 Vdc  
(coil to case @ +125°C)

Environmental Characteristics

**Temperature Range** —  
-65°C to +125°C

**Weight** —  
0.08 oz. (2.27 grms)  
0.09 oz. (2.52 grms) with spreader pad  
attached

**Vibration Resistance** —

30 G's, 10 to 3,000 Hz

**Shock Resistance** —

75 G's, 6 ±1 ms max.

**QPL Approval** —

MIL-R-39016/7 (J1MA)  
MIL-R-39016/23 (J1MAD)  
MIL-R-39016/24 (J1MADD)

Semiconductor Characteristics

**Diode** —  
100 Vdc peak inverse voltage (PIV)  
1.0 Vdc max. transient voltage

Spreader & Mounting Pads

Notes: 1. Coil resistance not directly measurable. Coil current should be within limits shown when tested at nominal voltage at 25°C for 5 seconds max.  
2. Set base current at 3 mA to 15 mA during measurements.

Ordering Instructions

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the relay characteristics in the order in which the codes are listed.

Specifying a Part Number Example*:	Type	Terminal	Diodes	Coils	Spreader/Mounting Pads
	1MA	C	D	-26	S

\* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

**Product Facts**

- Transistor driver & suppression diode
- Hermetically sealed
- High shock & vibration ratings
- Spreader pad
- Excellent RF switching

**Electrical Characteristics**

**Contact Arrangement** — 1 Form C (SPDT)  
**Contact Material** — Stationary — Gold/platinum/palladium/silver alloy (gold plated)  
 Moveable — Gold/platinum/palladium/silver alloy (gold plated)

**Contact Resistance** — Before Life — 100 milliohms max. (measured @ 10 mA @ 6 Vdc)  
 After Life — 200 milliohms max. (measured @ 1 A @ 28 Vdc)

**Mechanical Life Expectancy** — 1 million operations

**Coil Voltage** — 5 to 40 Vdc  
**Coil Power** — 506 mW max. @ 25°C  
**Duty Cycle** — Continuous  
**Pick-up Voltage** — Approximately 50% of nominal coil voltage  
**Pick-up Sensitivity** — 40 mW max. @ 25°C

**Contact Ratings**

1.0 A @ 28 Vdc	Resistive	100,000
250 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive (case not grounded)	100,000
100 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive	100,000
0.2 A @ 28 Vdc	Inductive (0.32 Henry)	100,000
0.1 A @ 28 Vdc	Lamp	100,000
30 µA @ 50 mVdc	Low Level	1,000,000
0.1 A @ 28 Vdc	Intermediate Current	50,000

Operating Characteristics

Timing —

- Operate Time —
- HM/HMD — 4.0 ms max.
- HS/HSD — 6.0 ms max.
- Release Time —
- HM — 3.0 ms max.
- HS — 3.0 ms max.
- HMD — 6.0 ms max.
- (suppression diode)
- HSD — 7.5 ms max.
- (suppression diode)

Dielectric Withstanding Voltage —

- Between Open Contacts —
- 350 Vrms 60 Hz
- Between Adjacent Contacts —
- 350 Vrms 60 Hz
- Between Contacts & Coil —
- 350 Vrms 60 Hz

Insulation Resistance —

1,000 megohms @ 500 Vdc

Environmental Characteristics

Temperature Range —

-55°C to +85°C

Weight —

- HM/HMD —
- 0.09 oz. (2.55 gms)
- 0.099 oz. (2.80 gms) w/ spreader pad
- HS/HSD —
- 0.12 oz. (3.40 gms)
- 0.129 oz. (3.45 gms) w/ spreader pad

Vibration Resistance —

10 G's, 10 to 500 Hz

Shock Resistance —

30 G's, 6 ±1 ms

Semiconductor Characteristics

Diode —

- 100 Vdc peak inverse voltage (PIV)
- 1.0 Vdc max. transient voltage

## Double Pole, Electrically Held, 1 Amp and Less (Continued)

**MAT** (Continued)

**Operating Characteristics**

**Timing** —  
Operate Time — 2.0 ms max.  
Release Time — 7.5 ms max.  
**Contact Bounce** — 1.5 ms max  
**Dielectric Withstanding Voltage** —  
Between Open Contacts —  
500 Vrms 60 Hz  
Between Adjacent Contacts —  
500 Vrms 60 Hz  
Between Contacts & Coil —  
500 Vrms 60 Hz  
**Insulation Resistance** —  
10,000 megohms @ 500 Vdc  
1,000 megohms @ 500 Vdc  
(coil to case @ +125°C)

**Environmental Characteristics**

**Temperature Range** —  
-65°C to +125°C  
**Weight** —  
0.09 oz. (2.55 grms)  
0.10 oz. (2.80 grms) with spreader pad attached  
**Vibration Resistance** —  
30 G's, 10 to 3,000 Hz  
**Shock Resistance** —  
75 G's, 6 ±1 ms max.  
**QPL Approval** —  
MIL-R-28776/1 (JMAT)

**Semiconductor Characteristics**

**Diode** —  
100 Vdc peak inverse voltage (PIV)  
1.0 Vdc max. transient voltage  
**Transistor** —  
0.3 Vdc min. base turn off voltage;  
6.0 Vdc min. emitter-base breakdown voltage (BV<sub>EBO</sub>) @ 25°C;  
80.0 Vdc min. collector-base breakdown voltage (BV<sub>CBO</sub>) @ 25°C & I<sub>C</sub>=100 µA

Spreader & Mounting Pads

**Coil Data**

Nom. Coil Voltage (Vdc)	Coil Resistance in Ohms ±10% @ 25°C (Note 1)	Coil Circuit Current mA (Max.) (Note 1&2)	Coil Circuit Current mA (Min.) (Note 1&2)	Pickup Voltage Vdc (Max.) @ 25°C (Note 2)	Base Turn On Current mA (Max.) @ 25°C	Pickup Voltage Vdc (Max.) @ 125°C (Note 2)	Base Turn On Current mA (Max.) @ 125°C	Drop-Out Voltage Vdc (Min.) @ 25°C (Note 2)	Drop-Out Voltage Vdc (Min.) @ -65°C (Note 2)	Nom. Coil Power (mW) @ 25°C	Max. Coil Voltage	Coil Desig.
MAT												
5.0	50	112.1	82.2	2.7	0.75	3.5	3.00	0.22	0.14	500	5.8	5
6.0	98	69.9	52.9	3.5	0.55	4.5	2.04	0.28	0.18	367	8.0	6

**Notes:** 1. Coil resistance not directly measurable. Coil current should be within limits shown when tested at nominal voltage at 25°C for 5 seconds max.  
2. Set base current at 3 mA to 15 mA during measurements.

**Ordering Instructions**

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the relay characteristics in the order in which the codes are listed.

**Specifying a Part Number Example:**

**Type**      **Terminal**      **Diodes**      **Ground Pins**      **Coils**      **Spreader/Mounting Pads**  
MA            C            T            G            -26            S

\* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

Electrical Characteristics

**Contact Arrangement** — 2 Form C (DPDT)

**Contact Material** — Stationary — Gold/platinum/palladium/silver (gold plated)  
Moveable — Gold/platinum/palladium/silver (gold plated)

**Contact Resistance** — Before Life — 100 milliohms max. (measured @ 10 mA @ 6 Vdc)  
After Life — 200 milliohms max. (measured @ 1 A @ 28 Vdc)

**Mechanical Life Expectancy** — 1 million operations

**Coil Voltage** — 5 to 48 Vdc

**Coil Power** — 565 mW max. @ 25°C

**Duty Cycle** — Continuous

**Pick-up Voltage** — Approximately 50% of nominal coil voltage

**Pick-up Sensitivity** — 130 mW max. @ 25°C

Contact Ratings

Contact Load	Type	Operations Min.
1.0 A @ 28 Vdc	Resistive	100,000
250 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive (case not grounded)	100,000
100 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive	100,000
0.2 A @ 28 Vdc	Inductive (0.32 Henry)	100,000
0.1 A @ 28 Vdc	Lamp	100,000

Double Pole, Electrically Held, 2 Amps and Less (Continued)

Long-life Half size Industrial Relay  
Type 3SCV (2PDT)

Product Facts

- 100,000,000 operations at low-level
- Hermetic seal

The 3SCV is an exceptionally long life relay for low level applications which is designed for industrial applications such as business machines and computer peripheral equipment. The design is such that the phenomenon of sticking contacts is all but eliminated. Because of its low contact resistance and its ability to handle overloads the 3SCV relay is well suited for applications which have previously required reed devices.

Electrical Characteristics

- Contacts** — 2 Form C
- Contact Resistance** — 0.050 ohms; 0.100 ohms after life test
- Life** — 10<sup>5</sup>-2A 28 volts DC, 115 volts AC (not grounded, resistive) 0.5A
- Low-level — 100,000,000 operations — 50 µA at 50 mV Peak AC or DC
- Sensitivity** — 340 mW

Operating Characteristics

- Operate Time** — 6 ms max.
- Release Time** — 4 ms max.
- Contact Bounce** — 2 ms max.
- Enclosure** — All welded, hermetically sealed
- Terminals** — Weldable and solderable
- Dielectric Strength** — 500 volts rms at sea level
- Insulation Resistance** — 1,000 megohm min.

Environmental Characteristics

- Weight** — 0.30 oz.
- Vibration** — 10G, 10-2000 Hz
- Shock** — 50 G 6ms, 1/2 sine
- Temperature** — -14°C to +125°C

See page 1-39 for Mounting Forms, Terminals and Circuit Diagrams.

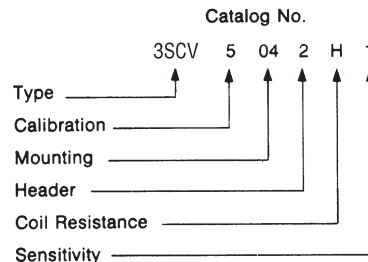

Coil Table (All Values DC)\* 340 mW Sensitivity: (Code 1)

Coil Code Letter	Coil Resistance at 25C (ohms)	Voltage Calibrated, CODE: 5			
		Suggested Source Volts†	Maximum Operate Volts at 25C	Release Voltage Range at 25C	
				Max	Min

K	1030 ± 10%	24.0-35	18.5	12.9	2.0
L	1620 ± 10%	30.0-44	23.1	16.2	2.5
M	2640 ± 10%	39.0-56	29.5	20.68	3.2

Ordering Instructions

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed.

**Example:** The relay selected in this example is a 2PDT half size relay, voltage calibrated, two-hole side bracket mounting, solder hook header, 700 ohms coil resistance, and 340 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is identified as 3SCV5042H1. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SCV5042H1R.

Double Pole, Electrically Held, 2 Amps and Less (Continued)

Mounting Forms (3SCV)

No Mount

Mounting Code
00

**Electrical Characteristics**

**Contact Arrangement** — 2 Form C (DPDT)  
**Contact Material** — Stationary — Bifurcated hardened silver alloy  
 Moveable — Gold plated hardened alloy  
**Contact Resistance** — Before Life — 50 milliohms max. (measured at 10 mA @ 6 Vdc)  
 After Life — 100 milliohms max. (measured @ 2 A @ 28 Vdc)  
**Mechanical Life Expectancy** — 10 million operations  
**Coil Voltage** — 5 to 26.5 Vdc  
**Coil Power** — 1.4 watts max. @ 25°C  
**Duty Cycle** — Continuous

**Pick-up Voltage** — Approximately 60% of nominal coil voltage

**Pick-up Sensitivity** — 360 mW

**Operating Characteristics**

**Timing** — Operate Time — 6.0 ms max.  
 Release Time — 6.0 ms max.

**Dielectric Withstanding Voltage**

— Between Open Contacts — 350 Vrms 60 Hz  
 Between Adjacent Contacts — 500 Vrms 60 Hz  
 Between Contacts and Coil — 500 Vrms 60 Hz

**Insulation Resistance** — 1,000 megohms min @ 500 Vdc

**Environmental Characteristics**

**Temperature Range** — -55°C to +85°C

**Weight** — 0.46 oz. (13 gms) max.

**Vibration Resistance** — 10 G's, 10 to 500 Hz

**Shock Resistance** — 30 G's, 6 ±1 ms

**Product Facts**

- Hermetically sealed
- Up to 2 amps switching
- Economical configuration
- Optional terminals & mounting styles

**Ordering Instructions**

Catalog-selected Relays: The catalog number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed.

**Specifying a Part Number Example:**

Type	Terminals	Mountings	Coils	Features
HFC	12	30	K	00

**Double Pole, Electrically Held, 2 Amps and Less** (Continued)

**.150 Grid-space Relays**  
**Type 3SBC (2PDT) Standard**  
**135 mW 2PDT**  
**50 mW (Form AB)**  
**1 PNC-1 PNO**

**Product Facts**

- **Low profile... only 0.32 inches high**
- **Internal diode for coil transient suppression and transistor driven models available**
- **Qualified to MIL-R-39016/13**
- **RF designs available**

The .150 Grid-space relay — only 0.32 inches high — saves space in electronic packaging. The pin spacing allows you to insert the relay with no intermediate pin spreaders as well as meet applicable military specifications.

**Electrical Characteristics**

**Contact Ratings —**  
 DC resistive — 2 amps at 28 volts (50,000 operations)  
 1 Amp @ 28 V (100,000 operations)  
 DC inductive — 0.5 amps at 28 volts, 200 mH  
 AC resistive — 0.5 amps at 115 volts  
 AC — 0.125 amps at 115 volts (case grounded)  
 Low-level — 50 µA at 50 mV  
 Peak AC or DC

**Contact Resistance —**  
 0.050 ohms max.; 0.150 ohms after life test

**Life —** 100,000 operations at rated loads listed; 1,000,000 operations at low-level loads

**Operating Characteristics**

**Operate Time —** 4 ms max.  
**Release Time —** 4 ms max.  
**Contact Bounce —** 1.5 ms  
**Dielectric Strength —**  
 500 volts rms at sea level;  
 350 volts rms at 70,000 feet and above  
**Insulation Resistance —** 1,000 megohm min. over temperature range

**Environmental Characteristics**

**Vibration —** 30G, to 3000 Hz  
**Shock —** 100 G at 11 ms  
**Temperature —** -65°C to +125°C

See page 1-44 for Mounting Forms, Terminals and Circuit Diagrams.

Ordering Instructions

**Example:** The relay selected in the example is a FORM AB .150-grid relay, current calibrated, end bracket mounting with 0.13-inch solder hook header, 210 ohms coil resistance, and 50 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is 3SBC6131E2. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SBC6131E2R.

**Note:** Relays specified by catalog numbers (per above directions) are general use items controlled by catalog specifications. Relays to be controlled by customer drawings — or relays having requirements not covered in this publication — will be assigned special catalog numbers upon request.

\* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

**.150 Grid-space  
Long-life Relays  
Type 3SCC (2PDT)  
170 mW**

**Product Facts**

- 100,000,000 operations low-level signal loads
- RF designs available
- Low profile — 0.32 height
- Hermetic seal
- High reliability
- Performance tested

The .150 Grid relay, the smallest (.320 inches high) 2 Amp rated relay available in commercial and military qualified models, is now available in the long life version. Capable of over 100,000,000 mechanical operations at low level and signal load, the .150 Grid relay provides the simplicity of relays for circuit design, the low circuit resistance of precious metal contact systems, and the long life processing that has made CII relays the standard for quality and reliability.

**Electrical Characteristics**

**Contact Ratings —**  
 DC resistive — 2 amps at 28 volts (50,000 operations)  
 1 Amp @ 28 V (100,000 operations)  
 DC inductive — 0.5 amps at 28 volts, 200 mH  
 AC resistive — 0.5 amps at 115 volts  
 AC — 0.125 amps at 115 volts (case grounded)  
 Low-level — 50  $\mu$ A at 50 mV Peak AC or DC

**Contact Resistance —**  
 0.050 ohms max.; 0.150 ohms after life test

**Life —** 100,000 operations at rated loads listed; 1,000,000 operations at low-level loads

**Operating Characteristics**

**Operate Time —** 4 ms max.  
**Release Time —** 4 ms max.  
**Contact Bounce —** 1.5 ms  
**Dielectric Strength —**  
 500 volts rms at sea level;  
 350 volts rms at 70,000 feet and above  
**Insulation Resistance —** 1,000 megohm min. over temperature range

**Environmental Characteristics**

**Vibration —** 30G, to 3000 Hz  
**Shock —** 100 G at 11 ms  
**Temperature —** -40°C to +125°C

See page 1-44 for Mounting Forms, Terminals and Circuit Diagrams.

Crystal-Can Relays  
Type 3SAE (2PDT)

Product Facts

- Small lightweight crystal-can type
- 0.25 cubic inch, 0.60 ounces
- Power or low-level switching
- 20G to 2000 Hz vibration capability

The TE Connectivity line of crystal-can relays is backed by years of experience and millions of relays operating in the field.

Electrical Characteristics

**Contact Ratings** —  
 DC resistive — 2 amps at 28 volts  
 DC inductive — 1 amp at 28 volts, L/R < .025  
 Low-level — 50  $\mu$ A at 50 mV  
 Peak AC or DC  
 AC resistive — 1.0 amp at 115 volts, case not grounded  
 AC resistive — 0.25 amps at 115 volts, case grounded  
**Coil Resistance** —  
 0.050 ohms max. initial;  
 0.100 ohms max. after life test  
**Life** — 100,000 operations at rated load; 1,000,000 at low-level

Operating Characteristics

**Operate Time** — 6 ms max.  
**Release Time** — 5 ms max.  
**Contact Bounce** — 2.5 ms  
**Dielectric Strength** —  
 1,000 volts rms at sea level;  
 700 volts rms across contact gaps;  
 350 volts rms at 70,000 feet  
**Insulation Resistance** —  
 1,000 megohm min. except coil to case 500 min. at 125°C  
**Environmental Characteristics**  
**Vibration** — Depends upon mounting forms  
**Shock** — 50 G at 11 ms  
**Temperature** — -65°C to +125°C  
 See page 1-46 for Mounting Forms, Terminals and Circuit Diagrams.

DESIGNED to MIL-R-39016/45

Terminal View

**Standard Schematic** Contacts will switch from the indicated position when either coil is energized with polarity as shown.

**MIL-R-39016/45 SCHEMATIC** Contacts will switch from the indicated position when either coil is energized with polarity as shown.

Product Facts

- Hermetically sealed
- Up to 2 amps switching
- High shock & vibration ratings
- Optional terminals & mounting styles
- Latching design

Electrical Characteristics

**Contact Arrangement** — 2 Form C (DPDT)

**Contact Material** —

Stationary — Gold plated hardened silver alloy

Moveable — Gold plated hardened silver alloy

**Contact Resistance** —

Before Life — 50 milliohms max.

(measured at 10 mA @ 6 Vdc)

After Life — 100 milliohms max.

(measured @ 2 A @ 28 Vdc)

**Mechanical Life Expectancy** — 1 million operations min.

**Coil Voltage** — 5 to 48 Vdc

**Coil Power** — 1.0 watts max.

**Duty Cycle** — Continuous

**Pick-up Voltage** — Approximately 50% of nominal coil voltage

**Pick-up Sensitivity** — 170 mW

Contact Ratings

Contact Load	Type	Operations Min.
2 A @ 28 Vdc	Resistive	100,000
0.3 A @ 115 Vac, 60 Hz & 400 Hz	Resistive	100,000
0.75 A @ 28 Vdc	Inductive (200mH)	100,000
0.1 A @ 28 Vdc	Intermediate	50,000
0.160 A @ 28 Vdc	Lamp	100,000
30 $\mu$ A @ 50 mVdc	Low Level	1,000,000

RF Performance

Frequency (MHz)	RF Losses (dB)	VSWR	Isolation (dB)
100	0.1	1.15:1	38
500	0.3	1.19:1	31
1000	0.6	1.32:1	45

**Double Pole, Magnetic Latching, 2 Amps and Less** (Continued)

**Magnetic Latching,  
Grid Space, Relay  
Type 3SDM (2PDT)**

**Product Facts**

- Suitable for pulse operation
- No hang up feature
- MIL-R-39016 type
- Special contact and coil wiring available

This magnetic latching relay maintains the high reliability attributes of the aerospace proven CII 3SAM relay family. By reducing the size of the coil and maintaining the contact system of the 3SAM, we can now offer a smaller 2 amp rated magnetic latching relay. The pulse operation can provide multiple hundred thousand operations in power saving circuits. The on or off

circuits are maintained using no power until there is a need to switch the contacts. Suitable for matrix switches or relay trees, these versatile relays have contact systems capable of reliability switching high power or very low level signals in the same package. The relay's unique circuit prevents it from ever hanging up in an off-center or neutral position.

**Electrical Characteristics**

**Contact Ratings** —  
DC resistive — 2 amps at 28 volts  
Low-level — 50  $\mu$ A at 50 mV DC or peak AC

**Contact Resistance** —  
0.050 ohms initial;  
0.100 ohms after life test (High level)  
0.150 ohms after life test (Low level)

**Life** —  
100,000 operations at rated load;  
1,000,000 operations at low-level

**Operating Characteristics**

**Operate Time** — 4 ms

**Reset Time** — 4 ms

**Contact Bounce** — 2 ms

**Dielectric Strength** —  
1,000 volts at sea level;  
500 volts across contact gap and  
500 volts coil to case

**Insulation Resistance** —  
1,000 megohms min.

**Environmental Characteristics**

**Vibration** —  
Sine — 30G; 55 to 3000 Hz  
Random — 0.4 G<sup>2</sup>/Hz; 100 to 1,000 Hz

**Shock** — 150 G at 11 ms, half-sine wave

**Temperature** — -65°C to +125°C

Ordering Instructions

Type 3SDM relays can be ordered by specifying the correct catalog number. This number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed in the example. The letter R following the sensitivity code indicates relay received 5,000 operations miss-test.

**Example:** The relay selected is a 2PDT magnetic-latching relay, voltage calibrated, 2-hole end bracket mount, solder hook header, 500 ohm coil, and 290 mW sensitivity. **3SDM5132H1**

Relay Characteristic Catalog Number

Double Pole, Magnetic Latching, 2 Amps and Less (Continued)

Magnetic Latching, Grid-space, Relays Type 3SAM (2PDT)

Product Facts

- Special shock designs up to 700 G, 1 ms
- Suitable for pulse operation
- No hang up feature on low power pulses
- Qualified to MIL-R-39016/32
- Special wiring is available

This relay has “memory” in that the contact positions do not change when coil power is removed. Switching is accomplished by applying power to the applicable coil (dual coil) or with the applicable polarity (single coil). The low switching power requirements are further enhanced by its ability to operate from capacitor discharge or other pulses or through its own contacts for batteries or similarly limited supplies.

Electrical Characteristics

**Contact Ratings** —  
 DC resistive — 2 amps at 28 volts  
 DC inductive — 0.5 amps at 28 volts, 200 mH  
 AC resistive — 1 amp at 115 volts (single coil), case not grounded  
 AC resistive — 0.25 amps at 115 volts (dual coil), case not grounded  
 Low-level — 50  $\mu$ A at 50 mV  
 Peak AC or DC

**Contact Resistance** —  
 0.050 ohms initial;  
 0.100 ohms after life test

**Life** —  
 100,000 operations at rated load;  
 1,000,000 at low-level

Operating Characteristics

**Operate Time** — 4 ms  
**Release Time** — 4 ms  
**Contact Bounce** — 2 ms  
**Dielectric Strength** —  
 1,000 volts rms at sea level;  
 700 volts rms across contact gap  
**Insulation Resistance** —  
 1,000 megohm min.

Environmental Characteristics

**Vibration** — 30 G, to 3,000 Hz  
**Shock** — 150 G at 11 ms  
**Temperature** — -65°C to +125°C

See page 1-52 for Mounting Forms, Terminals and Circuit Diagrams.

Four Pole, Electrically Held, 2 Amps and Less (Continued)

.150 Grid-space Relays  
Type 3SBH (4PDT)

Product Facts

- Low profile... only 0.32 inches high
- Long life version available
- Qualified to MIL-R-39016/14

This .150 four pole double throw Grid-space relay is the companion to the two pole 3SBC type shown on page 1-41. It also features the same .150 inch pin spacing that allows you to insert the relay with no intermediate pin spreaders. There is adequate clearance for conductors to reach all pins. It is a very compact 4 pole double throw 2 ampere relay.

Electrical Characteristics

**Contact Ratings** —  
DC resistive — 2 amps at 28 volts  
DC inductive — 0.5 amps at 28 volts, 200 mH  
AC resistive — 0.5 amps at 115 volts, 400 or 60 Hz (enclosure isolated from ground, or enclosure and movable contact at same potential)  
AC — 0.125 amps at 115 volts (enclosure at line potential with respect to movable contact)  
Low-level — low-level operation at 50 millivolts, 30  $\mu$ A, 33 ohm miss level

**Contact Resistance** —

0.050 ohms max.;  
0.150 ohms after life test

**Life** —

100,000 operations at rated loads listed;  
1,000,000 operations at low-level loads

Operating Characteristics

**Operate Time** — 4 ms max.

**Release Time** — 4 ms max.

**Contact Bounce** — 1.5 ms

**Dielectric Strength** —  
500 volts rms at sea level;  
350 volts rms at 70,000 feet

**Insulation Resistance** —  
1,000 megohms min. over temperature range

Environmental Characteristics

**Vibration** — 30 G, to 3,000 Hz

**Shock** — 100 G at 11 ms

**Temperature** — -65°C to +125°C

See page 1-57 for Mounting Forms, Terminals and Circuit Diagrams.

†Applicable over the operating temperature range in circulating air.

Ordering Instructions

**Catalog-selected Relays:** The catalog number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed.

**Example:** The relay selected in this example is a 4PDT .150-grid relay, voltage calibrated, end bracket mounting, 0.13 inch solder hook header, 720 ohms coil resistance, and 250 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is identified as 3SBH5131K1. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SBH5131K1R.

\* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

Four Pole, Electrically Held, 2 Amps and Less (Continued)

.150 Grid-space Hybrid Relays  
Type 3SBH (4PDT)

Product Facts

- Low profile... only 0.32 inches high
- Long life version available
- Qualified to MIL-R-39016/53 & 54

The 4PDT .150 Grid-space hybrid relays are advanced designs of the standard high reliability 4PDT .150 Grid-space relays. In the single diode version, the relay coil-back electromotive force is suppressed to prevent circuit/component damage. With the dual diode version, a steering diode is added to the coil circuit, along with the suppression diode. This

steering diode prevents operation of the relay by reverse polarity voltages and protects the suppression diode. The single diode version is qualified to MIL-R-39016/53 and the dual diode is qualified to MIL-R-39016/54.

Electrical Characteristics

**Contact Ratings** —  
DC resistive — 2 amps at 28 volts  
DC inductive — 0.5 amps at 28 volts, 200 mH  
AC resistive — 0.5 amps at 115 volts, 400 or 60 Hz (enclosure isolated from ground, or enclosure and movable contact at same potential)  
AC — 0.125 amps at 115 volts (enclosure at line potential with respect to movable contact)  
Low-level — 50  $\mu$ A at 50mV  
**Contact Resistance** —  
0.050 ohms max.;  
0.150 ohms after life test  
**Life** — 100,000 operations at rated loads listed; 1,000,000 operations at low-level loads

Operating Characteristics

**Operate Time** — 4 ms max.  
**Release Time** — 6 ms max.  
**Contact Bounce** — 2.0 ms  
**Dielectric Strength (Note 1)** —  
500 volts rms at sea level;  
350 volts rms at 70,000 feet  
**Insulation Resistance (Note 1)** —  
1,000 megohms min. over temperature range

Semiconductor Characteristics at 25°C

**Max. Negative Transient** — 1 volt  
**Breakdown Voltage** —  
100 Vdc @ 10  $\mu$ A min.  
**Max. Leakage Current** —  
1  $\mu$ A @ 50 Vdc

**Note 1:** Tests for dielectric withstanding voltage and insulation resistance should be made with "coil terminals" shorted together to avoid unnecessary electrical stress to semiconductor elements.

See page 1-57 for Mounting Forms, Terminals and Circuit Diagrams.

**Ordering Instructions**

**Catalog-selected Relays:** The catalog number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed.

**Example:** The relay selected in this example is a 4PDT .150-grid relay, voltage calibrated, end bracket mounting, 0.13 inch solder hook header, 720 ohms coil resistance, and 250 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is identified as 3SBH5131K5. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SBH5131K5R.

\* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

**Four Pole, Electrically Held, 2 Amps and Less** (Continued)

**Long-life .150 Grid-space Relays**  
**100,000,000 Operations At Low Levels**  
**Type 3SDH (4PDT)**

**Product Facts**

- Long life at low level or signal loads
- Low profile... only 0.32 inches high

The 3SDH relay is designed for 100,000,000 operations at low levels. It is a four pole double throw Grid-space relay. The 0.150 inch pin spacing allows the user to insert the relay with no intermediate pin spreaders. There is adequate clearance for conductor to reach all pins.

**Electrical Characteristics**

**Contact Ratings** —  
 DC resistive — 2 amps at 28 volts, (DC 100,000 operations)  
 DC inductive — 0.3 amp at 28 volts, (L/R not greater than 0.008)  
 AC resistive — 0.5 amp at 115 volts, 400 or 60 Hz (enclosure isolated from ground, or enclosure and movable contact at same potential)  
 AC resistive — 0.125 amp at 115 volts (enclosure at line potential with respect to movable contact)  
 Low-level — 50  $\mu$ A at 50 mV  
 Peak AC or DC

**Contact Resistance** —  
 0.050 ohms max.;  
 0.150 ohms after life test

**Life** — 100,000 operations at rated loads listed; 100,000,000 operations at low-level loads

**Operating Characteristics**

**Operate Time @ +25°C** —  
 4 ms max.

**Release Time @ +25°C** —  
 4 ms max.

**Contact Bounce @ +25°C** — 1.5 ms

**Dielectric Strength** —  
 500 volts rms at sea level;  
 350 volts rms at 70,000 feet

**Insulation Resistance** —  
 1,000 megohms min. over temperature range

**Environmental Characteristics**

**Vibration** — 30 G, to 3,000 Hz

**Shock** — 100 G at 11 ms

**Temperature** — -40°C to +125°C

## Four Pole, Magnetic Latching, 2 Amps and Less

### .150 Grid-space Magnetic Latching Relays Type 3SBM (4PDT)

#### Product Facts

- Low profile... only 0.32 inches high
- Internal diode for coil transient suppression available
- Qualified to MIL-R-39016/31
- Suitable for low pulse operation — 2 ms at rated voltage

The Type 3SBM relay adds magnetic latching capability to the popular and growing family of .150-grid relays. This relay has memory in that the contact positions do not change when coil power is removed. Switching is accomplished by applying power to the applicable coil (dual coil) or with the applicable polarity (single coil). The low switching power requirements are further enhanced by its ability to operate from capacitor discharge or other pulses or through its own contacts from batteries or similarly limited supplies.

#### Electrical Characteristics

**Operate Sensitivity**—  
Single-coil form, 100 mW,  
Dual-coil form, 180 mW

**Contact Arrangement**—  
4-pole double-throw (4C)

**Contact Ratings** —  
DC resistive — 2 amps at 28 volts  
DC inductive — 0.5 amp at 28 volts,  
200 mH  
AC resistive — 0.5 amp at 115 volts  
(enclosure isolated from ground, or  
enclosure and movable contact at same  
potential)  
AC — 0.125 amp at 115 volts  
(enclosure at line potential with respect  
to movable contact)  
Low-level — 50 µA at 50 mV  
Peak AC or DC

**Contact Resistance** —  
0.050 ohms max.;  
0.150 ohms after life tests

**Life** —  
100,000 operations at rated loads listed;  
1,000,000 operations at low-level loads

#### Operating Characteristics

**Operate Time** — 4 ms max.  
**Release Time** — 4 ms max.  
**Contact Bounce** — 1.5 ms  
**Dielectric Strength** —  
500 volts rms at sea level;  
350 volts rms at 70,000 feet and above  
**Insulation Resistance** —  
1,000 megohms min. over temperature  
range

**Environmental Characteristics**  
**Vibration** — 30 G, 55 to 3,000 Hz  
**Shock** — 150 G at 11 ms  
**Temperature** — -65°C to +125°C

See page 1-62 for Mounting Forms,  
Terminals and Circuit Diagrams.

\*Values listed are factory test and inspection values. User should allow for meter variations.  
†Applicable over the operating temperature range in circulating air.

#### Ordering Instructions

Type 3SBM relays can be ordered by specifying the correct catalog number. This number is derived by choosing the proper CODE for each of the six relay characteristics in the order in which the codes are listed.

**Example:** The relay selected in this example is a dual coil, current calibrated, four-hole end bracket mounting, solder hook header, 37 ohms coil resistance, and 180 mW sensitivity. By choosing the proper code for each of these relay characteristics, the catalog number is identified as 3SBM6131N2. The letter R following sensitivity code indicates relay received 5000 operation miss-test. Ex. 3SBM6131N2R.

\* The part number example shown on this page is for catalog items. For a list of specific QPL part numbers, please see the index in Section 15.

Four Pole, Magnetic Latching, 2 Amps and Less (Continued)

.150 Grid-space Hybrid Magnetic Latching Relays Single Diode, Dual Diode Type 3SBM (4PDT)

Product Facts

- Low profile... only 0.32 inches high
- Suitable for pulse operation
- Qualified to MIL-R-39016/35
- Qualified to MIL-R-39016/36

The dual coil version of the 3SBM magnetic latching relay is now available with coil transient suppression with or without blocking diodes for reverse polarity protection. This hybrid magnetic latching relay is an addition to the growing family of .150 grid relays. The diode method is employed to limit the back EMF generated when the coil circuit is opened in order to protect other circuit components such as semiconductors. The contact load

capabilities of the 3SBM as well as the memory feature of the latching function are both maintained.

Electrical Characteristics

**Contact Arrangement**— 4-pole double-throw (4C)

**Operate Sensitivity**— Single-coil form, 100 mW, Dual-coil form, 180 mW per coil

**Contact Ratings**— DC resistive — 2 amps at 28 volts DC inductive — 0.5 amp at 28 volts, 200 mH

AC resistive — 0.5 amp at 115 volts (enclosure isolated from ground, or enclosure and movable contact at same potential)

AC — 0.125 amp at 115 volts (enclosure at line potential with respect to movable contact)

Low-level — 50  $\mu$ A at 50 mV Peak AC or DC

**Contact Resistance** — 0.050 ohms max.; 0.150 ohms after life test

**Life** — 100,000 operations at rated loads listed; 1,000,000 operations at low-level loads

Operating Characteristics

**Operate Time** — 4 ms max.

**Release Time** — 4 ms max.

**Contact Bounce** — 1.5 ms

**Dielectric Strength (Note 1)** —

500 volts rms at sea level;

350 volts rms at 70,000 feet and above

**Insulation Resistance (Note 1)** — 1,000 megohms min. over temperature range

Environmental Characteristics

**Vibration** — 30 G, 55 to 3,000 Hz

**Shock** — 150 G at 11 ms

**Temperature** — -65°C to +125°C

Semiconductor Characteristics at 25°C

**Max. Negative Transient** — 1 volt

**Breakdown Voltage** — 100 Vdc min.

**Max. Leakage Current** — 1  $\mu$ A @ 50 Vdc

**Note 1:** Tests for dielectric withstanding voltage and insulation resistance should be made with "coil terminals" shorted together to avoid unnecessary electrical stress to semiconductor elements.

See page 1-62 for Mounting Forms, Terminals and Circuit Diagrams.

Header and Connection Diagrams

Dual Coil

When the SET coil is pulsed with plus polarity on the blue bead, the movable contacts take the position shown in the connection diagram. The contacts are transferred when the RESET coil is pulsed with plus polarity on the reset terminal. A new pulse of the SET coil with plus polarity on the blue bead will transfer the contacts back.

The contacts can also be transferred by applying a pulse of opposite polarity to the coil previously pulsed. However, this method requires slightly more power than the more normal form of operation described in the previous paragraph.

**Contact Material** — Stationary — Bifurcated hardened silver alloy  
 Moveable — Gold plated hardened alloy  
**Contact Resistance** — Before Life — 50 milliohms max. (measured at 10 mA @ 6 Vdc)  
 After Life — 100 milliohms max. (measured @ 2 A @ 28 Vdc)  
**Mechanical Life Expectancy** — 10 million operations  
**Coil Voltage** — 5 to 26.5 Vdc  
**Coil Power** — 1.4 watts max. @ 25°C

**Duty Cycle** — Continuous

**Pick-up Voltage** — Approximately 60% of nominal coil voltage

**Pick-up Sensitivity** — 360 mW

**Operating Characteristics**

**Timing** — Operate Time — 6.0 ms max.

Release Time — 6.0 ms max.

**Dielectric Withstanding Voltage**

— Between Open Contacts — 350 Vrms 60 Hz

Between Adjacent Contacts — 500 Vrms 60 Hz

Between Contacts and Coil — 500 Vrms 60 Hz

**Insulation Resistance** — 1,000 megohms min @ 500 Vdc

**Environmental Characteristics**

**Temperature Range** — -55°C to +85°C

**Weight** — 0.46 oz. (13 gms) max.

**Vibration Resistance** — 10 G's, 10 to 500 Hz

**Shock Resistance** — 30 G's, 6 ±1 ms

### Double Pole, Electrically Held, 1 Amp and Less

#### MW3 / MW4 / MW6 / MW3HP / MW4HP / MW6HP Series Relays

Microwave Switching,  
Hermetically Sealed, DPDT

#### Product Facts

- Excellent signal isolation, stable insertion loss and low VSWR
- Provide repeatable RF performance at frequencies up to the 3 GHz. level (MW3/MW3HP), 4 GHz. level (MW4/MW4HP) & 6 GHz. level (MW6/MW6HP)
- Standard versions for applications ranging from wireless communications to precision high-speed test equipment
- High performance (HP) versions for use under more demanding environmental conditions
- Standard or sensitive (S) coils are offered in a range of DC input voltages
- 2 Form C (DPDT) contacts rated low-level to 1 amp
- Extended mechanical life expectancy of 10 million operations
- Robust, hermetically sealed enclosure

These CII relays provide microwave frequency switching in a hermetically sealed, subminiature package.

Both standard and high performance models are offered in 3 GHz., 4 GHz. and 6 GHz. types.

Standard models (MW3, MW4 and MW6) perform in temperature ranges from -55°C to +85°C and withstand 10G vibration and 30G shock.

High performance models (MW3HP, MW4HP and MW6HP) offer extended temperature ratings of -65°C to +125°C while providing 30G's vibration and 100G's shock (75G's for MW3) environmental ratings.

All are available with either standard or sensitive DC coils. Nominal coil power is 367-500mW (model dependent) for standard coils and 169-250mW for sensitive coils.

Signal isolation is 18dB at 6 GHz. (MW6/MW6HP), 18dB at 4 GHz. (MW4/MW4HP), and 22dB at 3 GHz. (MW3/MW3HP).

Insertion loss is 0.38dB for MW6/MW6HP, 0.27dB for MW4/MW4HP, and 0.36dB for MW3/MW3HP.

VSWR is a low 1.30:1 @ 6GHz. for MW6/MW6HP, 1.36:1 @ 4GHz. for MW4/MW4HP, and 1.24:1 @ 3GHz. for MW3/MW3HP.

Contacts and Coil —  
MW3 types — 350 Vrms, 60 Hz.  
MW3HP types — 500 Vrms, 60 Hz.

**Insulation Resistance** —  
1,000 megohms @ 500 VDC

#### Environmental Characteristics

**Temperature Range** —  
MW3 types — -55°C to +85°C.  
MW3HP types — -65°C to +125°C.

**Weight** —  
MW3, MW3HP: 0.09 oz. (2.55 g)  
MW3S, MW3HPS: 0.12 oz. (3.40 g).

**Vibration Resistance** —  
MW3 types — 10 G's, 10-500 Hz.  
MW3HP types — 30 G's, 10-3,000 Hz

**Shock Resistance** —  
MW3 types — 30 G's, 6 ± 1 ms.  
MW3HP types — 75 G's, 6 ± 1 ms.

#### Contact Ratings

Contact Load	Type	Operations Min.
1.0A @ 28VDC	Resistive	100,000
200mA @ 28VDC (300mH)*	Inductive	100,000
30µA @ 50mVDC	Low Level	10,000,000

\* The inductive rating is only applicable to high performance models (MW3HP and MW3HPS).

#### Coil Data

MW3 Models							
Nominal Coil Voltage (VDC)	Coil Resistance In Ohms ±20% @ 25°C	Pickup Voltage VDC (Max.) @ 25°C	Nominal Coil Power (mW) @ 25°C	Maximum Coil Voltage	Coil Desig.

CII High Frequency, Low Signal Relays

## Double Pole, Electrically Held, 1 Amp and Less (Continued)

### Microwave Switching, Hermetically Sealed, DPDT

### MW3 & MW3HP Models, 3 GHz. Switching (Continued)

Insertion Loss & VSWR: NO Contacts

Insertion Loss & VSWR: NC Contacts

Isolation

#### Test Conditions

**Test Board** — 0.031" double sided copper clad, PTFE based laminate.

**Connections** — Relay header is soldered to ground plane. Relay terminals are soldered to through holes. SMA connectors are soldered to circuit traces.

**Temperature** — Room ambient.

**Signal Strength** — 0 dBm.

#### Notes:

- Unused terminals were terminated with 50 ohm impedance load.
- All readings are typical.

#### Enclosures

#### Header

For other ground pin configurations consult factory.

**Header and Terminal Finish:**  
 Nickel plated on MW3 & MW3S.  
 Tin-lead plated on MW3HP & MW3HPS.

#### Part Numbering System

Typical Part Number	MW3	S	5	A	G
<b>Series:</b>	MW3 = 3 GHz. switching relay MW3HP = High performance 3 GHz. switching relay				
<b>Coil Sensitivity:</b>	Leave Blank = Standard Coil    S = Sensitive Coil				
<b>Coil Designator:</b>	5 = 5VDC    6 = 6VDC†    9 = 9VDC† 12 = 12VDC    18 = 18VDC    26 = 26.5VDC † 6 and 9 volt coil only available on high performance models.				
<b>Terminal Length:</b>	A = 0.750 in (19.05 mm)    P = 0.187 ± 0.010 in (4.75 ± 0.25 mm)				
<b>Ground Pin Position (see header drawings above):</b>	G = Opposite locating tab    E = Near locating tab. Consult factory for other ground pin configurations.

Coil current should be within limits shown when tested at nominal voltage at 25°C for 5 seconds maximum.

### HOW TO SPECIFY A PART NUMBER

For our standard catalog High Performance products, the Part Number begins with the series designator shown below.

Specifying a Part Number Example:	<b>Series</b>	<b>Terminals</b>	<b>Diodes</b>	<b>Ground Pins</b>	<b>Coils</b>	<b>Spreader/ Mounting Pads</b>
	MAV	C	D	G	-26	S

### Electrical Characteristics

**Contact Arrangement** —  
2 Form C (DPDT)

**Contact Material** —  
Stationary —  
Gold/platinum/palladium/silver alloy  
(Gold plated)  
Moveable — Gold/platinum/palladium/  
silver alloy (Gold plated)

**Contact Resistance** —  
Before Life — 100 milliohms max.  
(measured @ 10 mA @ 6 Vdc)  
After Life — 200 milliohms max.  
(measured @ 1 A @ 28 Vdc)

**Mechanical Life Expectancy** —  
1 million operations

**Coil Voltage** — 5 to 26.5 Vdc

**Coil Power** — 370 mW max. @ 25°C

**Duty Cycle** — Continuous

**Pick-up Voltage** — Approximately  
70% of Nominal Coil Voltage

**Pick-up Sensitivity** — 155 mW max.  
@ 25°C

### Contact Ratings

Contact Load	Type	Operations Min.
1.0 A @ 28 Vdc	Resistive	100,000
250 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive (Case not grounded)	100,000
100 mA @ 115 Vac, 60 Hz & 400 Hz	Resistive	100,000
0.2 A @ 28 Vdc	Inductive (0.32 Henry)	100,000
0.1A @ 28 Vdc	Lamp	100,000
30 µA @ 50 mVdc	Low Level	1,000,000
0.1 A @ 28 Vdc	Intermediate Current	50,000

#### Operating Characteristics

**Operate Time** — 4.0 ms max.

**Release Time** —

MSV — 2.0 ms max.

MSVD — 7.5 ms max.

(suppression diode)

**Contact Bounce** — 1.5 ms max.

**Dielectric Withstanding Voltage** —

Between Open Contacts —

500 Vrms 60 Hz

Between Adjacent Contacts —

500 Vrms 60 Hz

Between Contacts and Coil —

500 Vrms 60 Hz

**Insulation Resistance** —

10,000 megohms min. @ 500 Vdc

1,000 megohms @ 500 Vdc (coil to case at +125°C)

#### Environmental Characteristics

**Temperature Range** —

-65°C to +125°C

**Weight** —

0.09 oz. (2.55 grms)

0.10 oz. (2.80 grms) with spreader pad attached

**Vibration Resistance** —

100 G's, 10 - 2,000 Hz

250 G's, 140 +/- 5 Hz

350 G's, 170 +/- 5 Hz

380 G's, 200 +/- 5 Hz

**Shock Resistance** —

150 G's, 11 ± 1ms max.

#### Semiconductor Characteristics

**Diode** —

100 Vdc peak inverse voltage (PIV)

1.0 Vdc max. transient voltage

CII High Reliability Space Relays ..... 4-2, 4-3  
KILOVAC Space Relays ..... 4-4

### CII High Reliability Space Relays

#### Product Testing

TE's CII High Reliability Space Relay products begin as relays manufactured to MIL-Spec requirements. They then receive additional processing and testing to particular customer specifications.

All operations and processes are documented as required by MIL-STD-790. Each operation and process has an accompanying route sheet that allows tracking of all materials and processes associated with an order. For those who require additional information, we can serialize, track and document the data for individual relays.

In addition to quality audits throughout the manufacturing process,

our High Reliability Space relays are extensively tested to assure that your High Reliability standards and requirements are met or exceeded.

Our High Reliability Space Relay products are tested 100% for Group A parameters and then subjected to additional testing including: PIND, Small Particle Cleaning, Random, Vibration, and X-Ray. Group B and C testing is done for lot integrity based on MIL-R-39016. These test profiles are tailored to your individual requirements.

Destructive testing is often performed, based on the actual application of the device. On a "standard" QPL relay, this testing is performed periodically, and performance is assumed for the period of manufacture. In the High Reliability Space

Relay, this performance is proven for each relay lot based on the testing and documentation of each serialized relay.

#### Clean Room

All of our High Reliability Space Relay products are manufactured in a temperature and humidity controlled environment utilizing a clean room area for sub-assemblies. All final assembly, intermediate testing, small particle cleaning, pre-cap inspection, and sealing is

performed in an integrated, Class 1000 clean room that is temperature and humidity controlled in accordance with Federal Standard 209E. Temperature, humidity and air particle counts are monitored for precise control to ensure the integrity of the internal relay environment.

## CII High Reliability Space Relays (Continued)

### Products

#### ■ Half Size Non-Latching

Available in 2, 4 and 6 Form C configurations, low level to 5 amp switching.

#### ■ Half Size Latching

Available in 2 and 4 Form C configurations, low level to 2 amp switching.

#### ■ One Fifth Non-Latching

2 Form C, low level 2 amp switching.

#### ■ TO-5/.100 Grid

Available in 2 Form C, round and square outlines, low level to 1 amp switching, military qualified, optional spreader and mounting pads, ground pins, internal diodes, transistors, and hybrid assemblies.

### Services

Our engineering staff, with over 100 years of combined experience in aerospace and High Reliability mil-spec relays, will help you find the right product for your needs. Our High Reliability Space Relays Department experts are cross-trained within their respective cells to achieve maximum quality and consistency. In addition, team and SPC training utilizing ISO 9000 concepts is given regularly.

### Applications

- Space Satellites (telecommunications)
- Weather Tracking
- Surveillance
- Infrared Observation Instrumentation
- Missile Systems
- Torpedo Guidance Circuits

CII High Reliability Space Relays customers include ITT's HIRS/3 and AVHRR/3 instruments designed for the Polar Orbiting Environmental Satellite (POES) and McDonnell Douglas's Delta Launch II and III Vehicles.

## KILOVAC Space Relays

The KILOVAC brand of lightweight relays and contactors handle high-power DC or high-voltage DC requirements for the space industry.

They are available hermetically sealed, with a variety of electrical configurations, power ratings, voltage ratings, and mounting styles to make your electrical system more reliable and capable.

The photo to the right shows “representative samples” of our KILOVAC brand relays and contactors for space applications.

Contact TE Connectivity for more information.

Products shown in photo as listed below:

### Back Row - 270Vdc Space-Rated Contactors:

**AP150X** — 150A

**AP90X** — 90A

**AP350X** — 350A

### Middle Row - Space-Rated Contactors:

**MAP200** —

Available in Form X (Electrically Held) and Form P (Latching) configurations.

Available in Vertical-Mount (shown) and Horizontal-Mount configurations.

**MAP100** —

Available in Form X (Electrically Held) and Form P (Latching) configurations.

Available in Horizontal-Mount (shown) and Vertical-Mount configurations.

### Front Row - Space-Rated Relays:

**AP10** — 10A, 270Vdc

Available in Form A (SPST-NO) and Form B (SPST-NC) configurations.

Available in Panel-Mount (shown), PCB-Mount, and Chassis-Mount (unpotted).

**K41R** — 5kVdc

SPDT-Latching configuration (SPST-Latching as well as SPST-NO, SPST-NC, and SPDT Electrically-Held configurations also available)

**AP44P** — 15A, 270Vdc  
SPST-Latching

## TD2 Series Time Delay Relay

### Product Facts

- Qualified to:
  - MIL-PRF-83726/28
  - MIL-PRF-83726/29
  - MIL-PRF-83726/30
  - MIL-PRF-83726/31
- Fixed delay on operate, fixed delay on release, adjustable delay on operate & adjustable delay on release
- Meets or exceeds electrostatic discharge MIL-STD-1686 Class Non-Sensitive
- Welded hermetically sealed enclosure occupies about 1 in<sup>3</sup> (16.4 cm<sup>3</sup>)
- 10A, 2 form C (DPDT) output contacts

TD2 series time delay relays are available for delay on operate or delay on release operation. Either can be supplied as fixed or resistor adjustable types. Both military and commercial versions are offered.

These products consist of solid state timing circuits controlling our FCA-210 series relays, providing 2 Form C (DPDT) output contacts rated 10 amps. The internal timing circuit uses an R/C controlled oscillator with a program-

mable digital pulse counter, gating a semiconductor switch to operate the relay. Timing is independent of whether the controlling voltage is a ramp or step function.

For the adjustable models the user specifies a one decade range in seconds, within which the required delay will be set. This range is programmed internally at the time of manufacture. The required delay is obtained by calculating the oscillator timing resistor as

follows and connecting it externally to terminals 1D - 3D as below.

$$R_{EXT} = [(T_1 / T_0) - 1] 100K \text{ Ohms}$$

$T_0$  = Minimum time of selected decade in seconds.

$T_1$  = Required time delay.

#### EXAMPLE

Selected Range = 3-30 sec

Required Time = 15 sec

$$R_{EXT} = [(15/3) - 1] 100K = 400K$$

### Timing Action and Terminal Wiring

#### Delay On Operate:

The time delay starts on the application of input voltage to X1-X2. The timing circuit energizes the end of the time delay period.

#### Fixed Model

#### Adjustable Model

#### Delay On Release:

The input voltage is continuous to X1-X2. When the control voltage is applied to C1-X2 the timing circuit and the relay are both energized. The time delay starts when the control voltage is shut off.

#### Fixed Model

#### Adjustable Model

Terminal designations shown in the diagrams above are for reference only. They do not appear on the relay header.

**TD2 Series Time Delay Relay** (Continued)

**Specifications**

**Timing Data**

Timing Action	Delay on Operate or Delay on Release
Time Delay, Fixed – M83726/28, /29 and Commercial 28C, 29C	Select from 0.1 to 600 sec for Commercial Models Select from 0.1 to 500 sec for Mil-Spec Models
Time Delay, Adjustable – M83726/30, /31 and Commercial 30C, 31C	Select one decade between 0.1 to 1.0 and 60 to 600 seconds
Timing Accuracy (note 1)	±10% of Nominal Value
Recycle Time (note 2)	50 ms, max., to next cycle.
Power Interrupts	Accuracy is not affected by power interruptions up to 1 ms spaced at least 10ms apart.

**Input Data**

Input Voltage	28 Vdc nominal, range 20 - 32 Vdc
Duty Rating	Continuous
Input Current	110 mAdc Max @ 25°C
Control Voltage (applies only to Delay on Release type)	20 - 32 Vdc
Control Current	15 mAdc Max (applies only to delay on release types)
Input Voltage Polarity Protection	The timer will be inoperative during, and undamaged by, reversal of the polarity of the input voltage.

**Output Data**

Contact Form	2 Form C (DPDT)
Contact Material	Silver Cadmium Oxide, Gold plated
Contact Rating in Amps (Continuous Duty)	

Type of Load	Life (Min.) Cycles	28 Vdc	115 Vac 400Hz	115/200 Vac – 3 phase 400 Hz.	60 Hz.*
Resistive	100 x 10 <sup>3</sup>	10	10	10	2.5
Inductive	20 x 10 <sup>3</sup>	8	8	8	2.5
Motor	100 x 10 <sup>3</sup>	4	4	4	2.0
Lamp	100 x 10 <sup>3</sup>	2	2	2	1.0

\* 60 Hz. loads are rated at 10 x 10<sup>3</sup> cycles.

Overload Current	40 Adc; 60A, 400 Hz.
Rupture Current	50 Adc; 80A, 400 Hz.
Max. Contact Drop at 10A	Initial 0.150V; After Life 0.175V

**Electrical Data**

Electrostatic Discharge Withstand Voltage	16,000V
Transients (note 3):	
Positive Transients	+80V
Self-generated Transients	±50V, Max.
Spike Susceptibility	±600V, 10 μs, Max.
Insulation Resistance (note 4)	1,000 megohms at 500Vdc, between each pin and case
Dielectric Strength (note 4)	1,000Vrms at 60 Hz at sea level, between case and all pins connected together

**Environmental Data**

Ambient Temperature Range, Operating	-55°C to +125°C
Altitude	80,000 feet maximum
Shock Resistance	100 G's, 6 ms.
Vibration Resistance, Sinusoidal	Z & Y Enclosure: 30 G's, 33-3000Hz.; X & W Enclosure: 20 G's, 33-3000Hz.

**Mechanical Data**

Approximate Weight	2.5 oz. (71g) Max.
--------------------	--------------------

**NOTES**

1. The accuracy requirement applies to any combination of operating temperature and voltage. Add ±10ms for timing less than one second.
2. Recycle time to assure that the next timing cycle will be completed. Units can be recycled during timing and after time-out:  
Delay on operate models – Power must be OFF the input at least 10 ms. Delay on release models – Power must be ON the control terminal at least 10 ms.
3. Transient specifications are based on a maximum duty cycle of 1/50.
4. All wired terminals must be connected together during this test. Dielectric withstanding voltage and insulation resistance are measured between all mutually insulated wired terminals and between all these terminals and case.
5. Inductive loads must be diode suppressed.

**TD2 Series Time Delay Relay** (Continued)

**Outline Dimensions**

The standard terminal types and enclosures are illustrated below with dimensions expressed as inches ± 0.010 and (millimeters ± 0.25).

**Terminals**

All terminals on 0.200 (5.4) centers.

CODE "P"

Socket Pins – Gold Plated

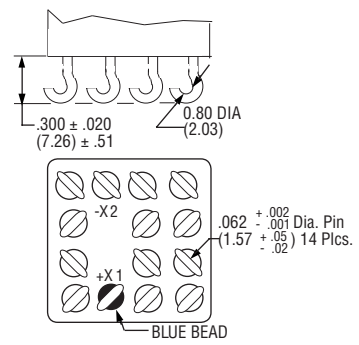

CODE "T"

Circuit Board Pins – Tin/Lead Plated

CODE "S"

Solder Hooks

**Enclosures**

All Enclosures have cupro-nickel cans bright acid tin/lead plated after assembly to terminal headers.

CODE "Z"

CODE "Y"

CODE "X"

CODE "W"

\*Metric threads available. To specify use "M" in place of "W"

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

**TD2 Series Time Delay Relay** (Continued)

**Part Numbering System  
Mil-Spec Types**

Typical Mil-Spec Part Number	TD2	28-	5002	P
Series: TD2 = Time delay relay with 2 pole, 10A output				
Mil-Spec Model: 28 = M83726/28 (Fixed, Delay on Operate) 29 = M83726/29 (Fixed, Delay on Release) 30 = M83726/30 (Adjustable, Delay on Operate) 31 = M83726/31 (Adjustable, Delay on Release)				
Time Delay Range (Within 0.1 to 500 seconds): For /28 and /29 types (fixed types), the delay is expressed in milliseconds in a four-digit code. The first three digits are significant. The fourth is the number of zeros following the first three. Example: 5002 is 50 seconds. For /30 and /31 types (adjustable types), the delay decade range is expressed in milliseconds in a four-digit code representing the upper limit of the range. The first three digits are significant. The fourth is the number of zeros following the first three. Example: 1001 is 1 second, so the range is 0.1 to 1 second.				
Terminals: P= Socket Pin Terminals S= Solder Hook Terminals				

Note: Mil-spec models have "Y" type enclosure.

**Commercial Types**

Typical Commercial Part Number	TD2	28C-	1001	P	Y
Series: TD2 = Time delay relay with 2 pole, 10A output					
Commercial Model: 28C = Fixed, Delay on Operate (COTS version of M83726/28) 29C = Fixed, Delay on Release (COTS version of M83726/29) 30C = Adjustable, Delay on Operate (COTS version of M83726/30) 31C = Adjustable, Delay on Release (COTS version of M83726/31)					
Time Delay Range (Within 0.1 to 600 seconds): For fixed types, the delay is expressed in milliseconds in a four-digit code. The first three digits are significant. The fourth is the number of zeros following the first three. Example: 5002 is 50 seconds. For adjustable types, the delay decade range is expressed in milliseconds in a four-digit code representing the upper limit of the range. The first three digits are significant. The fourth is the number of zeros following the first three. Example: 1001 is 1 second, so the range is 0.1 to 1 second.					
Terminals: P= Socket Pin Terminals S= Solder Hook Terminals T= Solder Pin Terminals					
Enclosure W = Mounting Studs X = Horizontal Flange Mount Y = Raised Vertical Flange Mount Z = No Mount					

**NOTE:** Commercial versions are available with timing ranges outside of .1 to 600 sec. range.

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

**Product Facts**

- Hermetically Sealed
- All Welded Construction
- Balanced Force
- Permanent Magnet Drive
- Contacts rated low level to 5 Amps VDC and 115/200 VAC 400 Hz, 3 Phase
- Weight .54 ounces max. (15.4 grams)
- Qualified to M83536/1, /2

**FCB-205 Series, 5 Amperes, DPDT**

The Series FCB-205 relay is a polarized single-side stable design, where the flux from a permanent magnet provides the armature holding force in the deactivated state, and its flux path is switched and combined with the coil flux in the operated state. This results in appreciably

increased contact pressure in both states over that of a spring return nonpolar design. We also manufacture other forms of the FCB relay:

**FCB-405** — 5 Amp 4PDT Relay

**General Specifications**

- Temperature Rating** — -70°C TO + 125°C
- Altitude** — 300,000 Feet
- Shock\*** — Z, Y, & X Enclosures — 200 g for 6 mS  
W & M Enclosures (Stud Mtg.) — 100 g for 6 mS  
T Enclosure (Socket Mounted in Track) — 50 g for 11 mS
- Vibration, Sinusoidal\*** — Z, Y, & X Enclosures — 0.12 DA 10 to 70 Hz, 30 g 70-3000Hz  
W & M Enclosures (Stud Mtg.) — 0.12 DA 10 to 57 Hz, 20 g 57-3000Hz  
T Enclosure (Socket Mounted in Track) — 0.06 DA 10 to 57 Hz, 10 g 57 to 500Hz, 20 g 500 to 3000 Hz
- Vibration, Random\*** — Z, Y, & X Enclosures — 0.4 g<sup>2</sup>/Hz 50-2000Hz  
T, W & M Enclosures — 0.2 g<sup>2</sup>/Hz 50-2000Hz
- Dielectric Strength** — At Sea Level — All circuits to ground and circuit to circuit — 1000 V rms  
Coil to ground — 1000 V rms  
At 80,000 Feet — 250 V rms

**Contact Rating — Amperes Ratings Are Continuous Duty**

Type of Load	Life (Min.) Cycles x 10 <sup>3</sup>	28 VDC	115VAC 400Hz	115/200VAC 400Hz, 3Ø
Resistive	100	5	5	5
Inductive	20	3	5	5
Motor	100	2	3	3
Lamp	100	1	1	1

\*60 Hz loads rated for 10,000 operations

Low Level Switching Capability: With contacts operating a load of 10 to 50 microamperes at 10 to 50 millivolts, the contact resistance miss detection level shall be 100 ohms max. Cycling rate is 1 to 12 per second, for 100,000 operations.

- Overload Current** — 20 AMPS DC, 30 AMPS 400Hz
- Rupture Current** — 25 AMPS DC, 40 AMPS 400Hz
- Contact Make Bounce** — 1.0 MILLISECOND AT NOMINAL VOLTAGE
- Max. Contact Drop at 5 Amps** — INITIAL 0.100 VOLTS
- End of Life** — 0.125 VOLTS

- Insulation Resistance** — Initial (500 VDC) — 100 MΩ Min.  
After Life or Environmental Tests — 50 MΩ Min.
- Operate Time at Nominal Voltage** — 4 ms or less
- Release Time at Nominal Voltage** — 4 ms or less

\* Max. contact opening under vibration or shock 10 microseconds

**Coil Data**

Coil Code	Nominal Voltages	Freq. Hz	DC Res. (B)	Over Temperature Range		
				Pickup or Below Volts	Dropout or Above Volts	Must Hold Voltage (C)
1	6	DC	20 Ω	4.5	0.3	2.5
2	12	DC	95 Ω	9.0	0.75	4.5
3	28	DC	500 Ω	18.0	1.5	7.0
4 (A)	28	DC	500 Ω	18.0	1.5	7.0
5	48	DC	1600 Ω	36.0	2.5	14.0

- A. CODE 4 COILS HAVE BACK EMF SUPPRESSION TO 42 VOLTS MAX.
- B. DC COIL RESISTANCE ± 10% AT 25°C
- C. RELAY WILL STAY IN PICKED-UP STATE DOWN TO MUST HOLD VOLTAGES SHOWN.
- D. MAX. OVERVOLTAGE: 6 & 12 VDC COILS 120% OF NOMINAL; ALL OTHERS 110% OF NOMINAL.

**FCB-205 Series, 5 Amperes, DPDT** (Continued)

Below are shown the standard terminal types and the enclosures available. Specify the assembly as indicated under How To Order. Dimensions are shown in inches ± .010 and (Millimeters ± .25).

**Terminals**

**CODE "A" Socket Pin Terminals**

**CODE "B" Solder Pin Terminals**

**CODE "C" Solder Pin Terminals**

**CODE "H" 90° Solder Pins**

**CODE "Z"**

**CODE "Y"**

**Enclosures**

All Enclosures have Cupro-Nickel Cans bright acid tin/lead plated after assembly to terminal headers.

Dimensions: Inches ± .010 (mm ± .25)

Enclosure "T" is for use with track mounted sockets and requires socket pin terminals, but no gasket. The gasket is included in the socket assembly.

**CODE "X"**

**CODE "W"**

**CODE "T"**

**FCB-205 Series, 5 Amperes, DPDT** (Continued)

**Terminal Wiring**

**DC Coils**

**Transient Suppression**

**NOTE:** Polarity must be observed with DC coil supply. Relay is polarized with a permanent magnet and will not operate or be damaged by reverse polarity.

Diodes used in transient suppression and in AC rectifier circuits have peak inverse voltage rating of 600 VDC minimum. Zener diodes have a minimum rating of 1 watt.

Terminal designations are for reference only and do not appear on the header.

- Weight .93 ounces max. (26.4 grams)
- Qualified to M83536/5 & /6

The Series FCB-405 relay is a polarized single-side stable design, where the flux from a permanent magnet provides the armature holding force in the deactivated state, and its flux path is switched and combined with the coil flux in the operated state. This results in appreciably

increased contact pressure in both states over that of a spring return nonpolar design. We also manufacture other versions of this relay:

**FCB-205** — 5 Amp DPDT Relay

## CII FC-325 Series Relays

### Product Facts

- Non-latching Hermetically Sealed Relay
- Corrosion protected metal can
- All welded construction.
- 1.5 inch cube enclosure
- 0.452 lbs
- Excellent for switching harsh inductive, motor, and lamp loads
- -70°C to +125°C temperature range
- 80,000 feet altitude rating
- 28 Vdc or 115 Vac coils
- Solder hook or terminal block configurations
- Qualified to MS27418 specifications
- Higher current ratings than standard M83536 mid-range relays
- 3-Pole 25A Contacts (FORM X) Switching in 1.5 inch<sup>3</sup>
- Main contacts are suitable for use in 360-800 Hz variable frequency application

### Applications

- Launch Systems
- Power Distribution
- Fuel Pumps
- Guidance and Navigation Systems
- Aircraft Galley/Cabin Equipment
- Weapons Systems
- Ground Support Equipment

FC-325 Series relays from TE Connectivity (TE) are hermetically sealed devices designed for harsh inductive, motor, and lamp load applications in aerospace, defense, and marine markets.

Configured as a 3PST/NO (DM), the double make/break contact design of the CII FC-325 Series relays

offer higher capability than comparable relays in the market. It shares the load across two contact sets, resulting in less wear and tear on the relay. This provides stable performance and extends the relay's life. The relay's all welded design creates a reliable alternative to similar solder sealed relays in the market.

DC Nonsuppressed and AC Coils

DC Suppressed Coils

### Coil Characteristics

Code	115 Vac 50/60 Hz	115 Vac 400 Hz	28 Vdc	28 Vdc (Suppressed)
Nominal operating voltage	115	115	28	28
Maximum operating voltage	122	122	32	32
Maximum pick-up voltage over temperature range	95	95	18	18
Maximum pick-up voltage over temperature range (Continuous Current test)	108	108	22.5	22.5
Drop-out voltage over temperature range	5.0	5.0	1.5	1.5
Coil current at +25° C (amperes)	.06	.055	-	-
Coil resistance - DC Coils (*)	-	-	160	160
Back EMF Suppression to (VDC)	-	-	-	42

### Contact Characteristics

Load Type	Life Cycles	Current Rating (A)			
		28 Vdc	115 Vac, 1 Phase Power		115/200 Vac, 3 Phase Power
			400 Hz	50/60 Hz	
Resistive	50,000	25	25	25	25
Inductive	10,000	15	25	25	25
Motor	50,000	20	20	12	12
Lamp	50,000	10	10	10	10
Mechanical Life, Reduced Current	200,000	6.3	6.3	6.3	6.3

\* For other coil voltages consult factory.

### General Specifications

- Temperature Rating — -70°C to +125°C
- Altitude — 80,000 Feet
- Shock — 50 g/11 ms
- Sinusoidal Vibration — 10 g/5 to 1000 Hz

### Electrical

- Dielectric Strength at Sea Level: Coil to Case — 1250 Vrms
- All Other Points — 1500 Vrms
- Dielectric Strength at 80,000 ft (25,000 m) — 500 Vrms (all points)
- Insulation Resistance at 500 Vdc: Initial — 100 MΩ min.
- After Life or Environmental Test — 50 MΩ min.
- Contact Voltage Drop at Nominal Current: Initial Value — 150 mV max. After Life — 175 mV max.

### Operational

- Operate Time at Nominal Voltage: AC — 25 ms max. DC — 20 ms max.
- Release Time at Nominal Voltage: AC — 50 ms max. DC — 10 ms max.
- Bounce Time at Nominal Voltage — 2 ms max.

**Product Facts**

- Hermetically Sealed
- All Welded Construction
- Balanced Force
- Permanent Magnet Drive
- Contacts — Silver Cadmium Oxide with Gold Plating
- Coils for DC, 50 to 400Hz and 400Hz AC
- Weight 2.89 ounces max. (82 grams)
- Qualified to M83536/32, /33

**FCA-325 Series, 25 Amperes, 3PDT**

The Series FCA-325 relay is a polarized single-side stable design, where the flux from a permanent magnet provides the armature holding force in the deactivated state, and its flux path is switched and combined with the coil flux in the operated state.

This results in appreciably increased contact pressure in both states over that of a spring return nonpolar design. We also manufacture other versions of this relay:

**FCA-125** – 25 Amp SPDT Relay

**FCAC-325** — 25 Ampere 3PST-NO Relay with 2 amp SPDT auxiliary

## FCA-150 Series, 50 Amps, 1PST/NO (DM) Relay

### Product Facts

- 50,000 cycles under resistive load
- Corrosion-protected, hermetically sealed metal enclosure
- -70° to +125°C temperature range
- Rated for altitude to 300,000 ft. in high-vibration, high-shock environments
- 1 Form X (SPST-NO-DM) contact
- Meets MIL-PRF-6106 requirements
- 50 A switching capability
- Balanced force design
- One cubic inch in size
- <90 grams total weight
- Non-latching relay
- Available with 1 Form C (SPDT) 2 A auxiliary contact
- 6, 12 and 28 Vdc coils available
- Optional transient suppression

The FCA-150 series relay from TE Connectivity (TE) is a polarized, single-side stable design, where the flux from a permanent magnet provides the armature holding force in the deactivated state, and its flux path is switched and combined with the coil flux in the operated state. This results in appreciably increased contact force in both states over that of a spring return non-polarized

design. The FCAC-150 series has a 1 Form C (SPDT) auxiliary contact set rated at 2 A. Designed and built to perform under the most demanding environmental conditions, FCA-150 series relays withstand such changing environmental factors as temperature, altitude, shock, vibration, and salt spray. Minimum mechanical life expectancy is 50,000 cycles under resistive load.

### Performance Data

#### Electrical Characteristics

**Initial Insulation Resistance** — 100 MΩ, minimum, at 500 Vdc, between each pin and case

**Insulation Resistance After Life or Environmental Test** — 50 MΩ, minimum, at 500 Vdc, between each pin and case

#### Dielectric Strength at Sea Level:

Contacts to Ground and Between Contacts — 1250 Vrms, 60 Hz  
Coil to Ground — 1000 Vrms, 60 Hz  
Dielectric Strength at 80,000 ft (25,000 m) — 500 Vrms, 60 Hz (all points)

#### Environmental

**Ambient Temperature Range, Operating**— 70°C to +125°C

**Altitude**— 300,000 ft

**Shock Resistance**— 50 G, 11 ms

**Vibration Resistance, Sinusoidal**— 20 G, 75-3000 Hz

### Specifications

#### Contact Data

Initial Insulation Resistance (note 1)	100 megohms, minimum, at 500Vdc, between each pin and case
Insulation Resistance After Life or Environmental Test (note 1)	50 megohms, minimum, at 500Vdc, between each pin and case
Dielectric Strength At Sea Level	
Contacts to Ground and Between Contacts	1,250Vrms, 60 Hz.
Coil to Ground	1,000Vrms, 60 Hz.
Dielectric Strength at 80,000 ft (25,000m), All Points (note 4)	
	500Vrms, 60 Hz

Environmental Data

Ambient Temperature Range, Operating	-70°C to +125°C
Altitude	300,000 feet
Shock Resistance	50 G's, 11 ms.
Vibration Resistance, Sinusoidal	20 G's, 75-3000Hz.

Mechanical Data

Approximate Weight	3.2 oz. (90g) Max.
--------------------	--------------------

NOTES

1. All wired terminals must be connected together during this test. Dielectric withstanding voltage and insulation resistance are measured between all mutually insulated wired terminals and between all these terminals and case.

- C Solder Hook Coil Terminals, Stud Power Terminals
- K Terminal Block, Stud Power Terminals

Enclosure (see drawings for details)

- R Horizontal Flange Mount, Rotated
- U Flush Vertical Flange Mount
- X Horizontal Flange Mount
- Y Raised Vertical Flange Mount
- Z No Mount

Coil Voltage (NOMINAL)

- 1 6 VDC
- 2 12 VDC
- 3 28 VDC
- 4 28 VDC Nominal, with Back EMF Suppression

## FCA-150NC Series, 50 Amps, 1PST/NC (DB) Relay

### Product Facts

- Non latching hermetically sealed relay
- Balanced force design
- Hermetically sealed, corrosion protected metal can
- All welded construction
- 6, 12 and 28Vdc coils available.
- Weight 90 grams
- Designed and built in accordance to MIL-PRF-6106

### Specifications

#### General Characteristics

Temperature range	-70° C to +125° C
Altitude	300,000 feet
Dielectric strength at sea level	
- Contacts to ground and between contacts	1250 Vrms / 60 Hz
- Coil to ground	1000 Vrms / 60 Hz
Dielectric strength at altitude 25000 m (80,000 ft) (all points)	500 Vrms / 60 Hz
Initial insulation resistance at 500 Vdc	100 MΩ min.
Initial insulation after life or environmental test	50 MΩ min.
Sinusoidal vibration	20g / 75 to 3000 Hz
Shock	50g / 11 ms
Operate time at nominal voltage	15 ms max.
Release time	15 ms max.
Bounce time	1 ms max.
Contact voltage drop at nominal current	
-initial value	150 mV max.
-after life	175 mV max.

#### Coil Data

Coil Code	1	2	3	4(A)
Nominal Operating Voltage (Vdc)	6	12	28	28
Maximum Operating Voltage (Vdc)	7.3	14.5	29	29
Maximum Pick-Up Voltage at +125°C	4.5	9	18	18
Maximum Pick-Up Voltage at +125°C, continuous current test (Vdc)	5.7	11.25	22.5	22.5
Drop-Out Voltage at +125°C	0.3 – 2.5	0.75 – 4.5	1.5 – 7.0	1.5 – 7.0
Maximum Coil Current at +25°C (mA)	.50	.26	.15	.15
Back EMF Suppressed to (Vdc)	N/A	N/A	N/A	-42
Coil Resistance	18Ω	70Ω	290Ω	290Ω

For other coil voltages, consult factory.

PART NUMBERING SYSTEM

### Selection and Application Guide

This selection and application guide is suggested practices from ARP (Aerospace Recommended Practice) 4005 Concerning proper performance of relays.

**Caution:**

The use of any coil voltage less than the rated coil voltage may compromise the operation of the relay. Choosing the proper relay depends primarily on matching the relay to the load, power supply, and environment. Selection should be limited to items that meet the following requirements:

- A. Contacts** must be rated for the load. Current rating, type of load (resistive, lamp, motor, inductive, and so forth), impedance range, voltage rating, DC or AC, frequency, single phase or polyphase, polyphase load balance, and type of switching or transfer should all be considered. Each of the following switching and transfer functions places a different requirement on each of the relay contacts and must be considered when selecting a relay with the proper contact rating:
  - (1) On-Off Switching - DC, single phase or polyphase
  - (2) Motor Reversing (AC or DC)
  - (3) Transferring load between phases of same source
  - (4) Transferring load between unsynchronized AC sources
- B. Power supply characteristics** must be taken into account. Voltage regulation, variations in frequency, ripples and spikes, as well as steady state conditions, should be included. If more than one power supply is involved, not only must each be suitable but interaction between them also should be investigated.
- C. Coil (or coils)** should be rated so as to have proper operation under all anticipated conditions.
- D. Consideration of environmental conditions** anticipated throughout the service of life, as well as those expected during storage and transportation before installing the relays in equipment, is mandatory. Electrical parameters, environmental factors, mechanical stresses, and compatibility are among the categories for which the relay must be reviewed.
- E. The circuit in which the relay is used**, the interlocking feature employed, the wiring harness, and the associated components should all be reviewed for assuring mutual suitability.
- F. Relays should be hard wired** whenever possible, to avoid the need for additional contact points associated with the relay plug-in socket arrangement. (Plug-in types should be considered for quick turnaround times).
- G. To permit "safe" isolation** of relay circuit in the OFF condition, and better eliminate an electrical shock hazard, an electromechanical switching device should be placed between the positive terminal of the power source and relay coil.
- H. Proper transistor control** of the relay coil requires a stable reference voltage. This can be done by connecting the plus side of the coil to the positive side of the power source, the minus side of the relay coil to the collector of an NPN transistor, the emitter of the transistor to the grounded side of the power source, and the transistor base to the control voltage. For example, see MIL-R-28776/1.
- I. Any switching device** controlling the relay coil circuit must be capable of withstanding, without damage, the sum of the maximum coil circuitry voltage and the peak value of transient voltage that results when the coil circuit is opened; for example, a switch controlling a relay coil that is supplied with a 28V DC line and subjected to a transient voltage suppressed to 42V must be capable of withstanding 28V + 42V or a 70V surge without damage.
- J. In selecting solid state electronic switching devices** to control relay coil circuits, care must be used in selecting a solid state device with a leakage current (in the "off state") that is sufficiently low to permit the relay to drop out.
- K. Control of the relay coil circuit** by other than step-function switching may invalidate published relay performance properties such as pickup and dropout voltages, pickup, dropout, and bounce times.

### Cross Reference - Socket to Relay

**NOTE:**  
**TE Connectivity Does Not Manufacture Relay Sockets.**

This Socket to Relay cross reference is provided for additional design assistance. Several of TE Authorized Distributors carry relay sockets for your convenience. Relay sockets come with a variety of profiles, mounting styles, and mounting hardware options, so please contact the relay socket supplier of your choice or one of our Authorized Distributors who carry relay sockets for additional information.

## DH-14 and DHR-14 Series Contactors, Rated up to 25 Amps, 115/200 VAC, 400 Hz

### Product Facts

- 3PDT
- Hermetically sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — 3PDT

**Rated Operating Voltage** — 115/200 VAC, 400 Hz

**Resistive Rating** — 25 Amps

**Inductive Rating** — 20 Amps

**Motor Rating** — 15 Amps

### General Characteristics

**Temperature Range** — -55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Dielectric Strength** — All Circuits to Ground — 1,500 Vrms  
Circuit to Circuit — 1,500 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms

**Insulation Resistance, Initial** — 100 megohm min.

**Altitude** — 80,000 ft.

**Weight, Max.** — .41 to .50 lbs

### Duty Cycle

VAC 400 Hz — AC Continuous (Type A, See diagram below)

Vdc — Continuous or continuous with suppression (See diagram B & C below)

**Operating Voltage, Nom.** —

VAC 400 Hz — 115 VAC

Vdc — 28 Vdc

**Pickup Voltage @ 25°C, Max.** —

VAC 400 Hz — 95 VAC

Vdc — 18 Vdc

**Dropout Voltage @ 25°C, Max.** —

VAC 400 Hz — 25 VAC

Vdc — 1.5 to 7 Vdc

**Coil Resistance ±20% @ 25°C** —

VAC 400 Hz — N/A

Vdc — 290 Ohms

### Coil Characteristics

#### Coil Type

A — AC Continuous

B — Continuous

C — Continuous with Suppression

## DHR-18 Series, Rated up to 30 Amps, 115 VAC, 400 Hz

### Product Facts

- 3PDT, Center off
- Hermetically sealed

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — 3PDT, Center Off

**Rated Operating Voltage** — 115 VAC, 400 Hz

**Resistive Rating** — 30 Amps

**Inductive Rating** — 20 Amps

#### General Characteristics

**Operating Temperature** — 71°C

**Weight, Max.** — 14 oz.

#### Coil Characteristics

**Duty Cycle** — Continuous

**Coil Rating** — 115 VAC, 400 Hz

**Pickup Voltage, Max.** — 90 Vdc, Hot

**Dropout Voltage** — 45 ± 20 Vdc

**Current at 115 Vdc & 25°C** — 0.28 Amp max.

Mounting Style A

**Circuit Configurations** (Consult factory for other available circuit configurations)

Circuit Configuration 1

6 HARTMAN Power Switching AC Contactors

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
DHR-18-1	Hermetically Sealed	A	Continuous	1	1616050-9

## D7, DH7, DHR7, DR7 Series, Rated up to 50 Amps, 115/200 VAC, 400 Hz

### Product Facts

- 3PDT and 3PST NO
- Gasket sealed or Hermetically sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — 3PDT and 3PST NO

**Rated Operating Voltage** — 115/200 VAC, 400 Hz, 3 phase

**Resistive Rating** — 50 Amps

**Inductive Rating** — 50 Amps

**Motor Rating** — 30 Amps

**Lamp Rating** — 15 Amps

#### General Characteristics

**Temperature Range** — -55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Dielectric Strength** — All Circuits to Ground — 1,500 Vrms  
Circuit to Circuit — 1,500 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms

**Insulation Resistance, Initial** — 100 megohm min.

**Altitude** — D7, DR7 — 50,000 ft  
DH7, DHR7 — 80,000 ft

**Weight, Max.** — .94 to 1.20 lbs

#### Coil Characteristics

**Duty Cycle** — VAC 400 Hz — AC Continuous (Type A & E, See diagram below)

Vdc — Continuous (Type B, See diagram below)

Vdc — Continuous with suppression (Type C & D, See diagram below)

**Operating Voltage, Nom.** — VAC 400 Hz — 115 VAC  
Vdc — 28 Vdc

**Pickup Voltage @ 25°C, Max.** — VAC 400 Hz — 75 VAC  
Vdc — 18 Vdc

**Dropout Voltage @ 25°C, Max.** — VAC 400 Hz — 12 to 38 VAC  
Vdc — 1 to 7 Vdc

**Coil Resistance ±20% @ 25°C** — VAC 400 Hz — 505 Ohms  
Vdc — 126 Ohms

**Coil Current @ 25°C, Max.** — VAC 400 Hz — .065 Amp  
Vdc — .28 Amp

### Coil Type

A — AC Continuous

B — Continuous

C — Continuous with Suppression

D — Continuous with Suppression

E — AC Continuous

## BH-316 Series, Rated up to 50 Amps, 115/200 VAC, 400 Hz or 28 Vdc

### Product Facts

- 3PST NO, Double break
- Hermetically sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — 3PST NO, Double Break

**Rated Operating Voltage** — 28 Vdc or 115/200 VAC, 400 Hz, 3 phase

**Resistive Rating** — 50 Amps

**Inductive Rating** — 115/200 VAC, 400 Hz, 3 phase — 50 Amps

At 28 Vdc — 25 Amps

**Motor Rating** — 50 Amps

#### General Characteristics

**Temperature Range** — -55°C to +125°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 100,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 200,000 cycles

**Dielectric Strength** — All Circuits to Ground — 1,500 Vrms  
Circuit to Circuit — 1,500 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms

**Insulation Resistance, Initial** — 100 megohm min.

**Weight, Max.** — 1.20 lbs

**Impact Shock** — 5 G

**Close Time @ 28 Vdc and 25°C, Max.** — 25 msec

**Release Time @ 28 Vdc and 25°C, Max.** — 10 msec

#### Coil Characteristics

**Duty Cycle** — Continuous

**Operating Voltage, Nom.** — 28 Vdc

**Pickup Voltage, Max.** — 18 Vdc

**Dropout Voltage** — 1.5 to 7 Vdc

**Coil Current, Holding, Max.** — 0.5 Amp

## B-138 Series, Rated up to 60 Amps, 115/200 VAC, 400 Hz

### Product Facts

- TPST NO and TPDT NC
- Gasket sealed or Hermetically sealed
- 115/200 VAC, 400 Hz, 3 phase
- Auxiliary contacts available
- Meets the requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

- Contact Arrangement** — TPST NO and TPDT NC
- Rated Operating Voltage** — 115/200 VAC, 400 Hz, 3 phase
- Current, Resistive** — 60 Amps
- Current, Inductive** — 60 Amps
- Current, Motor** — 60 Amps
- Current, Rupture** — 600 Amps

#### General Characteristics

- Temperature Range** — -55°C to +71°C
- Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles
- Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles
- Dielectric Strength** — All Circuits to Ground — 1,500 Vrms  
Circuit to Circuit — 1,500 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms
- Altitude Max.** — 50,000 ft.
- Weight, Nominal** — 1.50 to 2.0 lbs

#### Coil Characteristics

- Duty Cycle** — Continuous or continuous with suppression
- Operating Voltage, Nom.** — 28 Vdc
- Pickup Voltage, Max. @ 85°C** — 18 Vdc
- Dropout Voltage, Max.** — 1.5 to 7 Vdc
- Coil Current @ 29 Vdc Max. @ 25°C** — 0.5 Amps
- Inrush** — 5 Amps

- Dropout Voltage @ 25°C, Max.** — 1.5 to 7 Vdc
- Coil Resistance ±20% @ 25°C** — 113 Ohms

### Coil Type

A — Continuous

B — Continuous with Suppression

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## D25 and DH25 Series, Rated up to 120 Amps, 115/200 VAC, 400 Hz (Continued)

### Circuit Configurations (Consult factory for other available circuit configurations)

Circuit Configuration 1

Circuit Configuration 2

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
D-25CF	Gasket/Vented	A	A	1	1616015-1
DH-25CU	Hermetically Sealed	B	B	2	1616017-4

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## D-31 Series, Rated up to 100 Amps, 115/200 VAC, 400 Hz

### Product Facts

- 3PDT, Center off
- Hermetically sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — 3PDT, Center Off

**Rated Operating Voltage** — 115/200 VAC, 400 Hz, 3 phase

**Resistive Rating** — 100 Amps

#### General Characteristics

**Temperature Range** — -55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Dielectric Strength** — All Circuits to Ground — 1,500 Vrms  
Circuit to Circuit — 1,500 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms

**Altitude** — 50,000 ft

**Weight, Max.** — 2.31 lbs

#### Coil Characteristics

**Duty Cycle** — Continuous

**Operating Voltage, Nom.** — 28 Vdc

**Pickup Voltage @ 71°C, Max.** — 18 Vdc

**Dropout Voltage, Max.** — 1.5 to 7 Vdc

**Coil Resistance ±20% @ 25°C** — 160 Ohms

Mounting Style A

**Circuit Configurations** (Consult factory for other available circuit configurations)

Circuit Configuration 1

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
D-31C	Gasket/Vented	A	Continuous	1	1616049-1

## D-31, DH-31, and DHL-31 Series, Rated up to 120 Amps, 115/200 VAC, 400 Hz

### Product Facts

- 3PDT, Center off
- Gasket sealed or Hermetically sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

- Contact Arrangement** — 3PDT, Center Off
- Rated Operating Voltage** — 115/200 VAC, 400 Hz, 3 phase
- Resistive Rating** — 120 Amps
- Inductive Rating** — 120 Amps
- Motor Rating** — 80 Amps
- Rupture Rating** — 1,000 Amps

#### General Characteristics

- Temperature Range** — -55°C to +71°C
- Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles
- Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles
- Dielectric Strength** — All Circuits to Ground — 1,500 Vrms  
Circuit to Circuit — 1,500 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms
- Altitude** — D-31 — 50,000 ft  
DH-31, DHL-31 — 70,000 ft
- Weight** — 2.60 lbs

#### Coil Characteristics

- Duty Cycle** — Continuous (Type A, See diagram below)  
Continuous with suppression (Type B or Type C, See diagram below)
- Operating Voltage, Nom.** — 28 Vdc
- Pickup Voltage @ 25°C, Max.** — Coil Type A and C — 18 Vdc  
Coil Type B — 15 Vdc
- Dropout Voltage @ 25°C, Max.** — Coil Type A and C — 1.5 to 7 Vdc  
Coil Type B — 2 to 7 Vdc
- Coil Resistance ±20% @ 25°C** — Coil Type A — N/A  
Coil Type B — 100 Ohms  
Coil Type C — 132 Ohms
- Coil Current @ 25°C, Max.** — .350 Amp

### Coil Type

A — Continuous

B — Continuous with Suppression

C — Continuous with Suppression

D — Latching

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## D-25 Series, Rated up to 125 Amps, 115/200 VAC, 400 Hz

### Product Facts

- 3PDT, Side stable
- Gasket sealed

### Performance Data

#### Electrical Characteristics

- Main Contacts —**
- Contact Arrangement —** 3PDT, Side Stable
- Rated Operating Voltage —** 115/200 VAC, 400 Hz
- Resistive Rating —** 125 Amps
- Inductive Rating —** 100 Amps
- Motor Load —** 60 Amps
- Rupture Rating —** 600 Amps
- Overload Rating —** 600 Amps
- Auxiliary Contacts —**
- Contact Arrangement —** 2PDT
- Voltage —** 28 Vdc or 115 VAC, 400 Hz
- Resistive Rating —** 3 Amps
- General Characteristics**
- Temperature Range —** -55°F to +71°F
- Altitude, Max. —** 50,000 ft
- Weight, Nominal —** 2.75 lbs
- Coil Characteristics**
- Duty Cycle —** Continuous
- Operating Voltage, Nom. —** 28 Vdc
- Pickup Voltage @ 25°C, Max. —** 18 Vdc
- Dropout Voltage @ 25°C —** 2.5 to 7 Vdc
- Coil Resistance @ 25°C —** 113 Ohms ± 20%

Mounting Style A

### Circuit Configurations (Consult factory for other available circuit configurations)

Circuit Configuration 1

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
D-25BAH	Gasket/Vented	A	Continuous	1	1616034-2

## B309 Series, Rated up to 130 Amps, 115 VDC

### Product Facts

- 3PST NO, Single break main contacts
- 2PDT Auxiliary contacts (note 1)
- Gasket sealed
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

- Contact Arrangement** — 3PST NO, Single Break
- Rated Operating Voltage** — 115 VDC
- Resistive Current Rating** — 130 Amps (see note 2)
- Rupture Rating** — 1300 Amps (see note 3)

#### General Characteristics

- Temperature Range** — -55°C to +85°C
- Minimum Electrical Cycles** — 50,000
- Minimum Mechanical Cycles** — 100,000 @ 32.5 A
- Dielectric Strength** — 1500 Vrms
- Altitude** — 50,000 ft
- Weight, Max.** — 1.35 lbs
- Duty Cycle** — Continuous (Electronically Economized)
- Coil Operating Voltage** — 28 Vdc
- Drop Out Voltage** — 1.5 to 7 Vdc

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
B309A	Gasket Sealed	A	Continuous, Electronically Economized	1	1-1616975-7

### NOTES

1. Other aux contact configurations available. Consult Factory.
2. Units with current ratings to 175A are available. Consult Factory.
3. Units with rupture ratings to 1750A are available. Consult Factory.

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## B-451 Series, Rated up to 175 Amps, 115/200 VAC, 400 Hz

### Product Facts

- 3PDT, Magnetic latching
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — 3PDT, Magnetic Latching

**Rated Operating Voltage** — 115/200 VAC, 400 Hz

**Resistive Rating** — 175 Amps

#### General Characteristics

**Temperature Range** — -55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Dielectric Strength** —  
All Circuits to Ground — 1,500 Vrms  
Circuit to Circuit — 1,500 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms

**Insulation Resistance, Initial** — 100 megohm min.

**Altitude** — 50,000 ft.

**Weight, Max.** — 2.44 lbs

#### Coil Characteristics

**Duty Cycle** — Continuous, self-deenergizing

**Operating Voltage, Max.** — 30 Vdc

**Close Voltage @ 15 to 30 Vdc** —  
Resistance — 4.4 +10% Ohms  
Current — 5 Amp Max.

**Trip Voltage @ 15 to 30 Vdc** —  
Resistance — 5.0 +10% Ohms  
Current — 5 Amp Max.

Mounting Style A

**Circuit Configurations** (Consult factory for other available circuit configurations)

Circuit Configuration 1

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
B451	Gasket/Vented	A	Continuous, Self-Deenergizing	1	1616023-3

### B-312 Series, Rated up to 175 Amps, 253/440 VAC, 50-60 Hz

#### Product Facts

- 3PST NO, Double break
- Gasket sealed
- 235/440 VAC, 50-60 Hz, 3 phase
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

#### Performance Data

##### Electrical Characteristics

**Contact Arrangement** — 3PST NO, Double Break

**Rated Operating Voltage** — 253/440 VAC, 50-60 Hz, 3 phase

**Current, Resistive** — 175 Amps

**Current, Inductive** —

B312DB — 70 Amps

**Current, Motor** — 150 Amps

**Current, Rupture** — 1,500 Amps

##### General Characteristics

**Temperature Range** — -55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Dielectric Strength** — All Circuits to Ground — 1,500 Vrms  
Circuit to Circuit — 1,500 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms

**Weight, Max.** — 3.0 lbs

##### Coil Characteristics

**Duty Cycle** — Continuous, economizing

**Operating Voltage, Nom.** — 28 Vdc

**Pickup Voltage** — 18 Vdc

**Dropout Voltage** — B312DB — 1.5 to 7 Vdc  
B312CH — 1 to 7 Vdc

## B-312 Series, Rated up to 175 Amps, 253/440 VAC, 50-60 Hz (Continued)

## KA175 Series, Rated up to 175 Amps, 115 or 230 VAC, 400-800 Hz

Lightweight,  
High Performance

### Product Facts

- 3PST NO, Side stable
- Gasket sealed
- Buss bar mount

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — 3PST NO, Side Stable

**Rated Operating Voltage** — 115/230 VAC, 230/460 VAC  
400-800 Hz

**Resistive Rating** — 175 Amps

### General Characteristics

**Temperature Range** — -55°C to +85°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles  
**Weight, Max.** — 1.25 lbs

### Coil Characteristics

**Duty Cycle** — Continuous, economizing

**Operating Voltage, Nom.** — 28 Vdc

**Pickup Voltage** — 18 Vdc

**Dropout Voltage** — 1.0 to 7 Vdc

### Circuit Configurations (Consult factory for other available circuit configurations)

## SA136F Series, Rated up to 175 Amps, 240/416 VAC

### Product Facts

- 3PST NO, Side stable
- Gasket/Vented sealed

### Performance Data

#### Electrical Characteristics

##### Main Contacts —

**Contact Arrangement** — 3PST NO, Double Break

**Rated Operating Voltage** — 240/416 VAC, 50/60/400 Hz

**Resistive Rating** — 240 Amps

**Rupture Rating** — 2400 Amps

**Auxiliary Contacts** — 1SPST NO

**Contact Arrangement** — 4PST NC

**Voltage, Nom.** — 28 Vdc

**Resistive Rating** — 5 Amps, 28 Vdc; 10 Amps, 120 VAC

#### General Characteristics

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Weight, Max.** — 2.8 lbs

#### Coil Characteristics

**Duty Cycle** — Continuous, economizing

**Operating Voltage, Nom.** — 24 Vdc

**Pickup Voltage, Max.** — 18 Vdc

**Dropout Voltage** — 1 to 10 Vdc

**Coil Resistance** — 240A

Rupture — 2400A

Mounting Style A

**Circuit Configurations** (Consult factory for other available circuit configurations)

Circuit Configuration 1

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## B-312 Series, Rated up to 200 Amps, 115 VAC, 400 Hz

### Product Facts

- 3PST NO
- Gasket sealed
- 115 VAC, 400 Hz

### Performance Data

#### Electrical Characteristics

##### Main Contacts —

**Contact Arrangement** — 3PST NO, Double Break

**Rated Operating Voltage** — 115 VAC, 400 Hz

**Resistive Rating** — 200 Amps

**Inductive Rating** — 200 Amps

**Rupture Rating** — 2000 Amps

##### Auxiliary Contacts —

**Contact Arrangement** — 4PST NC

**Voltage, Nom.** — 28 Vdc or 115 VAC, 400 Hz

**Resistive Rating** — 5 Amps

#### General Characteristics

**Temperature Range** —

-55°C to +71°C

**Operating Cycles (Life) at Rated**

**Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life)**

**Mechanical, Min.** — 100,000 cycles

**Weight, Max.** — 3 lbs

#### Coil Characteristics

**Duty Cycle** — Continuous, economizing

**Operating Voltage, Nom.** — 28 Vdc

**Pickup Voltage, Max.** — 18 Vdc

**Dropout Voltage** — 1 to 7 Vdc

#### Coil Resistance —

Pickup — 12 Ohms ± 20%

Holding — 60 Ohms ± 20%

Mounting Style A

**Circuit Configurations** (Consult factory for other available circuit configurations)

Circuit Configuration 1

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number

## B-393 Series, Rated up to 260 Amps, 120/208 VAC, 400 Hz

### Product Facts

- 3PDT, Center off, double break
- Gasket sealed

### Performance Data

#### Electrical Characteristics

##### Main Contacts —

**Contact Arrangement** — 3PDT, Center Off, Double Break

**Rated Operating Voltage** — 120/208 VAC, 400 Hz

**Resistive Rating** — 260 Amps

**Inductive Rating** — 260 Amps

**Rupture Rating** — 2600 Amps

##### Auxiliary Contacts —

**Contact Arrangement** — 4PST NO, 2PST NC

**Resistive Rating** — 5 Amps

**Inductive Rating** — 5 Amps

**Lamp Rating** — 5 Amps

#### General Characteristics

**Temperature Range** —

-55°C to +71°C

**Operating Cycles (Life) at Rated**

**Resistive Load** — 50,000 cycles

**Operating Cycles (Life)**

**Mechanical** — 100,000 cycles

**Altitude Max.** — 40,000 ft.

**Weight** — 5 lbs

#### Coil Characteristics

**Duty Cycle** — Continuous, economizing

**Operating Voltage, Nom.** — 28 Vdc

**Pickup Voltage, Max.** — 18 Vdc

**Dropout Voltage** —

R-S Coil — 14 Vdc

W-H Coil — 7 Vdc

Mounting Style A

**Circuit Configurations** (Consult factory for other available circuit configurations)

Circuit Configuration 1

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number

## B-429 Series, 260/350 Amps, 115/200 VAC or 120/208 VAC

### Product Facts

- 3PST NO, Double break
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — 3PST NO, Double Break

**Rated Operating Voltage** —  
 B-429-1 and B-429W — 115/200 VAC, 400 Hz, 3 phase  
 B-429CA — 120/208 VAC

**Resistive Rating** —  
 B-429-1 — 275 Amps  
 B-429CA — 350 Amps  
 B-429W — 260 Amps

### General Characteristics

**Temperature Range** —  
 -55°C to +85°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** —  
 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Dielectric Strength** —  
 All Circuits to Ground — 1,500 Vrms  
 Circuit to Circuit — 1,500 Vrms  
 Coil to Ground and Aux. Contacts — 1,000 Vrms

**Insulation Resistance, Initial** —  
 100 megohm min.

**Altitude** — 50,000 ft.

**Weight, Max.** — 4.0 lbs

### Coil Characteristics

**Duty Cycle** — Continuous, economized with suppression (Type A or B, See diagram below)

**Operating Voltage, Nom.** — 28 Vdc

**Pickup Voltage, Max.** —

Coil Type A — 15 Vdc  
 Coil Type B — 18 Vdc

**Dropout Voltage, Max.** —

Coil Type A — 1.5 to 10 Vdc  
 Coil Type B — 1 to 7 Vdc

**Coil Current Inrush** —

Coil Type A — 6 Amps  
 Coil Type B — 2.7 Amps

**Coil Current Holding** —

Coil Type A — 0.6 Amps  
 Coil Type B — 0.56 Amps

### Coil Type

A — Continuous, Economized with Suppression

B — Continuous, Economized with Suppression

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## B-429 Series, 260/350 Amps, 115/200 VAC or 120/208 VAC (Continued)

## B-430 Series, Rated up to 275 Amps, 115/200 VAC, 400 Hz

### Product Facts

- 3PST, Double break, magnetic latching
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — 3PST, Double Break, Magnetic Latching

**Rated Operating Voltage** — 115/200 VAC, 400 Hz, 3 phase

**Resistive Rating** — 275 Amps

**Interrupt Rating** — 2,000 Amps

#### General Characteristics

**Temperature Range** — -55°C to +85°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Dielectric Strength** —  
 All Circuits to Ground — 1,500 Vrms  
 Circuit to Circuit — 1,500 Vrms  
 Coil to Ground and Aux. Contacts — 1,000 Vrms

**Insulation Resistance, Initial** — 100 megohm min.

**Altitude** — 45,000 ft.

**Weight, Max.** — 4.0 lbs

#### Coil Characteristics

##### Duty Cycle

B-430-1 — Continuous, self-deenergizing (Type A, See diagram below)

B-430Z — Continuous, self-deenergizing with suppression (Type B, See diagram below)

**Operating Voltage Close, @ 85°C** —  
 Min. — 15 Vdc  
 Max. — B-430-1 — 28 Vdc  
 B-430Z — 29 Vdc

**Operating Voltage Trip, @ 85°C** —  
 Min. — 15 Vdc  
 Max. — B-430-1 — 28 Vdc  
 B-430Z — 29 Vdc

**Coil Current Closing, Max.** — 6 Amps

**Coil Current Trip, Max.** — 6 Amps

### Coil Type

A — Continuous, Self-Deenergizing

B — Continuous, Self-Deenergizing with Suppression

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

### K Series Connectors

#### Product Facts

- Light weight
- Small package size
- Small footprint
- Easy to package in panel assemblies
- Buss bar mount or chassis mount
- Designed to meet the applicable portions of MIL-PRF-6106
- 10X rupture current

TE HARTMAN brand of K Series contactors offer outstanding performance and reliability in a highly efficient package. The HARTMAN brand K-Series are among the smallest and lightest 200-1000 ampere DC contactors available in the aerospace industry.

These highly flexible buss bar mounted or chassis mounted units are designed for either continuous or start duty applications in the DC power distribution systems of military and commercial aircraft and ground vehicles.

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## K Series, Rated up to 200 Amps, 28 Vdc

### Product Facts

- Among the smallest and lightest 200 A aerospace-quality contactors available
- High-quality materials to help withstand harsh environments
- Environmentally sealed
- -55° to +85°C temperature range
- Shock and vibration resistant
- SPST, normally open
- 28 Vdc
- 200 A make/carry/break
- 1200 A inrush
- 2000 A maximum interrupt
- Electronically economized to reduce power

### Standards/Specifications

- MIL-PRF-6106P** — General Performance Specification for Electromechanical Relays
- MIL-STD-202H** — Test Method for Electronic and Electrical Component Parts
- RTCA/DO-160F** — Environmental Conditions and Test Procedures for Airborne Equipment

### Circuit Configurations

(Consult factory for other available circuit configurations)

### Performance Data

#### Electrical Characteristics

**Main Contacts** — 28 VDC SPST

Normally Open, Double Make

**Auxiliary Contacts** — two-pole, double-throw

**Economizer** — Electronically controlled

**Full Rupture Capability** — 2000 A (50 cycles per MIL-PRF-6106)

#### Electrical Life

Full Rated Resistive Load — 50,000 cycles

25% Rated Resistive Load — 100,000 cycles

**Altitude** — 50,000 feet max.

**Current** — Resistive Load: 200 A

Motor Load — 1200 A/200 A (inrush/carry)

Rupture: 2000 A

### General Characteristics

**Operating Temperature** — 55°C to +85°C

#### Weight

K200A1C: 0.33 lbs (150 g)

K200B1C: 0.29 lbs (132 g)

K200A3C: 0.43 lbs (195 g)

K200B3C02: 0.40 lbs (181 g)

### Coil Characteristics

**Nom. Operate Voltage** — 28 Vdc

Pickup Voltage — 18 Vdc max.

Drop Voltage — 1–9 Vdc

Pickup Time — 15 ms

Dropout Time — 15 ms

#### Coil Current

Inrush — 5 A max. at 28 Vdc and 25°C

Holding — 300 mA max. at 28 Vdc and 25°C

Suppression — 45 Vdc

## K400 Series, Rated up to 400 Amps, 28 Vdc

### Product Facts

- SPST NO, Double break
- Buss bar or chassis mount design
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Coil Type

### Performance Data

#### Electrical Characteristics

- Contact Arrangement** — SPST NO, Double Break
- Rated Operating Voltage** — 28 Vdc
- Resistive Rating** — 400 Amps
- Overload Rating** — 3,200 Amps
- Rupture Rating** — 4,000 Amps

### General Characteristics

- Temperature Range** — -40°C to +85°C
- Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles
- Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles
- Dielectric Strength** — All Circuits to Ground — 1,250 Vrms  
Circuit to Circuit — 1,250 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms
- Altitude, Max.** — 50,000 ft.
- Weight, Max.** — .59 -.75 lbs

### Coil Characteristics

- Duty Cycle** — Economized with suppression (Type A, See diagram below), Continuous (Type B, See diagram below), Intermittent (Type C, See diagram below)
- Operating Voltage, Nom.** — 28 Vdc
- Pickup Voltage @ 250°C, Max.** — 18 Vdc - Economized and continuous duty coil  
12 Vdc - Intermittent duty coil
- Dropout Voltage, Max.** — 7 Vdc - Economized and continuous duty  
5 Vdc - Intermittent duty coil

### Product Facts

- 1.88 to 2 lbs. (854 to 908 grams) depending on style selected
- < 30 cubic inches (490 cm<sup>3</sup>) volume
- 400 A make/carry/break
- 4000 A rupture
- 28 VDC
- One NO and one NC
- Electronically economized to reduce power
- Configuration flexibility
- Multiple mounting options
- -55°C to +70°C operating temperature range
- Meets applicable requirements of MIL-PRF-6106M

### Performance Data

#### Electrical Characteristics

**Main Contacts** —  
**Configuration** — One NO and one NC  
**Voltage** — 28 VDC  
**Current (Resistive Load)** — 400 A  
**Rupture Current** — 4000 A  
**Voltage Drop** — 150 mV max.  
**Auxiliary Contacts** —  
**Configuration** — SPDT  
**Number of Auxiliary Contacts** — 1 to 3  
**Voltage** — 28 VDC  
**Current:**  
 Resistive Load — 5 A  
 Inductive Load — 1 A  
**Bounce** — 5 ms at 28 VDC, 25°C  
**Dielectric Withstand** — 1000 V<sub>rm</sub>

### General Characteristics

**Operating Temperature** — -55°C to +70°C  
**Ground Survivability Temperature** — -55°C to +85°C  
**Altitude** — 55,000 ft.  
**Decompression** — 55,000 ft.  
**Electrical Life** — 50,000 cycles  
**Mechanical Life** — 100,000 cycles  
**Mounting Styles** — Chassis, captive screw, or bus bar  
**Weight** — 1.88 to 2 lb. (854 to 908 g) depending on style

### Coil Characteristics

**Duty Cycle** — Continuous (Electronic Economized)  
**Pickup Voltage** — 18 VDC nom., 20 VDC max. at 85°C  
**Max. Operating Voltage** — 32 VDC  
**Dropout Voltage** — 1.5 to 7 VDC  
**Inrush Current** — 12 A max. (100 ms)  
**Pickup and Dropout Time** — 25 ms at 25°C  
**Suppression** — ±42 V

## K500 Series, Rated up to 500 Amps, 28 Vdc

### Performance Data

#### Electrical Characteristics

**Main Contacts** —  
**Contact Arrangement** — SPST NO, Double Break  
**Rated Operating Voltage** — 28 Vdc  
**Resistive Rating** — 500 Amps  
**Rupture Rating** — 5,000 Amps  
**Auxiliary Contacts** —  
**Aux. Contact Arrangement** — 3 SPDT  
**Rated Operating Voltage** — 28 Vdc  
**Resistive Rating** — 5 Amps  
**Lamp Rating** — 1 Amps  
**Low Level** — 1 mA @ 28 Vdc

#### General Characteristics

**Temperature Range** — -55°C to +85°C  
**Operating Cycles (Life) at Rated Resistive Load** — 50,000 cycles  
**Operating Cycles (Life) Mechanical** — 100,000 cycles  
**Altitude** — 50,000 ft.  
**Weight, Max.** — .88 lbs  
**Operate Time @ 18 Vdc & 85°C, Max.** — 45 msec  
**Dropout Time @ 32 Vdc, Max.** — 25 msec

#### Coil Characteristics

**Duty Cycle** — Continuous, economizing  
**Operating Voltage, Nom.** — 28 Vdc  
**Pickup Voltage, Max.** — 18 Vdc  
**Dropout Voltage** — 1 to 7 Vdc  
**Inrush** — 5 Amps  
**Hold @ 32 Vdc & -55°C** — 0.272 mA max.

### Product Facts

- SPST NO, Double break
- Buss bar or chassis mount designs
- Gasket sealed
- Multiple auxiliary contact choices
- Meets many requirements of MIL-PRF-6106

### Coil Type

A — Economized with Suppression

## K Series, Rated up to 500 Amps, 28 Vdc — Time Delay

### Product Facts

- SPST NO, Double break
- Delay on operator or release
- Chassis Mount (bus bar mount available)
- Gasket sealed
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

- Contact Arrangement** — SPST NO, Double Break
- Rated Operating Voltage** — 28 VDC
- Resistive Rating** — 500A
- Rupture Rating** — 5000A
- Delay on operate or release** — See note 1

#### General Characteristics

- Temperature Range** — -55°C to +85°C
- Minimum Electrical Cycles** — 50,000
- Minimum Mechanical Cycles** — 100,000 @ 125A
- Dielectric Strength** — 1000 Vrms
- Altitude** — 50,000 ft
- Weight, Max.** — 1.0 lbs
- Duty Cycle** — Intermittent or Continuous (See note 2)
- Operating Voltage Range** — 21 - 32 Vdc
- Drop Out Voltage** — 1 to 7 Vdc

### NOTES

1. Delay can be tailored to meet customer need. Consult Factory.
2. Intermittent duty coil is recommended for starting applications where significant control voltage sags are possible. Consult factory to specify correct coil duty for your application.

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## K-1000 Series, Rated up to 1,000 Amps, 28 Vdc

### Product Facts

- SPST NO, Double break
- Gasket sealed
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — SPST NO, Double Break

**Rated Operating Voltage** — 28 Vdc

**Resistive Rating** — 1,000 Amps

#### General Characteristics

**Temperature Range** —

-55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load** — 50,000 cycles

**Operating Cycles (Life) Mechanical** — 100,000 cycles

**Weight, Max.** — 2.75 lbs

#### Coil Characteristics

**Duty Cycle** — Continuous, economizing

**Operating Voltage, Nom.** — 28 Vdc

**Pickup Voltage, Max. @25°C** — 18 Vdc

**Dropout Voltage** — 1 to 8 Vdc

**Current, Inrush, Max. @ 30 Vdc** — 7.0 Amps

**Current, Hold, Max. @ 30 Vdc** — 1.0 Amps

Mounting Style A

**Circuit Configurations** (Consult factory for other available circuit configurations)

DH-14 and DH-21 Series, Rated up to 25 Amps, 28 Vdc

Product Facts

- SPDT, 1 NO, 1 NC, Double Break
- Hermetically Sealed
- DH21 Series has magnetically latched contacts
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

**Contact Arrangement** — SPDT, 1 NO, 1 NC, Double Break  
**Rated Operating Voltage** — 28 Vdc  
**Resistive Rating** — 25 Amps  
**Inductive Rating** — 25 Amps  
**Motor Rating** — 15 Amps

General Characteristics

**Temperature Range** — -55°C to +71°C  
**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles  
**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles  
**Dielectric Strength** — All Circuits to Ground — 1,250 Vrms  
 Circuit to Circuit — 1,250 Vrms  
 Coil to Ground and Aux. Contacts — 1,000 Vrms  
**Altitude Max.** — 80,000 ft.  
**Weight** — .39 lbs

Coil Characteristics

**Duty Cycle** — Continuous (Type A, See diagram below), Continuous with suppression (Type B, See diagram below) or Intermittent (Type C)  
**Operating Voltage, Nom.** — 28 Vdc  
**Pickup Voltage @ 25°C, Max.** — 18 Vdc  
**Dropout Voltage @ 25°C, Max.** — 1.0 to 7 Vdc

Coil Type

A — Continuous

B — Continuous with Suppression

C — Intermittent

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

\*DH21N is a magnetically latched unit. Contacts will remain in position until the opposing coil is pulsed.

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## D-7, DH-7 and DH-18 Series, Rated up to 50 Amps, 28 Vdc

### Product Facts

- 2 SPST, 1 NO, 1 NC
- DH-18 Series are center-off double-throw units
- Gasket Sealed or Hermetically Sealed
- Auxiliary contacts available
- Meets many requirements of MIL-R-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — 2 SPST, 1 NO, 1 NC, Electrically Latched  
**Rated Operating Voltage** — 28 Vdc  
**Resistive Rating** — 50 Amps  
**Inductive Rating** — 25 Amps

#### General Characteristics

**Temperature Range** — -55°C to +71°C  
**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles  
**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles  
**Dielectric Strength** — All Circuits to Ground — 1,500 Vrms  
 Circuit to Circuit — 1,500 Vrms  
 Coil to Ground and Aux. Contacts — 1,000 Vrms  
**Altitude Max.** — 50,000 ft.  
**Weight** — .72 to .94 lbs

#### Coil Characteristics

**Duty Cycle** — Continuous (Type A, See diagram below) or Continuous with suppression (Type B, See diagram below) or Continuous (Type C)  
**Operating Voltage, Nom.** — 28 Vdc  
**Pickup Voltage @ 25°C, Max.** — 18 Vdc  
**Dropout Voltage @ 25°C, Max.** — 1.5 to 7 Vdc  
**Coil Current @ 25°C, Max.** — 0.28 Amp

### Coil Type

A — Continuous

B — Continuous with Suppression

C — Continuous

## A876 Series, Rated up to 200 Amps, 28 Vdc

### Product Facts

- SPST NC, Double Break
- Gasket Sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

##### Main Contacts —

**Main Contact Configuration —**  
SPST NC, Double Break

**Rated Operating Voltage —**  
28 Vdc

**Resistive Rating —** 200 Amps

**Inrush, Carry Only —** 900 Amps

##### Auxiliary Contacts —

**Aux. Contact Configuration —**  
DPST NO

**Voltage, Nom. —** 28 Vdc

**Resistive Rating —** 5 Amps

#### General Characteristics

**Temperature Range —**  
-55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load, Min. —** 50,000 cycles

**Operating Cycles (Life) Mechanical, Min. —** 100,000 cycles

**Dielectric Strength —**  
All Circuits to Ground — 1,250 Vrms  
Circuit to Circuit — 1,250 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms

**Weight —** 3.00 lbs

#### Coil Characteristics

**Duty Cycle —** Intermittent

**Operating Voltage —** 24 to 30 Vdc

**Pickup Voltage, Max. —** 18 Vdc

**Dropout Voltage —** 1 to 7 Vdc

**Coil Resistance ± 20% @ 25°C —**  
19.7 Ohms

Mounting Style A

## A1077 Series, Rated up to 230 Amps, 28 Vdc

### Product Facts

- Gasket Sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** —  
SPST NO, Double Break or  
SPDT Double Break

**Rated Operating Voltage** —  
28 Vdc

**Resistive Rating** — 230 Amps

**Inrush Rating** — 600 Amps

#### General Characteristics

**Temperature Range** —  
-55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Dielectric Strength** —  
All Circuits to Ground — 1,250 Vrms  
Circuit to Circuit — 1,250 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms

**Weight** — 1.90 lbs

#### Coil Characteristics

**Duty Cycle** — Continuous

**Operating Voltage, Max.** —  
30 Vdc

**Operating Voltage, Nom.** —  
24 Vdc

**Pickup Voltage @ 25°C, Max.** —  
16.5 Vdc

**Dropout Voltage** — 0.5 to 7 Vdc

### A-770 and AR-770 Series, Rated up to 300 Amps, 28 Vdc

#### Product Facts

- SPST NO, Double Break
- Gasket Sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

#### Performance Data

##### Electrical Characteristics

**Contact Arrangement** — SPST NO, Double Break

**Rated Operating Voltage** — 28 Vdc

**Resistive Rating** — 300 Amps

**Motor Load** — 300 Amps

**Rupture Rating** — 3,000 Amps

##### General Characteristics

**Temperature Range** — -55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Dielectric Strength** — All Circuits to Ground — 1,250 Vrms  
Circuit to Circuit — 1,250 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms

**Altitude Max.** — 50,000 ft.

**Weight** — 2.00 lbs

##### Coil Characteristics

**Duty Cycle** — DC Continuous or Intermittent or Continuous or Intermittent with suppression

**Operating Voltage, Nom.** — 28 Vdc

**Pickup Voltage @ 25°C, Max.** — 16 Vdc

**Dropout Voltage @ 25°C** — 1.5 to 5 Vdc

**Coil Current, Max., Holding** — Coil Type A — 0.4 Amp  
Coil Type B — 0.625 Amp

## A-848 Series, Rated up to 300 Amps, 24/48 Vdc

### Product Facts

- SPST NO, DPST NC, Double break
- Gasket sealed
- Meets many requirements of MIL-PRF-6106
- Designed for series/parallel starting systems

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — SPST NO, DPST NC, Double Break

**Rated Operating Voltage** — 24/48 Vdc

**Resistive Rating** — 300 Amps

**Inrush for 30 sec** — 1,100 Amps

**Inrush** — 700 Amps

#### General Characteristics

**Temperature Range** — -55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Dielectric Strength** —  
 All Circuits to Ground — 1,250 Vrms  
 Circuit to Circuit — 1,250 Vrms  
 Coil to Ground and Aux. Contacts — 1,000 Vrms

**Weight** — 3.5 lbs

#### Coil Characteristics

**Duty Cycle** — Intermittent

**Operating Voltage, Max.** — 31 Vdc

**Operating Voltage, Min.** — 18 Vdc

**Pickup Voltage @ 25°C, Max., Initial** — 12 Vdc

**Dropout Voltage** — 1.5 to 7 Vdc

Mounting Style A

### AH-965 Series, Rated up to 300 Amps, 30 Vdc

#### Product Facts

- SPDT NO, SPST NC
- Hermetically sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

#### Performance Data

##### Electrical Characteristics

###### Contact Arrangement —

SPDT, Double Break

###### Rated Operating Voltage —

30 Vdc

###### Resistive Rating — 300 Amps

Carry Only for 30 sec — 1,000 Amps

Carry Only, Inrush — 1,500 Amps

Rupture Rating — 3,000 Amps

##### General Characteristics

###### Temperature Range —

-65°C to +120°C

###### Operating Cycles (Life) at Rated

Resistive Load, Min. — 50,000 cycles

###### Operating Cycles (Life)

Mechanical, Min. — 100,000 cycles

###### Dielectric Strength —

All Circuits to Ground — 1,250 Vrms

Circuit to Circuit — 1,250 Vrms

Coil to Ground and Aux. Contacts —

1,000 Vrms

Altitude, Max. — 50,000 ft.

Weight, Max. — 2.88 lbs

##### Coil Characteristics

Duty Cycle — Intermittent, 3 minutes max.

Operating Voltage, Max. — 30 Vdc

Pickup Voltage, Max. Hot — 20 Vdc

Dropout Voltage — 0.5 to 5 Vdc

## A-981 Series, Rated up to 400 Amps, 28 Vdc

### Product Facts

- SPDT, Double break or SPST NO, SPST NC
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — SPDT, Double Break or SPST NO, SPST NC

**Rated Operating Voltage** — 28 Vdc

**Resistive Rating** — 400 Amps

**Inrush for 30 sec** — 1,000 Amps

**Inrush** — 1,500 Amps

### General Characteristics

**Temperature Range** — -55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles

**Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles

**Dielectric Strength** — All Circuits to Ground — 1,250 Vrms  
Circuit to Circuit — 1,250 Vrms  
Coil to Ground and Aux. Contacts — 1,000 Vrms

**Weight, Max.** — 3.2 lbs

### Coil Characteristics

**Duty Cycle** — Continuous with suppression

**Operating Voltage, Max.** — 31 Vdc

**Operating Voltage, Min.** — 17 Vdc

**Pickup Voltage, Max.** — 18 Vdc

**Dropout Voltage @ 25°C** — 1 to 10 Volts

**Coil Current, Inrush, Max.** — 4.5 Amp

## A-981 Series, Rated up to 400 Amps, 28 Vdc (Continued)

A-981P	Gasket/Vented	B	Continuous, Economizing w/Supp.	2	1616083-6

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## A-792 Series, Rated up to 500 Amps, 50 Vdc

### Product Facts

- SPST NO, Quad. break
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

##### Main Contacts —

**Contact Arrangement** — SPST NO, Quad. Break

**Rated Operating Voltage** — 50 Vdc

**Resistive Rating** — 500 Amps

##### Auxiliary Contacts —

**Aux. Contact Arrangement** — SPDT, SPST NC

**Rated Operating Voltage** — 38 Vdc

**Resistive Rating** — 5 Amps

#### General Characteristics

**Temperature Range** — -55°C to +71°C

**Operating Cycles (Life) at Rated Resistive Load** — 50,000 cycles

**Operating Cycles (Life) Mechanical** — 100,000 cycles

**Weight, Max.** — 4 lb 8 oz.

#### Coil Characteristics

**Duty Cycle** — Continuous, economizing

**Operating Voltage, Nom.** — 35-39 Vdc

**Pickup Voltage @ 25°C, Max.** — 20 V

**Resistance @ 25°C** —  
Pickup — 27 Ohm ± 20%  
Hold — 111 Ohm ± 20%

**Suppression, Peak, Max.** — 50 V

Mounting Style A

**Circuit Configurations** (Consult factory for other available circuit configurations)

Circuit Configuration 1

## A-712 Series, Rated up to 600 Amps, 28 Vdc

### Product Facts

- SPST NO, Double break
- Gasket sealed
- Meets requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — SPST NO, Double Break  
**Rated Operating Voltage** — 28 Vdc  
**Resistive Rating** — 600 Amps

#### General Characteristics

**Temperature Range** — -55°C to +71°C  
**Operating Cycles (Life) at Rated Resistive Load** — 50,000 cycles  
**Operating Cycles (Life) Mechanical** — 100,000 cycles  
**Dielectric Strength** — All Circuits to Ground — 1,250 Vrms  
 Circuit to Circuit — 1,250 Vrms  
 Coil to Ground and Aux. Contacts — 1,000 Vrms  
**Weight, Max.** — 3.00 lbs - 3 lbs 7 oz.

#### Coil Characteristics

**Duty Cycle** — Continuous or Intermittent  
**Operating Voltage, Max.** — 29 Vdc  
**Coil Voltage, Nom.** — 24-28 Vdc  
**Pickup Voltage, Max.** — 18 Vdc  
**Dropout Voltage** — 1 to 5 Vdc  
**Coil Current, Hold, Max.** — 0.6 Amp

Mounting Style A

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## A-882 Series, Rated up to 600 Amps, 28/48 Vdc

### Product Facts

- 2PDT, Double break
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

##### Main Contacts —

##### Contact Arrangement —

2PDT, Double Break

##### Rated Operating Voltage —

28/48 Vdc

##### Resistive Rating — 600 Amps

Resistive for 30 sec — 1,000 Amps

Motor Rating — 1,500 Amps, Inrush only

##### Auxiliary Contacts —

##### Aux. Contact Arrangement —

SPST NO

##### Resistive Rating — 5 Amps

Inductive Rating — 5 Amps

#### General Characteristics

##### Temperature Range —

-65°C to +160°C

##### Operating Cycles (Life) at Rated

Resistive Load, Min. — 50,000 cycles

##### Operating Cycles (Life)

Mechanical, Min. — 100,000 cycles

##### Dielectric Strength —

All Circuits to Ground — 1,250 Vrms

Circuit to Circuit — 1,250 Vrms

Coil to Ground and Aux. Contacts — 1,000 Vrms

Altitude, Max. — 50,000 ft

Weight — 8.75 lbs

#### Coil Characteristics

Duty Cycle — Intermittent

Operating Voltage, Max. — 29 Vdc

Operating Voltage, Min. — 18 Vdc

Pickup Voltage, Max., Hot — 18 Vdc

Dropout Voltage, Max., Hot — 7 Vdc

Coil Current, Max. @ 70°F —

8 Amps

Coil Current, Max. @ -65°F —

9.6 Amps

Mounting Style A

## A-931 Series, Rated up to 600 Amps, 28 Vdc

### Product Facts

- SPST NC, Double break
- Gasket sealed
- Auxiliary contacts available
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

- Main Contacts** —
- Contact Arrangement** — SPST NC, Double Break
- Rated Operating Voltage** — 28 Vdc
- Resistive Rating** — 600 Amps
- Inrush for 30 sec** — 1,000 Amps
- Inrush for 5 min** — 800 Amps
- Auxiliary Contacts** —
- Aux. Contact Arrangement** — DPST
- Rated Operating Voltage** — 28 Vdc
- Resistive Rating** — 5 Amps

#### General Characteristics

- Temperature Range** — -55°C to +71°C
- Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles
- Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles
- Dielectric Strength** —
- All Circuits to Ground — 1,250 Vrms
- Circuit to Circuit — 1,250 Vrms
- Coil to Ground and Aux. Contacts — 1,000 Vrms
- Weight, Max.** — 3.00 lbs

#### Coil Characteristics

- Duty Cycle** — Continuous, economizing
- Operating Voltage, Max.** — 30 Vdc
- Operating Voltage, Min.** — 18 Vdc
- Pickup Voltage, Initial, Max. @ 71°C** — 10 Vdc
- Dropout Voltage** — 1 to 7 Vdc
- Resistance, Inrush ± 20% @ 25°C** — 3 Ohm
- Resistance, Hold ± 20% @ 25°C** — 80 Ohm

Mounting Style A

**E-328-2 Series AC Low Voltage Warning Relay, 10 Amps, 28 Vdc Contacts**

**Product Facts**

- DPDT
- Gasket sealed

**Performance Data**

**Electrical Characteristics**

- Relay/Relay Driver**  
 Contact Arrangement — DPDT  
 Rated Operating Voltage — 28 Vdc  
 Resistive Rating — 10 Amps  
 Inductive Rating — 5 Amps  
 Lamp Rating — 1.5 Amps

**Coil Characteristics**

Duty Cycle — Continuous

**Voltage Sensor**

- Operating Voltage, Nom. — 115 V, 380-420 Hz  
 Pickup Voltage —  $107 \pm 3$  Vrms  
 Dropout Voltage —  $100 \pm 2$  Vrms  
 Dropout Time, Min. — 40 msec

**General Characteristics**

- Temperature Range —  $-55^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$   
 Operating Cycles (Life) Mechanical, Min. — 100,000 cycles  
 Weight, Max. — 6 oz.

Mounting Style A

**Circuit Configurations** (Consult factory for other available circuit configurations)

Circuit Configuration 1

## A-772 Series Battery Contactor — Discharge Overload, Rated up to 200 Amps, 28 Vdc

### Product Facts

- SPST NO
- Gasket sealed
- Auxiliary contacts available
- Limits overload current duration

### Performance Data

#### Electrical Characteristics

- Main Contacts —**
- Contact Arrangement —** SPST NO
- Rated Operating Voltage —** 28 Vdc
- Resistive Rating —** 200 Amps
- Auxiliary Contacts —**
- Aux. Contact Arrangement —** SPST NC
- Rated Operating Voltage —** 28 Vdc
- Resistive Rating —** 5 Amps

#### General Characteristics

- Temperature Range —** -55°C to +71°C
- Operating Cycles (Life) at Rated Resistive Load —** 50,000 cycles
- Operating Cycles (Life) Mechanical —** 100,000 cycles
- Electrical —** 50,000 min.
- Weight, Max. —** 2 lbs. 13 oz.

#### Coil Characteristics

- Duty Cycle —** Continuous
- Operating Voltage, Max. —** 30 V
- Operating Voltage, Min. —** 24 V
- Pickup Voltage @ 25°C, Max. —** 16 V
- Dropout Voltage —** 1 to 7 V
- Overload Sensor**
- Type —** Latching
- Polarized —** Discharge
- Trip —** 300 Amps ± 10%
- Time Delay —** 900 to 1,100 msec

#### Sensor Contacts, Aux.

- Sensor Contact Arrangement —** SPST NO
- Rated Operating Voltage —** 28 Vdc
- Resistive Rating —** 3 Amps
- Reset Rating, Max. —** 18 V

Mounting Style A

### Circuit Configurations (Consult factory for other available circuit configurations)

Circuit Configuration 1

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
A-772XTB	Gasket/Vented	A	Continuous	1	1616545-1

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

**E-387 Series Current Sensor, Rated up to 25 Amps, 28 Vdc**

**Product Facts**

- SPDT
- Gasket sealed
- Meets many requirements of MIL-PRF-6106

**Performance Data**

**Electrical Characteristics**  
**Indicator Contact Arrangement** — SPDT  
**Rated Operating Voltage** — 28 Vdc  
**Resistive Rating** — 1 Amp

**General Characteristics**

**Dielectric Strength** — 1,000 Vrms, 60 Hz  
**Insulation Resistance @ 500 Vdc & 20°C & 50% R.H. (Max.)** — 1,000 megohm min.  
**Weight, Max.** — 8 oz

**Coil Characteristics**

**Duty Cycle** — Continuous  
**Control Power** — 28 Vdc  
**Sensor Input** — 400 Hz ± 100 Hz  
**Pickup Current** — 14 ± 2 Amps  
**Dropout Current** — 7 ± 1 Amp  
**Continuous Sensor Current** — 25 Amp, max.

**Mounting Style A**

**Circuit Configurations** (Consult factory for other available circuit configurations)

## A-702 Series Cutout — Reverse Current, Rated up to 600 Amps, 28 Vdc

### Product Facts

- SPST NO
- Gasket sealed

### Performance Data

#### Electrical Characteristics

- Contact Arrangement** — SPST NO, Double Break
- Rated Operating Voltage** — 28 Vdc
- Resistive Rating** — 600 Amps
- Reverse Current Dropout** — 18 to 35 Amps
- Differential Pickup** —  $.5 \pm .15$

### General Characteristics

- Temperature Range** —  $-55^{\circ}\text{C}$  to  $+71^{\circ}\text{C}$
- Operating Cycles (Life) at Rated Resistive Load, Min.** — 50,000 cycles
- Operating Cycles (Life) Mechanical, Min.** — 100,000 cycles
- Electrical** — 50,000 min.
- Dielectric Strength** — All Circuits to Ground — 1,250 Vrms  
Circuit to Circuit — 1,250 Vrms

Coil to Ground and Aux. Contacts — 500 Vrms

**Weight, Max.** — 3.9 lbs.

### Coil Characteristics

- Duty Cycle** — Continuous
- Duty Cycle when using "APP"** — Continuous
- Nom. Coil Voltage** — 24 to 30 Vdc
- Pickup Voltage, Max.** — 18 Vdc
- Dropout Voltage** — 0.5 to 7.0 Vdc

Mounting Style A

### Circuit Configurations (Consult factory for other available circuit configurations)

Circuit Configuration 1

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
A-702AAP	Gasket/Vented	A	Continuous	1	1-1616109-3

**B-188 Series External Power Monitor, 115 VAC, 400 Hz**

**Product Facts**

- SPST
- Gasket Sealed
- Over/under frequency protection
- Over/under voltage protection
- Dust tight

**Performance Data**

**Electrical Characteristics**

**Contact Arrangement** — SPST

**Rated Operating Voltage** — 115 VAC/28 Vdc, 3 phase, 400 Hz

**Resistive Rating** — 3 Amps

**General Characteristics**

**Operating Temperature Range** — -54°C to +71°C

**Dielectric Strength** — Leakage current will not exceed .001 Amps when unit is subjected to test of Para. 4.6.2 of MIL-E-24021A

**Altitude** — 0-40,000 ft

**Weight, Max.** — .75 lb

**Sinusoidal Vibration** —

5-15.5 CPS ±0.13 G,  
15.5-54 CPS 0.01 inch DA,  
54-500 CPS ± 1.5 G

**Shock, Max.** — 10 G 30 ± 1 ms

**Operation** — Contacts will remain as shown (off condition) until input power is anywhere within the "on" zone. Contacts will revert to off condition whenever input voltage and/or frequency is above the high side or below the low side "off". Limits for time intervals exceeding the transient period.

**Limits** —

"On" zone —  
"On" zone voltage limits 100 to 120 volts rms all phases  
"On" zone frequency limits 380 to 420 CPS

"Off" limits —  
High side voltage "off" limits — 131 ± 5 volts 3 Ø (highest of 3Ø)  
High side frequency "off" limits — 425 ± 5 CPS  
Low side frequency "off" limits — 375 ± 5 CPS

**Voltage Transient Limits** —  
High Side — above limit 2 but below limit 1 of Fig. 2 MIL-STD-704, 3Ø (highest of 3Ø)  
Low Side — below limit 3 Fig. 2 MIL-STD-704

Over and Under frequency time delay 3 ± 1 sec.  
Output rating SPST 3 AMP Ind. 28 V DC/115 V 400 CPS

Mounting Style A

## Q-50 Series Relay, Current Indicator, Rated up to 20 Amps, 28 Vdc

### Product Facts

- SPST NC or SPST NO
- Environmentally sealed
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** —  
SPST NC, SPST NO or SPDT

**Contact Rating @ 28 Vdc** —

- Q-50AB-2 — 0.2 Amp
- Q-50J — 0.25 Amp
- Q-50AG — 1.0 Amp
- Q-50AB-1 — 1 Amp switching, and 2 Amps carry
- Q50AC — 2 Amp

**Lamp Load @ 28 Vdc** —

- Q-50AC, Q-50AB-2 — 0.08 Amp
- Q-50J, Q-50AG — 0.20 Amp

**Operating Voltage, Nom.** — 28 Vdc

**Sensing Current Rating** —

- 20 Amps continuous, max. except for Q-50AB-1 and Q-50AB-2 which are 10

Amps max. and 15 Amps max. for 3 sec.

Q50AC 2 Amps continuous 10 Amps max. for 5 seconds

**Pickup Max.** —

- Q-50AC — 0.3 Amp
- Q-50AB-1, Q-50AB-2 — 1.5 Amp
- Q-50J — 3.5 Amps DC
- Q-50AG — 6 Amps DC ± 20%

**Dropout Min.** —

- Q-50AC — 0.1 Amp
- Q-50J — 0.5 Amp
- Q-50AB-1, Q-50AB-2 — less than 1 Amp
- Q-50AG — 2.4 Amp

### General Characteristics

**Temperature Range** —  
-55°C to +71°C

**Altitude, Max.** —

- Q-50J, Q-50AB-1 — 50,000 ft
- Q-50AC, Q-50AG, Q-50AB-2 — 60,000 ft

**Weight, Max.** — 1.25 oz

Mounting Style A

Mounting Style B

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

E-311PB Series Relay, Undervoltage with Time Delay

Product Facts

- 2PDT
- Solder sealed, hermetically sealed
- Meets many requirements of MIL-PRF-6106

Performance Data

Electrical Characteristics

- Main Contacts —
- Contact Arrangement — 2PDT
- Operating Voltage, Nom. — 28 Vdc
- Resistive Rating — 10 Amps
- Inductive Rating — 6 Amps
- Motor Rating — 3 Amps
- Lamp Rating — 1 Amps
- Pickup Time, Max. — 125 msec
- Contact Bounce, Max. — 3 msec
- Operating Voltage, Max. — 36 Vdc
- Operating Voltage, Nom. — 28 Vdc
- Pickup Voltage — 24.5 ± 0.5 Vdc
- Dropout Voltage — 21.5 ± 0.5 Vdc
- Dropout Time Delay — 200-400 milliseconds when the relay is in the energized position and the voltage drops below 21.5 ± 0.5 Vdc and above 15 Vdc. The relay will remain energized for 200 to 400 milliseconds before de-energizing when the voltage drops below 15 Vdc. Time delay is 30 Ms max.
- Operating Current, Max. @ 25°C — 150 milliamp

General Characteristics

- Ambient Temperature Range — -55°C to +85°C
- Operating Cycles (Life) at Rated Resistive Load, Min. — 100,000 cycles
- Dielectric Withstanding Voltage — 1,000 Vrms, 60 Hz, 1 mil/Amp max. leakage
- Insulation Resistance @ 500 Vdc — 100 megohm min.
- Altitude — 80,000 ft
- Weight, Max. — .25 lbs
- Sinusoidal Vibration — .060 DA @ 5 to 80 Hz  
20 G<sup>TM</sup> 80 to 2000 Hz
- Shock for 11 msec, 1/2 Sine, 3 Axes — 30 G

Mounting Style A

Circuit Configurations (Consult factory for other available circuit configurations)

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## E-329 Series Relay, Voltage Sensing

### Product Facts

- 3PDT
- Solder sealed cover, hermetically sealed contacts
- Meets many requirements of MIL-PRF-6106

### Performance Data

#### Electrical Characteristics

**Contact Arrangement** — 3PDT

**Rated Operating Voltage** — 28 Vdc, and 155 Vac 400 Hz

**Resistive Rating** — 10 Amps

**Inductive Rating** — 8 Amps

**Motor Rating** — 4 Amps

**Lamp Rating** — 2 Amps

**Pickup Time, Max.** — 70 msec

**Contact Bounce, Max.** — 3 msec

**Dropout Time Delay** —

200-400 msec when the relay is in the energized position and the voltage drops below  $104 \pm 2$  Vrms and above  $88 \pm 4$  Vrms. The relay will remain energized for 200-400 msec before deenergizing. When the voltage drops below  $88 \pm 4$  Vrms no time delay is required. When the voltage drops to 30 volts or less the relay will de-energize 50 msec max.

**Operating Voltage, Nom.** —

115 VAC, RMS L-N

**Operating Voltage, Max.** —

122 VAC, RMS L-N

**Operating Frequency** —  $400 \pm 20$  Hz

**Pickup Voltage** —  $109 \pm 2$  Vrms

**Dropout Voltage** —  $104 \pm 2$  Vrms

**Operating Current, Max. @ 25°C** —

100 milliamp

#### General Characteristics

**Temperature Range** —

$-55^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$

**Operating Cycles (Life) at Rated Resistive Load, Min.** —

100,000 cycles

**Operating Cycles (Life) Mechanical, Min.** —

100,000 cycles

**Dielectric Withstanding Voltage** —

1,000 Vrms, 60 Hz

**Insulation Resistance @ 500 Vdc** —

1,000 megohm min.

**Altitude** — 0-80,000 ft

**Weight, Max.** — 10 oz

**Shock for 11 msec, 1/2 Sine,**

**3 Axis** — 30 G

Mounting Style A

**Electrical Characteristics**

Contact Arrangement — DPDT  
 Operating Voltage, Nom. — 28 Vdc  
 Resistive Rating — 10 Amps  
 Inductive Rating — 2 Amps

**General Characteristics**

Operating Ambient Temperature Range — -55°F to +165°F  
 Altitude — 50,000 ft  
 Weight, Max. — 15.5 oz

**Coil Characteristics**

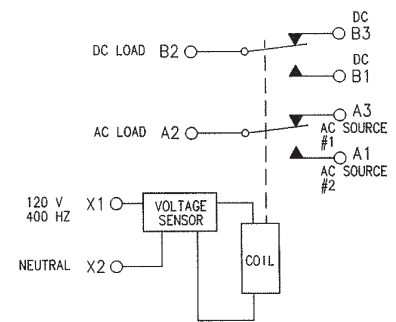

Duty Cycle — Continuous  
 Input to Sensor, Nom. — 120 V, 400 Hz

**Operating Characteristic** —  
 Contacts A1-A2, B1-B2 will close if the AC input voltage is above  $106 \pm 2$  VAC  
 Contacts A1-A2, B1-B2 will open if the AC input voltage falls below  $106 \pm 2$  VAC.

Mounting Style A

**Circuit Configurations** (Consult factory for other available circuit configurations)

Circuit Configuration 1

HARTMAN Part Number	Construction Type	Mounting Style	Coil Type	Circuit Config.	TE Part Number
E-308TA	Gasket/Vented	A	Continuous	1	1616126-6

For factory-direct application assistance, phone 419-521-9500 or fax 419-526-2749.

## KILOVAC MAP101 Series Contactor with 1 Form A (SPST-NO) Contacts Rated up to 100 Amps, 12-900 Vdc Dual Contact Material (Cu/Mo)

### Product Facts

- Dual contact material (copper/moly) designed for high current make and interrupt military aerospace, ground vehicle and naval applications
- Hermetically sealed, intrinsically safe, operates in explosive/harsh environments with no oxidation or contamination of coils or contacts, during long periods of non-operation
- Comes standard with 1 SPST-NO Aux. contact
- Not position sensitive, can be mounted in any orientation
- RoHS versions available

### Physical Data

**Contact Arrangement** —  
Main Contacts —  
SPST-Latching (form X)  
1X Auxiliary Contact —  
SPST-NO (form A)

**Dimensions** — See drawing

**Weight, Nominal** —  
0.35 Kg (12.35 oz)

### Environmental Data

**Shock, 11ms 1/2 Sine (Operating)** — 20 G<sub>peak</sub>

**Sine Vibration, 20 G<sub>peak</sub>** —  
55-2000 Hz

**Random Vibration, 14.06 Grms** —  
15 Hz (.002 G<sup>2</sup>/Hz), 100 Hz (.002 G<sup>2</sup>/Hz),  
450 Hz (.12 G<sup>2</sup>/Hz), 900 Hz (.12 G<sup>2</sup>/Hz),  
2000 Hz (.083 G<sup>2</sup>/Hz)

**Operating Temperature Range** —  
-55°C to +85°C

### Electrical Data

**Voltage Rating** —  
Main Contacts (max) — 400 Vdc  
Auxiliary Contacts — 30 Vdc

**Current Rating, Continuous** —  
Main Contacts <sup>1</sup> — 100 A  
Auxiliary Contacts — 3 A

**Contact Resistance** —  
Main Contacts —  
100 mΩ max @ 1 amp  
0.75 mΩ max @ rated current  
Auxiliary Contacts —  
200 mΩ max

**Electric Life at Rated Current 270 Vdc, Resistive Load** —  
25,000 cycles

**Mechanical Life** — 1 million cycles

**Dielectric Withstand Voltage** —  
Terminal to Terminal/ Terminals to Coil  
— 1mA max @ 1,300Vrms

**Insulation Resistance** —  
Terminal to Terminal/ Terminals to Coil  
—  
100MΩ min @ 500Vdc new  
50MΩ min @ 500Vdc end of life

### Note:

<sup>1</sup> Continuous current rating is affected by conductors attached. Keep terminals below 150°C max continuous.

### Coil Data

**Coil Voltage, Nominal/ Max** —  
28/ 32 Vdc

**Coil Resistance @ 25°C** —  
Contacts Close Coil — 18 Ω  
Contacts Open Coil — 13 Ω

**Pick Up/ Drop Out (Max)** —  
16 Vdc (-55°C to +25°C)  
18 Vdc (+25°C to +85°C)

**Coil Current (Max) @ 32Vdc/ -40°C** — 4.0 A

**Coil Current On Time (Minimum Required to Latch)** — 40 ms

**Main Contacts** —  
Operate Time (Max) — 40 ms  
Operate Bounce (Max) — 5 ms  
Release Time — 25 ms

**Auxiliary Contacts Operate/ Release** — Within ± 5 ms of main

## KILOVAC MAP100 Series Contactor with 1 Form A (SPST-NO) Contacts Rated up to 100 Amps, 12-900 Vdc

### Product Facts

- Solid copper contacts designed for high current carry military aerospace, ground vehicle and naval applications
- Hermetically sealed, intrinsically safe, operates in explosive/harsh environments with no contact oxidation or contamination of coil or contacts, during long periods of non- operation
- Comes standard with 1 SPST-NO Aux. contact
- Not position sensitive, can be mounted in any orientation
- RoHS versions available

### Physical Data

**Contact Arrangement** —  
Main Contacts —  
SPST-Latching (or NO Form X)  
1X Auxiliary Contact —  
SPST-NO (form A)

**Dimensions** — See drawing

**Weight, Nominal** —  
0.35 Kg (12.35 oz)

### Environmental Data

**Shock, 11ms 1/2 Sine (Operating)** — 20 G<sub>peak</sub>

**Sine Vibration, 20 G<sub>peak</sub>** —  
55-2000 Hz

**Random Vibration, 14.06 Grms** —  
15 Hz (.002 G<sup>2</sup>/Hz), 100 Hz (.002 G<sup>2</sup>/Hz),  
450 Hz (.12 G<sup>2</sup>/Hz), 900 Hz (.12 G<sup>2</sup>/Hz),  
2000 Hz (.083 G<sup>2</sup>/Hz)

**Operating Temperature Range** —  
-55°C to +85°C

### Electrical Data

**Voltage Rating** —  
Main Contacts (max) — 400 Vdc  
Auxiliary Contacts — 30 Vdc

**Current Rating, Continuous** —  
Main Contacts <sup>1</sup> — 100 A  
Auxiliary Contacts — 3 A

**Contact Resistance** —  
Main Contacts —  
100 mΩ max @ 1 amp  
0.75 mΩ max @ rated current  
Auxiliary Contacts —  
200 mΩ max

**Electrical Life at Rated Current, 270 Vdc, Resistive Load** —  
15,000 cycles

**Mechanical Life** — 1 million cycles

**Dielectric Withstand Voltage** —  
Terminal to Terminal/ Terminals to Coil  
— 1mA max @ 1,300Vrms

**Insulation Resistance** —  
Terminal to Terminal/ Terminals to Coil  
—  
100MΩ min @ 500Vdc new  
50MΩ min @ 500Vdc end of life

### Note:

<sup>1</sup> Continuous current rating is affected by conductors attached. Keep terminals below 150°C max continuous.

### Coil Data

**Coil Voltage, Nominal/ Max** —  
28/ 32 Vdc

**Coil Resistance @ 25°C** —  
Contacts Close Coil — 18 Ω  
Contacts Open Coil — 13 Ω

**Pick Up/ Drop Out (Max)** —  
16 Vdc (-55°C to +25°C)  
18 Vdc (+25°C to +85°C)

**Coil Current (Max) @ 32Vdc/ -40°C** — 4.0 A

**Coil Current On Time (Minimum Required to Latch)** — 40 ms

**Main Contacts** —  
Operate Time (Max) — 40 ms  
Operate Bounce (Max) — 5 ms  
Release Time — 25 ms

**Auxiliary Contacts Operate/ Release** — Within ± 5 ms of main

## KILOVAC CAP202 Series Aerospace Commercial Contactor with 2 Form X (DPST-NO), Contacts Rated up to 300 Amps, 12-600 Vdc

### Product Facts

- Hermetically sealed
- Up to 4X SPDT auxiliary switch outputs: 30 Vdc/2A max switching or 6V/5mA min. signal
- Integrated coil economizer with coil suppression
- EMC compliant - no radiated coil emission
- Bidirectional switching - main contacts not polarity sensitive
- Mount in any orientation -not position sensitive

### Description

2-pole single throw hermetically sealed DC contactor; 12-900 Vdc/350A per pole

Not position sensitive

Bi-directional switching

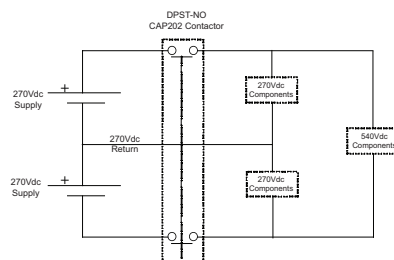

### Applications

High Voltage DC Converter Systems (ref schematic below)

Test Equipment

Power Distribution

Power Motion Control

### Electrical

Compact epoxy-sealed resin enclosure occupies only about 4 in<sup>3</sup> (65.5 cm<sup>3</sup>)

Contact arrangement: DPST-No (2 form X)

Voltage rating: 12-900 Vdc (main contacts); 30 Vdc (auxiliary)

Mechanical life: 100,000 cycles

### Physical or Other Properties

Weight: 0.79 Kg

Hermetically sealed

Safe for harsh/corrosive environments

No contacts oxidation over periods on non-use

Number of SPDT Auxiliary Contacts per Contactor Type:  
CAP202AS — None  
CAP202MS — Two  
CAP202FS — Four

### Performance Data

#### Physical Data

Contact Arrangement — Power Contacts — DPST-NO (2 Form X)  
Auxiliary Switches — SPDT (form C)

Dimensions — See drawings on next page

Weight — 0.79 Kg (1.74 lb.)

#### Electrical Data

Voltage Rating — Main Contacts — 12-900Vdc  
Auxiliary Contacts — 30Vdc

Current Rating — Main Contacts<sup>1</sup> — 350A/pole  
Auxiliary Contacts — 3A

Contact Resistance — Main Contacts — (2)  
100 mΩ max @ 1 amp  
0.3 mΩ max. @ 200A after 3 mins.

Auxiliary Contacts — 200 mΩ max

#### Hot Switching Performance @ ± 400 Vdc (3) —

100A make/break — 10,000 cycles  
250A make/break — 2,500 cycles  
700A break only — 10 cycles

#### Hot Switching Performance @ ± 270 Vdc (4) —

100A make/break — 40,000 cycles  
250A make/break — 7,500 cycles  
2000A break only @ ±370Vdc (5) — 2 cycles

Maximum Make Current — 700A

Dielectric Withstand Voltage over Life — Terminal to Terminal/Terminals to Coil — 1mA max @ 2,200Vrms

Insulation Resistance over Life — Terminal to Terminal/Terminals to Coil — 50mΩ min @ 500Vdc

Mechanical Life — 100,000 cycles

#### Environmental Data

Shock, 11ms 1/2 sine (operating) — 20G peak

Sine Vibration, 10G peak —

55-2,000 Hz.

Random Vibration, 14 Grms —

15	100	300	900	2000 Hz
.01	.01	.2	.2	.01 G2/Hz

Operating Temperature Range —

-55°C to +85°C

#### Notes:

<sup>1</sup> Using 4/0 conductor. Current rating is affected by attached conductor size and design. Keep terminals below 150°C max. continuous, 175°C for 2 hours max. and 200°C for 1 minute max. For mounting large conductors, request terminal adapter PN 3-1618396-7.

<sup>2</sup> Operational contact resistance is measured by millivolt drop across contacts at a > 100A current. Initial contact resistance may be higher than 0.3mΩ, but will drop below within 30 mins. max.

<sup>3</sup> Voltage applied to each contact set separately.

<sup>4</sup> Voltage applied across both contact sets in series.

<sup>5</sup> May not pass 2,200 Vrms dielectric testing after second interrupt cycle.

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

## KILOVAC CAP200 Series Contactor with 1 Form A (SPST-NO) Contacts Rated up to 500 Amps, 12-900 Vdc

### Product Facts

- Designed to be the smallest, lightest weight, lowest cost sealed contactor in the industry with its current rating
- Built-in coil economizer — only 1.7W hold power @ 12VDC and it limits back EMF to 0V. (models requiring external economizer also available)
- Optional auxiliary contact for easy monitoring of power contact position
- Hermetically sealed — intrinsically safe, operates in explosive/harsh environments with no oxidation or contamination of coil or contacts, including long periods of non-operation
- Versatile coil and power connections
- RoHS versions available

Coil Operating Voltage (Valid Over Temperature Range)			
Voltage (Will Operate)	9-36VDC	32-95VDC	48-95VDC
Voltage (Max.)	36VDC	95VDC	95VDC
Pickup (Close) Voltage Max.	9VDC	32VDC	48VDC
Hold Voltage (Min.)	7.5VDC	22VDC	34VDC
Dropout (Open) Voltage (Min.)	6VDC	18VDC	27VDC
Inrush Current (Max.)	3.8A	1.3A	0.7A
Holding Current (Avg.)	0.13A @ 12V, 0.07A @ 24V	0.03A @ 48V	0.02A @ 72V
Inrush Time (Max.)	130ms	130ms	130ms

## KILOVAC CAP120 Series 900 Vdc Contactor

### Product Facts

- Suitable for application in harsh and explosive environments
- No contact oxidation over periods of non-use
- Size reduced version of MAP/CAP 100 Series contactors
- Bidirectional switching
- Main contacts not polarity sensitive
- Panel mount
- Not position sensitive: mounts in any orientation
- Integrated dual-coil electronic “cut-throat” economizer with suppression

### Applications

- Energy storage systems
- Power distribution
- High-current battery systems
- Lithium ion battery systems
- Solar power

### Schematic

### Description

Designed for harsh environments and loads, the new KILOVAC CAP120 contactor from TE Connectivity (TE) offers exceptional performance for a device this small and light. A reduced-size version of our popular MAP and CAP series contactors, the CAP120 contactor’s small size and light weight opens up new application possibilities for a 150 A/600 Vdc device.

High break levels—1000 A at 400 Vdc and 600 A at 600 Vdc—help increase system flexibility and reliability.

CAP120 contactors provide reliable and long-lasting performance in military ground, military and commercial aerospace, and marine applications.

## KILOVAC KHR500 High-Voltage 600 Amp Contactors

### Product Facts

- 600 A carry
- 3300 A break at 400 Vdc
- 4000 A make current
- Bidirectional load switching
- Safe for application in harsh and explosive environments
- Not position sensitive
- Rugged, robust design
- Smaller and up to 64% lighter than our popular EV500 BUBBA contactors
- Integrated dual-coil electronic “cut throat” economizer
- Switches voltages from 28 to 1000 Vdc

### Applications

- Aerospace
- Ground vehicles
- Marine
- Solar
- Automotive
- Energy storage systems
- UL 508 recognized for US and Canada

### Description

TE Connectivity’s (TE) KILOVAC KHR500 “BUBBA II” feature smaller size and lighter weight than our popular EV500 “BUBBA” high-voltage contactors. Capable of handling inrush currents as high as 4000 A, the contactors are hermetically sealed for use in hazardous or explosive environments.

Configured as a single-pole, single-throw device, the contactors can handle voltages from 28 to 1000 Vdc and continuous 600 A currents.

Because it is not polarity sensitive, the contactor allows bidirectional load switching. An integrated coil economizer reduces the power required to hold the contacts closed to 320 mA at 24 Vdc.

A single-pole, double-throw auxiliary switch supports 3 A @ 125 Vrms or 1 A @ 30 Vdc, and low-level signals down to 5 V/10 mA.

### Electrical Data

**Main Contact Arrangement** — SPST (1 Form X)

**Auxiliary Contact Arrangement** — SPDT (1 For C)

#### Voltage Rating:

**Main Contact** — 28 to 1000 Vdc

**Auxiliary Contacts** — (3 A @ 125 Vrms or 1 A @ 30 Vdc)

#### Current Rating:

**Main Contacts, Continuous** — 600 A

#### Contact Resistance:

Main Contacts — 0.3 mΩ max @ 600 A

Auxiliary Contacts — 150 mΩ @ 1 A

#### Hot Switching Performance @ 400 Vdc:

200 A Make/Break — 4000 cycles

600 A Make/Break — 10 cycles

3000 A Make/Break — 3 cycles

4000 A Make or Pulse through Closed

Contacts (1 ms risetime, 10 ms pulse duration)

## KILOVAC K1K High-Voltage Contactor

### Product Facts

- Handles up to 1000 A/1000 V
- Suitable for application in harsh and explosive environments
- No contact oxidation over periods of non-use
- Bidirectional switching
- Main contacts not polarity sensitive
- Bottom or buss bar mount
- Integrated dual-coil electronic “cut-throat” economizer with internal suppression
- One of the smallest 1000 A/1000 V hermetically-sealed contactors in the industry

### Applications

- Energy Storage/Battery Storage
- Power Distribution
- Alternative Energy
- Electric Vehicles (Military and Commercial)
- Test Equipment

### Description

As one of the smallest, lowest cost, hermetically sealed 1000 A/1000 V switching devices in the Industry, the KILOVAC K1K contactor from TE Connectivity (TE) operates reliably in harsh and explosive environments without oxidation or contamination of contacts, even after long periods of non-operation. The K1K is well suited for power switching at voltages as low as 5 VDC and as high as 1000 VDC. Typical applications include main disconnect contactor for large battery bank applications, for carry and interrupt battery fault currents and other high current applications, power/motor control circuit isolation, and circuit protection and safety.

### Electrical Data

#### Main Contacts

**Contact Arrangement** — SPST-NO (Form X)

**Voltage Rating (Max.)** — 1000 VDC

**Current Rating, Continuous** — 1000 A (At 25°C ambient with four 4/0 conductors or equivalent)

**Current Rating, Short Term** — 1200 A/180 sec

**Contact Resistance** — 0.2 mΩ max. at rated current

#### Hot-Switching Performance, Resistive Load

50 A/1000 VDC — 25,000 cycles  
 130 A/1000 VDC — 10,000 cycles  
 200 A/1000 VDC — 3500 cycles  
 100 A/600 VDC — 10,000 cycles  
 240 A/600 VDC — 2000 cycles  
 1000 VDC/1200 A — 4 cycles (Break Only)

#### Maximum Pulse Through Closed Contacts

6000 A (half cycle, 60 Hz)

#### Dielectric Withstanding Voltage over Life:

Between Open Contacts — 2800 Vrms  
 Contacts to Coil — 2800 Vrms/4000 VDC

End of Life Between Open Contacts — 2200 Vrms

#### Insulation Resistance over Life, Terminal to Terminal; Terminals to Coil

Beginning of Life — 100 MΩ min. @ 500 VDC

End of Life — 50 MΩ min. @ 500 VDC

**Mechanical Life** — 100,000 cycles minimum

### Environmental/Mechanical

**Shock** — 11 ms, 1/2 sine (operating), 20 g peak

**Sine Vibration** — 20 gpeak (operating) 55 to 2000 Hz

**Operating Temperature Range** — -40°C to +105°C

**Weight, Nominal** — 1.02 kg

**Sealing** — Hermetic

### Coil Data

**Coil Data @ 20°C (Internal Two-Coil Economizer)**

**Coil Voltage Range** — 24 VDC nom./32 VDC max.

**Maximum Pickup Current** — 5.5 A

**Nominal Holding Current** — 0.33 A

**Pickup Voltage** — 18 VDC

**Dropout Voltage** — 10 VDC

**Pickup Pulse (Max)** — 75 ms

**Coil Resistance ±5%** — 4.7 Ω

Pickup/72 Ω Hold

**Coil Holding Power** — 8 W

#### Main Contacts

Operate Time (Max) — 50 ms

Operate Bounce (Typ.) — 5 ms

Release (Typ.) — 8 ms

## KILOVAC K1K High-Voltage Contactor (Continued)

\*User furnished bus bar must be equivalent to four 4/0 conductors. Torque to 45-55 in.-lbs. per connection (5.1 – 6.2 Nm)

## KILOVAC KCS01 Current-Sensing High-Voltage Contactor

### Product Facts

- Saves space by eliminating the need for external sensor
- Simplifies design
- Flexible configuration for application needs
- Suitable for many applications in harsh, explosive, and corrosive environments
- No oxidation or contamination of contacts, including long periods of non-operation
- Extremely small size
- Lightweight contactor: 145 grams
- Bidirectional switching
- Main contacts not polarity sensitive
- Not position sensitive: mounts in any orientation
- Integrated dual-coil electronic economizer with coil suppression
- EMC compliant: no radiated coil emissions

### Applications

- Energy Storage/Battery Storage
- Power Distribution
- Power Motion Control
- High-Voltage DC Converter Systems
- Alternative Energy
- Military and Commercial Electric Vehicles
- Test Equipment

### Description

The new KILOVAC Current Sensing contactors from TE Connectivity (TE) eliminate the need for a discrete current sensor, saving the customer money, weight and space. The sensor function also has a programmable trip feature, allowing for immediate, delayed or disabled trip.

In addition to the integrated current sensing feature, KCS01 contactors are rugged and hermetically sealed, making them suitable for a variety of applications in harsh, corrosive and explosive environments. Even after long periods of non-operation, the contacts are impervious to oxidation and contamination.

The KCS01 contactor is extremely small and lightweight. It features bidirectional switching and an integrated dual-coil electronic economizer with internal coil suppression, and can be mounted in any orientation. Main contacts are not polarity sensitive, and the KCS01 is EMC compliant with no radiated coil emissions.

### Performance Data

#### Main Contacts

- Test Equipment

### Description

Hermetically sealed and designed for harsh environments and loads, KILOVAC EV202 high-voltage contactors from TE Connectivity (TE) offers exceptional performance in an extremely small and lightweight device.

Available with 12 or 24-V coils, the contactors are suited to 270 and 400-VDC power systems. They are available with two optional auxiliary contacts.

High break levels—2000 A at 270 VDC and 700 A at 400 VDC—help increase system flexibility and reliability.

EV202 contactors provide reliable and long-lasting performance in military and commercial electric ground vehicles, energy storage systems, and power distribution and motion control applications.

### Electrical Data

**Configuration:** Double pole, single throw, normally open

**Voltage Rating, Main Contacts:** 600 VDC, max.

**Make Current:** 700 A, max.

**DWV and Insulation Resistance over Life, Terminal to Terminal/ Terminals to Coil**

**Dielectric Withstand Voltage:** 1 mA max @ 2200 Vrms

**Insulation Resistance:** 50 mΩ min. @ 500 VDC

**Hot Switch Life:**

Make/Break Current	@ Voltage	Hot Switch Life
100 A	270 VDC	40,000
	400 VDC	10,000
250 A	270 VDC	7500
	400 VDC	2500
700 A Break Only	400 VDC	10
2000 A Break Only	270 VDC	2

### Coil Data (over -40°C to +85°C unless noted)

Coil Voltage, nom./max.	12/16 VDC	24/32 VDC
<b>Pick up voltage, max.</b> (applied as step voltage only)	8 VDC	16 VDC
<b>Dropout Voltage</b>	2.5–4 VDC	3–8 VDC
<b>Coil Inrush Current @ V-nom., max.</b>	5 A	4.5 A
<b>Coil Inrush Time, nom./max.</b>	75/150 ms	75/150 ms
<b>Hold Current @ V-nom., max.</b>	0.6 A	0.2 A
<b>Coil Suppression, max.</b>	40 VDC	60 VDC
<b>Operate Times</b>		
<b>Operate Time, nom./max.</b>	13/20 ms	13/20 ms
<b>Operate Bounce, nom./max.</b>	3/10 ms	3/10 ms
<b>Release Time, nom./max.</b>	5 ms	5 ms
<b>Release Time, max.</b> (including max. arc time)	25 ms	25 ms

## KILOVAC EV202 High-Voltage Contactors (Continued)

### Optional Auxiliary Contacts

**Configuration** — Two SPDT switch outputs

**Ratings** — 30 VDC/2A switching or 5 V/5 mA signal

### Environmental

**Operating Temperature Range** — -55°C to +85°C

**Hermetically Sealed** — Safe for harsh/corrosive environments

**Nonoxidizing** — No contact oxidation over periods of nonuse

### RoHS Compliant

**Economizer** — Integrated electronically switched coil economizer with coil suppression

**EMC Compliant** — No radiated coil emissions

### Mechanical

**Shock** — 11 ms 1/2 sine (operating): 20 g peak

**Sine Vibration** — 10 g peak: 10 to 2000 Hz

**Random Vibration** — 14 grms:

Hz	15	100	300	900	2000
g <sup>2</sup> /Hz	0.01	0.01	0.2	0.2	0.01

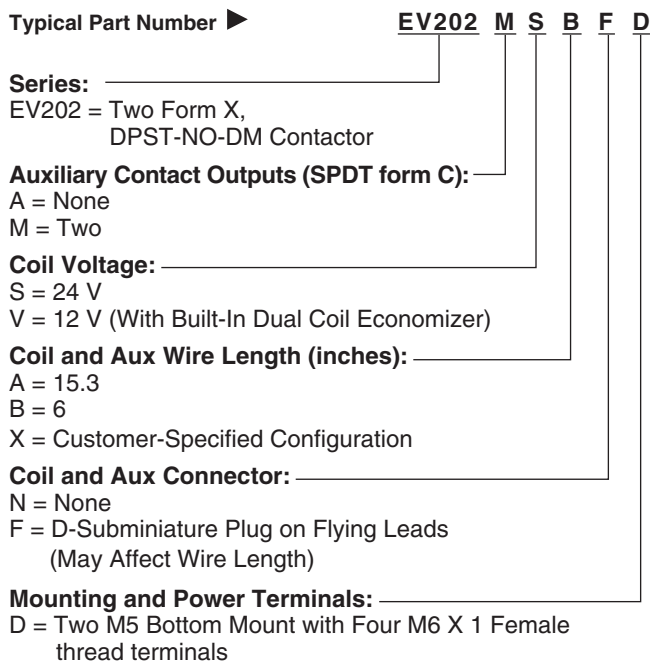

**Bidirectional Switching** — Main contacts not polarity sensitive

**Mounting** — Mounts in any orientation; not position sensitive

**Mechanical Life** — 100,000 cycles

**Weight** — 0.77 kg

## KILOVAC EV200 Series Contactor With 1 Form X (SPST-NO) Contacts Rated 500+ Amps, 12-900 Vdc

### Product Facts

- Designed to be the smallest, lightest weight, lowest cost sealed contactor in the industry with its current rating (500+A carry, 2000A interrupt at 320VDC)
- Built-in coil economizer — only 1.7W hold power @ 12VDC and it limits back EMF to 0V. Models requiring external economizer also available
- Optional auxiliary contact for easy monitoring of power contact position
- Hermetically sealed — intrinsically safe, operates in explosive/harsh environments with no oxidation or contamination of coil or contacts, during long periods of non-operation
- Versatile coil/power connections
- UL Recognized for the U.S. and Canada (File E208033) All contact ratings & coil versions may not be UL Recognized
- CE marked for EC applications
- AIAG QS9000 designed, built and approved
- RoHS versions available

EV200 Series Contactor (CZONKA Relay, Type)

Coil Operating Voltage (Valid Over Temperature Range)			
Voltage (Will Operate)	9-36VDC	32-95VDC	48-95VDC
Voltage (Max.)	36VDC	95VDC	95VDC
Pickup (Close) Voltage Max.	9VDC	32VDC	48VDC
Hold Voltage (Min.)	7.5VDC	22VDC	34VDC
Dropout (Open) Voltage (Min.)	6VDC	18VDC	27VDC
Inrush Current (Max.)	3.8A	1.3A	0.7A
Holding Current (Avg.)	0.13A @ 12V, 0.07A @ 24V	0.03A @ 48V	0.02A @ 72V
Inrush Time (Max.)	130ms	130ms	130ms

### Ordering Information

Typical Part Number ► **EV200 A A A N A**

**Series:** EV200 = 500+ Amp, 12-900VDC Contactor

**Contact Form:**  
 A = Normally Open  
 H = Normally Open with NO Aux. Contacts  
 G = Normally Open with NC Aux. Contacts

**Coil Voltage:**  
 A = 9-36VDC (1 = requires external coil economizer)  
 D = 32-95VDC (2 = requires external coil economizer)  
 J = 48-95VDC (3 = requires external coil economizer)  
 R = 28VDC with Mechanical Economizer

**Coil Wire Length:**  
 A = 15.3 in (390 mm)

**Coil Terminal Connector:**  
 N = None  
 C = Molex Mini-fit Jr, 2 Skt, Female 18-24, P/N 39-01-2020 & 39-00-0060 +red is pin 1 (A length only)

**Mounting & Power Terminals:**  
 A = Bottom Mount & Male 10mm x M8 Terminals

### Performance Data

**Contact Arrangement, Power Contacts** — 1 Form A (SPST-NO)

**Rated Operating Voltage** — 12 - 900 VDC

**Continuous (Carry) Current, Typical** — 500 A @ 85°C, 400 mcm conductors  
 Consult Factory for required conductors for higher (500+ A) currents

**Make/Break Current at Various Voltages 1** — See graph next page

**Break Current at 320VDC 1** — 2,000 A, 1 cycle<sup>3</sup>

**Contact Resistance, Typ. (@200A)** — 0.2 mohms

**Load Life** — See graph next page

**Mechanical Life** — 1 million cycles

**Contact Arrangement, Auxiliary Contacts** — 1 Form A (SPST-NO)

**Aux. Contact Current, Max.** — 2A @ 30VDC / 3A @ 125VAC

**Aux. Contact Current, Min.** — 100mA @ 8V

**Aux. Contact Resistance, Max.** — 0.417 ohms @ 30VDC / .150 ohms @ 125VAC

**Operate Time @ 25°C** — Close (includes bounce), Typ. — 15 ms  
 Bounce (after close only), Max. — 7 ms  
 Release (includes arcing), Max @ 2000A — 12 ms

**Dielectric Withstanding Voltage** — 2,200 Vrms @ sea level (leakage <1mA)

**Insulation Resistance @ 500VDC** — 100 megohms<sup>2</sup>

**Shock, 11ms 1/2 Sine, Peak, Operating** — 20 G

**Vibration, Sine, 80-2000Hz., Peak** — 20 G

**Operating Ambient Temperature** — -40°C to +85°C

**Weight, Nominal** — .95 lb. (.43 kg)

**Notes:**  
<sup>1</sup> Main power contacts  
<sup>2</sup> 50 at end of life  
<sup>3</sup> Does not meet dielectric & IR after test, 1700 amp for unit with Aux. Contacts

KILOVAC High Voltage DC Contactors

## KILOVAC EV200 Series (CZONKA Relay, Type III) (Continued)

### Outline Dimensions

### Estimated Make & Break Power Switching Ratings

- NOTES:**
- 1) For resistive loads with 300µH maximum inductance. Consult factory for inductive loads.
  - 2) Estimates based on extrapolated data. User is encouraged to confirm performance in application.
  - 3) End of life when dielectric strength between terminals falls below 50 megohms @ 500VDC.
  - 4) The maximum make current is 650A to avoid contact welding.

For factory-direct application assistance,  
 dial 800-253-4560, ext. 2055, or  
 805-220-2055.

EV200 Capacitive Make Test Curves for Pre-Charged Motor Controller

## KILOVAC EV200B Series Contactor With 1 Form Y (SPST-NC) Contacts Rated 500+ Amps, 12-900 Vdc

### Product Facts

- Normally closed version of popular EV200 series contactors
- Designed to be the smallest, lowest cost, lightest weight sealed contactor in the industry at its current rating
- Optional auxiliary contacts for monitoring position of power contacts
- Hermetically sealed — operates in explosive/harsh environments with no oxidation or contamination of coil or contacts during long periods of non-operation
- Not position sensitive, can be mounted in any orientation
- RoHS versions available

### Physical Data

**Contact Arrangements** — Main Contacts — SPST, Normally Closed  
**Dimensions** — See drawing  
**Weight, Nominal** — .95 lb. (.43 kg)

### Environmental Data

**Shock, 11ms 1/2 Sine (Operating)** — 30  $G_{peak}$  (Closed)  
 10  $G_{peak}$  (Open)  
**Sine Vibration, 10  $G_{peak}$**  — 55-2000 Hz  
**Random Vibration, 7.1 Grms** — 15 Hz (.001  $G^2/Hz$ ), 100 Hz (.04  $G^2/Hz$ ), 1000 Hz (.04  $G^2/Hz$ ), 1500 Hz (.02  $G^2/Hz$ )  
**Operating Temperature Range** — -40°C to +85°C

### Electrical Data

**Voltage Rating** — Main Contacts (Max) — 750 Vdc  
**Current Rating, Continuous** — Main Contacts 1 — 500A  
**Contact Resistance** — Main Contacts 2 — 0.2 m $\Omega$  max above 300A  
 0.3 m $\Omega$  max between 50 and 300A  
**Hot Switching Performance (Positive Polarity)** <sup>3</sup> — 200A make/ break @ 270Vdc — 10,000 cycles  
 600A make/ break @ 360Vdc — 100 cycles  
 800A break only @ 360Vdc — 15 cycles  
 1500A break only @ 360Vdc — 1 cycle  
**Mechanical Life (Min)** — 1 million cycles  
**Dielectric Withstand Voltage** — Terminal to Terminal/ Terminals to Coil — 1mA max @ 2,200 Vrms

**Insulation Resistance** — Terminal to Terminal/ Terminals to Coil — 100M $\Omega$  min @ 500Vdc new  
 50M $\Omega$  min @ 500Vdc end of life

### Coil Data 4

**Nominal Coil Voltage** <sup>5</sup> — Low range — 9.6-14 Vdc  
 High range — 19-28 Vdc  
**Pick Up (Max) @ 25°C** — 9.6/18.5 Vdc  
**Pick Up @ Max Coil Temperature** — 10.5/22 Vdc

**Hold (Min)** — 6/12 Vdc  
**Dropout (Min)** — 4/9 Vdc  
**Pickup Current, Peak** <sup>6</sup> @ 25°C — 6 A  
**Operate Specs @ 25°C** — Operate Time (Typ) — 15 ms  
 Operate Bounce (Max) — 5 ms  
 Release Time (Typ) — 15 ms  
**Economizer Operating Frequency** — 18 kHz  
**Hold Current** — 0.9A/12 Vdc  
 0.3A/24 Vdc

### Notes:

- 1 Ambient conditions and conductor design affect rating. Terminal temperature rise should be 75°C max above ambient. Keep relay terminals below 150°C max continuous, 175°C max for two hours, and 200°C for 1 minute.
- 2 Stabilized reading. Contact resistance may exceed spec in the first 10 minutes of current carry.
- 3 Units are polarity sensitive. Approximately 50% de-rating for reverse polarity switching. Consult factory for review of specific requirements.
- 4 Over temperature range unless noted.
- 5 Voltage ranged sensed by contactor 10 ms after application of source voltage.
- 6 Pickup duration 100 ms.

## KILOVAC EV200P Series Latching Contactor With 1 Form X (SPST Latch) Contacts Rated 500+ Amps, 12-900 Vdc

### Product Facts

- Latching version of popular EV200 Series
- Designed to be the smallest, lowest cost, lightest weight sealed contactor in the industry at its current rating
- Optional auxiliary contacts for monitoring position of power contacts
- Hermetically sealed — operates in explosive/harsh environments with no oxidation or contamination of coil or contacts during long periods of non-operation
- Not position sensitive, can be mounted in any orientation
- RoHS versions available

### Physical Data

**Contact Arrangements** — Main Contacts — SPST, Latching  
 Auxiliary Contacts 1 — Up to 2 Form A  
**Dimensions** — See drawing  
**Weight, Nominal** — .95 lb. (.43 kg)

### Environmental Data

**Shock, 11ms 1/2 Sine (Operating)** — 30 G<sub>peak</sub>  
**Sine Vibration, 20 G<sub>peak</sub>** — 55-2000 Hz  
**Random Vibration, 14.06 Grms** — 15 Hz (.002 G<sup>2</sup>/Hz), 100 Hz (.002 G<sup>2</sup>/Hz), 450 Hz (.12 G<sup>2</sup>/Hz), 900 Hz (.12 G<sup>2</sup>/Hz), 2000 Hz (.083 G<sup>2</sup>/Hz)  
**Operating Temperature Range** — -40°C to +85°C

### Electrical Data

**Voltage Rating** — Main Contacts (Max) — 750 Vdc  
**Current Rating, Continuous** — Main Contacts 2 — 500A  
**Contact Resistance** — Main Contacts 3 — 0.2 mΩ max above 300A  
 0.3 mΩ max between 50 and 300A  
**Hot Switching Performance (Positive Polarity) 4** — 200A make/ break @ 270Vdc — 10,000 cycles  
 600A make/ break @ 360Vdc — 100 cycles  
 800A break only @ 360Vdc — 15 cycles  
 2000A break only @ 360Vdc — 1 cycle  
**Mechanical Life (Min)** — 1 million cycles

**Pick Up/Latch (Max) @ 25°C** — 9 Vdc  
**Hold (Min)** — N/A  
**Reset (Max)/Dropout (Min)** — 9 Vdc  
**Duty Cycle, Max 7** — 20%  
**Coil Resistance @ 25°C** — 2.5 Ω  
**Operate Specs @ 25°C** — Operate Time (Typ) — 15 ms  
 Operate Bounce (Max) — 7 ms  
 Release Time (Max) — 15 ms

### Notes:

- 1 Product can be configured alternately with form B or C auxiliary switches if required. This changes the product part number, depending on specific auxiliary configuration. Consult TE for availability and part number
- 2 Ambient conditions and conductor design affect rating. Terminal temperature rise should be 75°C max above ambient. Keep relay terminals below 150°C max continuous, 175°C max for two hours, and 200°C for 1 minute.
- 3 Stabilized reading. Contact resistance may exceed spec in the first 10 minutes of current carry.
- 4 Units are polarity sensitive. Approximately 50% de-rating for reverse polarity switching. Consult factory for review of specific requirements.
- 5 Over temperature range unless noted. Suggested coil pulse = 50-100 ms.
- 6 24V and 48V coils available on request — consult factory.
- 7 Intermittent Duty Coil. Coil overheating can occur if duty cycle

### Dielectric Withstand Voltage

Terminal to Terminal/ Terminals to Coil — 1mA max @ 2,200 Vrms

### Insulation Resistance

Terminal to Terminal/ Terminals to Coil — 100MΩ min @ 500Vdc new  
 50MΩ min @ 500Vdc end of life

## KILOVAC EV100 Series Contactor With 1 Form X Contacts Rated 100 Amps Continuous, 600 Vdc

### Product Facts

- Hermetically sealed
- Operates in explosive/harsh environments without oxidation or contamination of contacts, during long periods of non-operation
- 8kV isolation between open contacts permits use for high voltage isolation and carry
- Coil economizer allows for operation between 9-36 VDC
- Designed and built in accordance with AS 9100

### Description

Low cost, 600 Vdc, 100 amp, hermetically sealed DC contactor

Economized coil for low power consumption between 9-36 VDC

Bottom mount, not position sensitive

One million cycle mechanical life

### Applications

Power/motor control circuit isolation, circuit protection and safety in industrial machinery

Automotive battery switching and backup

Solar inverter switching

Automotive pre-charge

Test Equipment

Power distribution

### Electrical

Contact arrangement: SPST-NO (Form X., Double Make)

Voltage rating: 5-600 Vdc at 100 Amps

50K cycles Make/Break: 50 Amps at 400 Vdc

25K cycles Make/Break: 50 Amps at 600 Vdc

Holding current: 0.15 Amps at 24 Vdc

Operate time: 30 ms max.

### Physical or Other Properties

Hermetically sealed

Safe for harsh/corrosive environments

No contact oxidation over periods of non-use

### Mechanical

Small size: 1.5" x 1.5" approximately

Weight: 130 grams

### Performance Data

#### Physical Data

Contact Arrangement, Main Contacts — SPST-NO (Form X)

Dimensions — See drawings on next page

Weight — 4.58 oz (130g)

#### Electrical Data

Voltage Rating, Main Contacts Switching (Max) — 750VDC

Current Rating, Main Contacts Switching —

Continuous <sup>1</sup> — 100A  
Short Term, 3 Minutes <sup>2</sup> — 200A

Contact Voltage Drop, Main Contacts — 0.05 max @ rated current

### Resistive Load Performance (polarity sensitive) —

50A make/break @ +400Vdc — 50,000 cycles

50A make/break @ +600Vdc — 25,000 cycles

100A make/break @ +400Vdc — 6,000 cycles

100A make/break @ +600Vdc — 5,000 cycles

100A make/break @ -400Vdc — 1,000 cycles

100A make/break @ -600Vdc — 25 cycles

200A make/break @ +400Vdc — 500 cycles

200A make/break @ +600Vdc — 200 cycles

1,000A break only @ +400Vdc — 5 cycles

600A break only @ +600Vdc — 5 cycles

600A make only — 10 cycles

**Maximum Short Circuit Current (1/2 cycle, 60 Hz) — 1,250A**  
(through closed contacts)

**Dielectric Withstand Voltage —**  
Between Open Contacts — 2,200Vrms  
Contacts to Coil — 1,500Vrms/4,000Vdc

**Insulation Resistance, Terminal to Terminal / Terminals to Coil —**  
When New — 100 megohms, min.  
@ 500Vdc  
At End of Life — 50 megohms, min.  
@ 500Vdc

**Mechanical Life — 106**

### Operate & Release Time

**Operate Time Max. — 30ms**

**Operate Bounce Max. — 5ms**

**Release Time — 10ms**

### Environmental Data

**Shock, 11ms 1/2 sine (operating) — 20G peak**

**Sine Vibration, 20G peak — 55-2,000 Hz.**

**Operating Temperature Range — -40°C to +85°C**

**Noise Emission (at 100 mm distance) — 70dB(a)**

### Notes

<sup>1</sup> 8.4mm<sup>2</sup> conductor. Current rating is affected by conductor size. Keep terminals below 150°C max. continuous.

<sup>2</sup> 3 minutes at +40°C ambient, 1 minute at -80°C ambient with 8.4mm<sup>2</sup> (#8 AWG) conductor.

## KILOVAC LEV100 Series 900 Vdc Contactor With 1 Form X Contacts Rated 100A Continuous

### Product Facts

- Hermetically sealed — Operates in explosive/harsh environments without oxidation or contamination of contacts, including long periods of non-operation
- 8kV isolation between open contacts permits use for high voltage isolation and carry
- 12, 24 and 48 Vdc coils
- Designed and built in accordance to AIAG QS9000
- Not position sensitive, can be mounted in any orientation
- Solid copper contacts
- UL Recognized for the U.S. and Canada (File E208033)  All contact ratings & coil versions may not be UL Recognized
- RoHS versions available

### Description

Lowest cost, 900 Vdc 100 amp, hermetically sealed DC contactor in the industry

Compact package available in side- or bottom-mount configurations, not position sensitive

### Applications

Power/motor control circuit isolation, circuit protection and safety in industrial machinery

Automotive battery switching and backup

### Mechanical

Compact epoxy-sealed resin enclosure occupies only about 4 in<sup>3</sup> (65.5 cm<sup>3</sup>)

Robust integral mounting plate on either bottom or side of enclosure accepts two M4 screws

Inert gas filled contact chamber

Flying leads for coil connections

Load terminals threaded for M5 bolts (not included)

### Performance Data

#### Physical Data

**Contact Arrangement, Main Contacts** — SPST-NO-DM (1 Form X)

**Dimensions** — See drawings on next page

**Weight** — 6.7 oz (190g)

#### Contact Data

**Contact Arrangement, Main Contacts** — SPST-NO-DM (1 Form X)

**Voltage Rating, Main Contacts Switching (Max)** — 900VDC

**Current Rating, Main Contacts Switching** —

Continuous 1 — 100A  
Short Term, 3 Minutes 2 — 200A

**Hot Switching Performance (Polarity Sensitive)** —

50A make/break @ +400Vdc — 50,000 cycles

100A make/break @ +400Vdc — 6,000 cycles

100A make/break @ -400Vdc — 1,000 cycles

200A make/break @ +400Vdc — 500 cycles

1,000A break only @ +400Vdc — 250 cycles

600A make only — 25 cycles

**Maximum Short Circuit Current (1/2 cycle, 60 Hz)** — 1,250A (through closed contacts)

**Dielectric Withstand Voltage 3** —

Between Open Contacts —

5,600Vrms/8,000Vdc

Contacts to Coil —

2,000Vrms/4,000Vdc

### Insulation Resistance, Terminal to Terminal / Terminals to Coil —

When New — 100 megohms, min. @ 500Vdc

At End of Life — 50 megohms, min. @ 500Vdc

**Mechanical Life** — 1 million cycles

### Operate & Release Time

**Operate Time Max.** — 25ms

**Operate Bounce Max.** — 5ms

**Release Time** — 10ms

### Environmental Data

**Shock, 11ms 1/2 sine (operating)** — 20G peak

**Sine Vibration, 20G peak** — 55-2,000 Hz.

**Operating Temperature Range** — -40°C to +85°C

**Noise Emission (at 100 mm distance)** — 70dB(a)

### Notes

1 8.4 mm<sup>2</sup> conductor. Current rating depends upon conductor size. Keep terminals below 175°C max continuous.

2 3 minutes at +40°C ambient with 8.4 mm<sup>2</sup> (#8 AWG) conductor.

3 2,000Vrms minimum under all conditions, until end of life.

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

## KILOVAC LEV100 Series 900 Vdc Contactor (Continued)

Coil Operating Voltage (Valid Over Temperature Range)			
Nominal Voltage	12Vdc	24Vdc	48Vdc
Maximum Voltage	16Vdc	28Vdc	52Vdc
Pick Up Voltage (20°C)	8Vdc	16Vdc	33Vdc
Drop Out Voltage (20°C)	≤1.2Vdc	≤2.4Vdc	≤4.8Vdc
Coil Current (Nominal at 20°C, 12vdc)	461mA	250mA	122mA
Coil Power Nominal @ Vnom, +20°C	5.5W	6.0W	6.0W
Pickup (Close) Voltage Max. @85°C	9.6Vdc	19.2Vdc	38.4Vdc
Coil Resistance Nominal @ +20°C ± 5% (ohms)	26	96	392

 KILOVAC High Voltage  
 DC Contactors

## KILOVAC LEV100H High-Voltage Contactor

### Product Facts

- Safe for application in harsh, explosive, and corrosive environments
- No contact oxidation over periods of non-use
- Not position sensitive; available in side and bottom mount configurations
- 8 kV isolation between open contacts permits use for high voltage isolation and carry
- 12, 24, and 48 VDC coils available
- Small 1000 VDC, 150 A contactor

### Applications

- Energy Storage/Battery Storage
- Power Distribution
- Alternative Energy
- Hybrid Electric Vehicles (Military and Commercial)
- Test Equipment

### Description

The new KILOVAC LEV100H extended performance contactors with auxiliary contacts from TE Connectivity (TE) are designed for harsh environment and load applications. This version of our popular EV and LEV series contactors offers extremely high performance for its small size and low weight. Hermetically sealed, KILOVAC LEV100H contactors are capable of operating in harsh, explosive environments without oxidation or contamination of contacts, even after long periods of non-operation.

### Mechanical/Environmental

#### Contact Arrangement —

Main Contacts — SPST-NO (Form X)  
 Auxiliary Contact — SPST-NO (Form A) (Note 1)

**Dimensions** — See drawings

**Weight** — 6.70 oz. (190 g)

#### Hermetically Sealed

#### Safe for Harsh/Corrosive Environments

**Contact Oxidation** — None over periods of non-use

**Shock** — 11 ms 1/2 sine (operating, 20 g Peak)

**Sine Vibration** — 20 g peak— 55-2000 Hz

**Operating Temperature Range**— 40°C to +80°C

**Noise Emission** (at 100 mm distance) — 70 dBA

### Electrical Data

**Mechanical Life** — 1,000,000 cycles

#### Voltage Rating —

Main Contacts Switching (max.) — 1000 VDC

Continuous (Note 2) 100 A

Short Term (3 minutes) (Note 3)— 200 A

**Contact Voltage Drop** — Main Contacts: 0.05 max. @ rated current

#### Resistive Load Performance (polarity sensitive) —

50 A make/break @ +1000 VDC— 50 cycles

100 A make/break @ +400 VDC— 1000 cycles

200 A make/break @ +400 VDC— 500 cycles

1000 A break only @ +400 VDC— 2 cycles

600 A make only: 10 cycles

50 A @ 400 VDC make only— 25,000 cycles

**Maximum Short Circuit Current (1/2 cycle, 60 Hz) (through closed contacts)** — 1250 A

#### Dielectric Withstanding Voltage —

Between Open Contacts (Note 4) — 5600 Vrms

Contacts to Coil — 2200 Vrms

**Insulation Resistance @ 500 VDC, Terminal to Terminal/ Terminals to Coil** —

New — 100 MΩ min.

End of Life — 50 MΩ min.

## KILOVAC LEV100H High-Voltage Contactor (Continued)

### Operate and Release Time

Coil Voltage, Nominal/Max.	12/16 VDC	24/28 VDC	48/52 VDC
Coil Resistance (20°C)	26 Ω	96 Ω	392 Ω
Pick Up Voltage (20°C)	8 VDC	16 VDC	33 VDC
Dropout Voltage (20°C)	≤1.2 VDC	≤2.4 VDC	≤4.8 VDC
Coil Current (Nom. at 20°C, 12 VDC)	0.46 A	0.25 A	0.12 A
Coil Power (Nom. at Vnom, 20°C)	5.5	6.0	6.0
Main Contacts:	Operate Time (Max.)	25 ms	
	Operate Bounce (Max.)	6 ms	
	Release Time	10 ms

## KILOVAC LEV200 Series Contactor With 1 Form X Contacts Rated 500+ Amps, 12-900Vdc

### Product Facts

- Designed to be the lowest cost sealed contactor in the industry with its current rating (500+A carry, 2000A interrupt at 320Vdc)
- Available with bottom or side mounting — not position sensitive
- Optional auxiliary contact for easy monitoring of power contact position
- Hermetically sealed — operates in explosive/harsh environments with no oxidation or contamination of coils or contacts, including long periods of non-operation
- Typical applications include battery switching and backup, DC voltage power control, circuit protection and safety
- Versatile coil/power connections
- Designed and built in accordance to AIAG QS9000
- RoHS compliant

### Coil Data (Valid Over Temperature Range) <sup>4</sup>

	12Vdc	24Vdc	48Vdc
Nominal Voltage	12Vdc	24Vdc	48Vdc
Pickup Voltage (Will Operate)	9.0Vdc	19.0Vdc	38.0Vdc
Voltage (Max.)	15Vdc	30Vdc	60Vdc
Dropout Voltage	0.75 - 2.0Vdc	1.0 - 5.0Vdc	2.0 - 7.0Vdc
Coil Resistance @ 25° (Typ.)	11 ohms	40 ohms	145 ohms

### Ordering Information

Typical Part Number ►

**LEV200 A 4 N A A**

#### Series:

LEV200 = 500+ Amp, 12-900Vdc Contactor

#### Contact Form:

A = Normally Open

H = Normally Open with Aux. Contacts. (Option "H" requires option "A" in Coil Wire Length and option "N" in Coil Terminal Connector.)

Note: Other auxiliary contact forms available. Consult factory.

#### Coil Voltage:

4 = 12Vdc 5 = 24Vdc B = 28Vdc

6 = 48Vdc K = 72Vdc

8 = 96Vdc L = 110Vdc O = 115Vac 9 = 240Vac

Notes: Consult factory for detailed specifications and availability of coils not listed in "Coil Data" table above. In coil voltage codes, 115Vac is designated by the letter "O" rather than the numeral "0."

#### Coil Wire Length:

A = 15.3 in (390 mm) N = None (Requires option "A" in next step.)

#### Coil Terminal Connector:

N = None, stripped wires

(Requires option "A" in previous step.)

A = Studs, #10-32 Threaded (Electrical connection is made to the tab at the base of the stud.)

Note: Specify option A, stripped wires, for coil voltages > 96Vdc

#### Mounting & Power Terminals:

A = Bottom Mount & Male 10mm x M8 Threaded Terminals

F = Side Mount & Male 10mm x M8 Threaded Terminals

Consult factory regarding other available mountings and power terminals.

### Performance Data

#### Contact Arrangement, Power

Contacts — 1 Form X (SPST-NO-DM)

#### Rated Operating Voltage —

12 - 900 VDC

#### Continuous (Carry) Current,

Typical — 500 A @ 65°C, 400 mcm conductors

Consult TE for required conductors for higher (500+ A) currents

#### Make/Break Current at Various Voltages <sup>1</sup> — See graph next page

#### Break Current at 320VDC <sup>1</sup> —

2,000 A, 1 cycle <sup>3</sup>

#### Contact Resistance, Typ.

(@200A) — 0.2 mohms

#### Load Life — See graph next page

#### Mechanical Life — 1 million cycles

#### Contact Arrangement, Auxiliary

Contacts — 1 Form A (SPST-NO)

#### Aux. Contact Current, Max. —

2A @ 30VDC / 3A @ 125VAC

#### Aux. Contact Current, Min. —

100mA @ 8V

#### Aux. Contact Resistance, Max. —

0.417 ohms @ 30VDC /

.150 ohms @ 125VAC

#### Operate Time @ 25°C —

Close (includes bounce), Typ. — 25 ms

Bounce (after close only), Max. — 7 ms

Release (includes arcing), Max @

2000A — 12 ms

#### Dielectric Withstanding Voltage —

2,200 Vrms @ sea level (leakage <1mA)

#### Insulation Resistance @ 500VDC —

100 megohms <sup>2</sup>

#### Shock, 11ms 1/2 Sine, Peak,

Operating — 20 G

#### Vibration, Sine, 80-2000Hz.,

Peak — 20 G

#### Operating Ambient Temperature

—40°C to +85°C

#### Weight, Typical — 1.3 lb. (.60 kg)

#### Notes:

<sup>1</sup> Main power contacts

<sup>2</sup> 50 at end of life

<sup>3</sup> Does not meet dielectric & IR after test, 1700 amp for unit with Aux. Contacts

<sup>4</sup> Contacts will operate with  $0.8V_{nom} < V_{coil} < 1.1V_{nom}$  over temperature

#### Invalid

#### Combinations/Reason

## KILOVAC LEV200 Series (Continued)

### Outline Dimensions

**Note:** When stud terminals are specified for coil connections, the electrical connection is made at the tab located at the base of the stud.

### Side Mount Enclosure

### Bottom Mount Enclosure

### Estimated Make & Break Power Switching Ratings

#### NOTES:

- 1) For resistive loads with 300µH maximum inductance. Consult factory for inductive loads.
- 2) Estimates based on extrapolated data. User is encouraged to confirm performance in application.
- 3) End of life when dielectric strength between terminals falls below 50 megohms @ 500VDC.
- 4) The maximum make current is 650A to avoid contact welding.

### LEV200 Capacitive Make Test Curves for Pre-Charged Motor Controller

For factory-direct application assistance,  
dial 800-253-4560, ext. 2055, or  
805-220-2055.

## FM200 (“Flatman III”) Series Contactor 200 Amps, 480 VAC (50/60 Hz), or 48 Vdc, 1-, 2-, or 3-poles

### Product Facts

- Multi-pole configurations
- Normally open, normally closed and mixed contact arrangements
- Optional quick connect tabs for sensing
- Small, lightweight & cost-effective – designed to be the smallest, lowest cost contactor in the industry with its current rating
- Standard models available with 12VDC, 24VDC and 115 VAC coils. Consult factory for 240VAC coil models.
- 1 Form A auxiliary contacts

File E208033

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

### Product Specifications

Parameter	Units	Value for FM200 Series
Contact Arrangement		1, 2 or 3 poles
Contact Form (per pole)		Form X or Y (NO-DM or NC-DB)
Rated Operating Voltage	V	480Vrms (L-L) or 48VDC
Max. Contact Voltage (transient)	V	750Vrms or 60VDC
Continuous (Carry) Current	Arms or ADC	200/pole (Form X) 150/pole (Form Y)
Power Switching Form X (0.7-1.0 PF)	Cycles	2,000 @ 300Arms 10,000 @ 200Arms 20,000 @ 100Arms 5,000 @ 200A/48VDC 2 million @ 50A/28VDC
Power Switching Form Y (0.7-1.0 PF)	Cycles	2,000 @ 225Arms 10,000 @ 150Arms 20,000 @ 75Arms 5,000 @ 150A/48VDC 2 million @ 35A/28VDC
Mechanical Life	Cycles	>2 million
Contact Voltage Drop	mV	75 for Form X or Form Y
Auxiliary Contact Arrangement		1 Form A (SPST-NO)
Auxiliary Contact Rating	Arms or ADC	1 @ 30VDC, 3 @ 125VAC
Dielectric Withstanding Voltage	Vrms	2,200 @ sea level
Insulation Resistance @ 500VDC	Megohms	100
Shock, 11ms 1/2 sine, peak	G	10
Vibration, sine, 10-2000Hz.	G	5
Operating Temperature	°C	-20 to +60
Storage Temperature	°C	-40 to +85
Ambient Humidity	%RH	0 to 95
Weight	oz. / kg	17.6 - 49.4 / 0.5 - 1.4

See Outline Dimensions for model-specific weight information.

### Available Pole Configurations and Applicable Coil Codes

No. of NC Poles (across)	0	1	2	3
No. of NO Poles (down)

## AP90X-05 - 90 Amps SPUD Contactor

### Product Facts

- 90 A carry, 350 A overload @ 270 Vdc
- Same size and weight as AP50X
- Versatile power, voltage, and current operating range
- Ideal for circuit protection and control
- Bi-directional switching
- Fast operate and release time
- Low power consumption
- Vacuum-sealed contacts; can operate in harsh environments
- Space-rated version built in accordance with customers SCD
- Meets many requirements of MIL-PRF-32085

### Contact Ratings\*

\*Based on data extrapolated from qualification at 270 Vdc with resistive load. Since each application is unique, user is encouraged to verify rating in actual application.

### Product Specifications

**Contact Arrangement** — SPST-NO  
**Contact Form** — X  
**Rated Resistive Load @ 270 Vdc** — 90 A

- Weight, Nominal** — 1.66 lb (0.753 kg)

#### Note:

\*500 = at beginning of life which is 0 to 5,000 cycles, 400 = at end of life which is 5,000 to 10,000 cycles.

#### Contact Ratings\*

Maximum continuous current carry = 150 Amps

\*Based on data extrapolated from qualification at 270 Vdc with resistive load. Since each application is unique, user is encouraged to verify rating in actual application.

#### Coil Data

	AP150X	AP150P
Voltage, Nominal*	28 Vdc	28 Vdc
Pickup (Close), Max.	23 Vdc	20 Vdc
Dropout (Open), Max.	1.0 Vdc	20 Vdc
Coil Resistance @ 25°C (10%)	52 Ω	13 Ω**
Coil Duty, Recommended	Continuous	100 ms to Toggle
Coil Energy, Max.	0.10 J	0.10 J
Coil Clamping	2.5 x nom.	500W/ms TVS

\*12, 120 Vdc, or other special coil voltages available upon request.

\*\*2 coils are used, both are high common. Switch coil power from low side. High side coil power switch is a special order.

## AP265 (Form X, Electrically Held) & AP265P (Form P, Latching) 265 Amps

### CZONKA II Contactor

#### Product Facts

- 265 A carry, 1000 A overload @ 270 Vdc
- Bi-directional power switching
- Auxiliary Contacts
- Electrically held and latching coil versions
- Built-in coil drivers for electrically held (5W hold) and latching (coil pulser)
- Coil drivers EMC qualified to most of the requirements of MIL-STD-461D
- Versatile power, voltage, and current operating range
- Excellent for safety disconnect and transfer switch applications
- Designed for main generator loads
- Suitable for circuit protection and control
- Remote Power Controller version with overload protection available — contact factory for more information
- Hermetically-sealed contacts; can operate in harsh environments
- Space-rated version built in accordance with customers SCD
- Meets many requirements of MIL-PRF-32085

### Product Specifications

**Contact Arrangement Mains** —  
 AP265X — Form X — SPST-NO  
 Form A — 2 x SPST-NO  
 AP265P — Form X — SPST  
 Form A — 2 x SPST

**Polarity (Carry and Switching)** —  
 Bi-directional

**Rated Resistive Load @ 270 Vdc** — 265 A

**Continuous Current Carry, Max.** — 265 A

**Overload Current @ 270 Vdc, Max.** —  
 Make and Break — 600 A  
 Break Only — 1000 A

**Contact Resistance, Max.** —  
 0.3 mohm

**Dielectric at Sea Level (< 1 mA leakage)** —  
 Power Terminals to Terminal — 1,000 Vrms  
 Power Terminals to All Other Points — 1,000 Vrms

**Shock, 11ms, 1/2 Sine (Peak)** —  
 25 g

**Vibration, Sinusoidal (55-2000 Hz, Peak)** — 10 g

**Operating Ambient Temperature Range** — -55°C to +85°C

**Load Life @ 270 Vdc, Min.** —  
 See graph above

**Operate Time (28 Vdc, 25°C)** —  
 Close (Includes Bounce), Typ. —  
 AP265X — 20 ms  
 AP265P — 10 ms

**Bounce (After Close Only), Max.** —  
 5 ms

**Open (Includes Arcing), Max.** —  
 15 ms

**Insulation Resistance @ 500 Vdc, Min.** —  
 Initial/End of Life — 100 mohm/50 mohm

**Weight, Nominal** —  
 1.7 lb (0.77 kg)

## EV250-1A & 1B 400 Amps CZONKA-II EVX Make & Break Load Switching

### Product Facts

- Hydrogen dielectric for power switching high current loads
- 400 A carry, 2,500 A interrupt @ 320 Vdc
- Suited for circuit protection, control, battery switching, and main power safety disconnect
- Versatile power, voltage, and current operating range: 28-1800 Vdc tested
- Low-cost compact version for volume production applications. Requires external coil economizer (PWM or lower hold voltage)
- "Hammer effect" mechanism breaks light contact welds
- "Super-sealed" environment chamber uniquely protects ALL moving parts
- Can operate in harsh environments
- Moving contact rotates to provide fresh contact surface for low contact resistance and low power consumption
- Sealed control connector. Mating connector with flying leads Part Number 2005 available, see page 7-95
- Logic control enabled by external economizer Part Number 9913
- High temperature (135°C) model with 10 inch flying leads available (-4A — Call TE for sales drawing)
- Bi-directional power switching
- Fast operate and release time

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Contact Arrangement** — SPST-NO  
**Contact Form** — X  
**Continuous Current Carry, Max.** — 400 A; 6.5 Minutes — 500 A  
**Break Current @ 320 Vdc** — 2,500 A  
**Contact Resistance, Max.** — 0.0003 ohm  
**Contact Resistance, Typ.** — 0.0001 — 0.0002 ohm  
**Dielectric at Sea Level (Leakage < 1mA)** — 2,200 Vrms  
**Shock, 11ms, 1/2 Sine (Peak), Operating** — 30 g  
**Vibration, Sinusoidal (80-2000 Hz, Peak)** — 20 g  
**Operating Ambient Temperature Range** — -40°C to +85°C  
**Load Life** — See chart on next page  
**Operate Time, @ 25°C** —  
**Close (Includes Bounce), Typ.** — 30 ms  
**Bounce (After Close Only), Max.** — 5 ms  
**Open (Includes Arcing), Max.** — 15 ms  
**Insulation Resistance @ 500 Vdc, Min.** — 100 mohm  
**Weight, Nominal** — 1.54 lb (0.7 kg)

### Contact Ratings\*

\*For circuit conditions and actual data refer to the EV250 hot switch study. Since each application is unique, user is encouraged to verify rating in actual application.

### Coil Data\*\*\*

	EV250-1A	EV250-1B
Voltage, Nominal*	12 Vdc	24 Vdc
Pickup (Close), Max.	8.3 Vdc	16.6 Vdc
Continuous Hold, Max./Min.**	5.1/3.8 Vdc	10.2/7.6 Vdc
Dropout (Open), Min.	0.88 - 3.3 Vdc	2.4 - 6.6 Vdc
Coil Resistance @ 25°C, ±10%	3 Ω	12 Ω
Coil Energy, Max.	0.2 J	0.2 J
Coil Clamping	3 x nom.	3 x nom.

\*Do not apply continuously. Requires external coil economizer. Other special coil voltages available upon request.

\*\*At maximum continuous current and maximum ambient temperature. Hold voltage must be maintained within the limits specified to keep contacts closed and to prevent coil overheating.

\*\*\*Do not use a free wheeling diode or capacitor across the coil.

### Ordering Information

Sample Part Number ► **EV250-1 A**

805-220-2055.

## EV250-2A & 2B 400 Amps CZONKA II EVX Make & Break Load Switching

### Product Facts

- Hydrogen dielectric for power switching high current loads
- 400 A carry, 2,500 A interrupt @ 320 Vdc
- Suited for circuit protection, control, battery switching, and main power safety disconnect
- Versatile power, voltage, and current operating range: 28-1800 Vdc tested
- Internal coil economizer provides:
  - 4W typical hold power independent of temperature & voltage range
  - EMI spectrum tested and approved
  - Built-in coil suppression
- “Hammer effect” mechanism breaks light contact welds
- Hermetically “Super-sealed” environment chamber uniquely protects ALL moving parts
- Can operate in harsh environments
- Moving contact rotates to provide fresh contact surface for low contact resistance and low power consumption
- Sealed control connector. Mating connector with flying leads Part Number 2005 available
- Special versions available:
  - Economical (-8A/B) for light duty power switching (without arc blowout magnets)
  - 10 inch flying leads model (-7A)

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

## EV500 "BUBBA" Contactor 600 Amps, Make & Break Load Switching

### Product Facts

- Very high power sealed contactor
- Hydrogen dielectric for power switching high current loads
- Excellent for safety disconnect and transfer switch applications
- Suited for circuit protection control
- Hermetically "Super-sealed" environment uniquely protects contacts and all moving parts; can operate in harsh environments
- 600-1000 A continuous carry, dependent on temperature and conductors used
- 3,300 A interrupt, 1,000 A make, @ 320 Vdc
- 12 and 24 volt coil control options. Call TE for custom options
- 360 kW power switch capable
- 200°C hot power terminals capable
- Bi-directional power switching
- Auxiliary contacts optional
- Built-in dual power coil economizer, 8W holding typical
- Versatile power, voltage, and current operating range: 28-1800 Vdc\*

### Product Specifications

#### Contact Arrangement with Auxiliary Contacts —

**Contact Arrangement** — Form X — SPST-NO

**Auxiliary Contact (28 Vdc, 0.1 A)** — SPST-NO

**Rated Resistive Load @ 320 Vdc** — 300 Amps @85°C

**Continuous Current Carry, Max. @ 50°C** — 500 A

**Overload Current @ 320 Vdc** — Make — 1,300 A  
Break — 3,300 A

**Load Life, @ 320 Vdc, Min.** — See chart at right

**Contact Resistance, Max.** — End of Life — 0.0002 ohm

**Dielectric at Sea Level** — Power Terminals to Coil and All Other Points — 1,800 Vrms

**Shock, 11ms, 1/2 Sine (Peak)** — 30 g

**Vibration, Sinusoidal (55-2000 Hz, Peak)** — 5 g

**Operating Ambient Temperature Range** — -40°C to +85°C

**Operate Time, Including Bounce, Max., 25°C** — 40 ms

**Release Time, Max.** — 20 ms

**Bounce Time, Max.** — 5 ms

**Insulation Resistance @ 500 Vdc, Min.** — Initial — 100 mohm  
End of Life — 50 mohm

**Weight, Nominal** — 3.4 lb (1.52 kg)

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

### Contact Rating Notes:

1. Maximum continuous current carry = 500A @ 25°C = T<sub>A</sub>, derate 5A/°C for higher temp.
2. Maximum interrupt power (break only) = 1 MW @ 200mH inductance.

### Coil Data

Volts, Nominal	12 V	24 V
Pickup, Max. @ 65°C	9.9 Vdc	19.7 Vdc
Hold, Max. @ 65°C	8.5 Vdc	17 Vdc
Dropout, Min. @ -35°C	1.2 Vdc	2.4 Vdc
Coil Power** 25°C		
During Pickup (300 ms)	43 W	43 W
While Holding	8 W	8 W
Energy, Magnetic, Max.***	.26 J	.26 J

\*\*Two coils are employed for power economizing subsequent to pickup. During pickup both coils operate in parallel drawing 43 Watts momentarily. After pickup, the electronic economizing system leaves only the holding coil on, drawing 8 Watts @ 25°C. Economizing system includes transient voltage suppression.

\*\*\*Coil energy absorbed internally -4x nominal voltage.

### Electrical Life Cycles vs Power Switching

\*Failure Mode: Dielectric withstand voltage test @ 2000 Vdc, power terminal to terminal, leakage exceeds 1.0 mA. Current carry: 500 A @ 25°C. Derate 2.5 A/°C to 350 A @ 85°C for still air, no heat sink, AWG# 00 conductor.

## AP5/AP10 Relays

### Product Facts

- AP5 make and break 5 A; AP10 make and break 10 A @ 270 Vdc
- 20 A overload rating
- Latching actuator available for low power consumption
- Ideal for applications from 28 to 1000 Vdc
- Small size and weight
- Wide variety of mounting styles (see pages 54 and 55)
- No heat sinks required
- 2000 V isolation across open contacts
- Vacuum-sealed contacts; can operate in harsh environments
- Qualified to SAE ARD 50031
- Space-rated version built in accordance with customers SCD

### Notes:

\*The load terminals should always be connected as follows: Common Contact +; Other Contact -.  
 \*\*10 amps for PC board connection.

### Coil Data

Volts, Nominal	12	28	28 <sup>2</sup>	120
Pickup, Max. <sup>1</sup>	10 Vdc	20 Vdc	16 Vdc	85 Vdc
Dropout, Min.	.3-6 Vdc	.7-12 Vdc	N/A	5-55 Vdc
Coil Resistance (±10%)	53 Ω	290 Ω	80 Ω	4700 Ω

Coil resistance rated at 25°C

### Notes:

- Value for AP5C is 24 for 28 Vdc coil & 100 for 120 Vdc coil
- Latching

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

### AP5A, AP5B, & AP5C Relays — 5 Amps

#### Product Specifications

AP44P — 15 Amps

Product Facts

- 15 A make and break @ 270 Vdc
- 45 A carry
- 60 A overload rating
- Ideal for high voltage applications from 28 to 270 Vdc
- Latching actuator for low power consumption
- 2000 V isolation across open contacts
- Small size and weight
- Space-rated version built in accordance with customers SCD
- Meets many requirements of MIL-PRF-32085

Product Specifications

## PD10 Make & Break Load Switching

### Product Facts

- Excellent for control applications
- PCB and panel mountings
- Rugged design for the most demanding applications, including seismic shock
- Small size and weight
- Low power consumption
- No heat sinks required
- Vacuum-sealed; can operate in explosive and harsh environments
- 2000 V isolation across open contacts
- Vacuum dielectric for power switching

Panel mount version shown above is applicable to both PD5 and PD10. For PD10, the two power terminals are .064" (1.63) diameter. Refer to PD5 for PCB mount dimensions.

### Product Specifications

#### Release Time, Max., Including Bounce @ 25°C —

PD10A and PD10B — 10 ms  
 PD10P\*\*\* — 6 ms

#### Insulation Resistance @ 500 Vdc, Min. —

Initial/End of Life — 100 mohm/50 mohm

#### Weight, Nominal —

71 g (.156 lb)

#### Notes:

\*\*Contact TE for availability of other contact forms

\*\*\*Not available in package shown, package is the same as the K41P.

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

### Contact Ratings\*

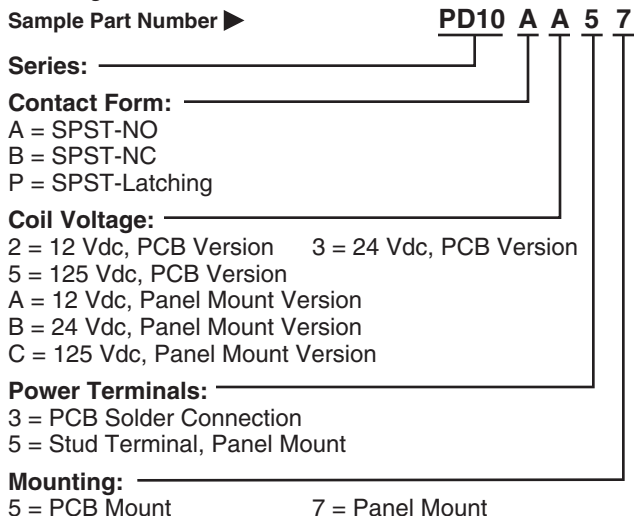

\*Based on extrapolated data. Since each application is unique, user is encouraged to verify rating in actual application. The load terminals should always be connected as follows: Common Contact (A2) positive; Other Contact negative.

### Coil Data

Nominal Volts DC	12 Vdc	24 Vdc	125 Vdc
Max. Coil Voltage	14 Vdc	28 Vdc	130 Vdc
Pickup, Max. @ 85°C	8 Vdc	16 Vdc	80 Vdc
Hold, Min. @ 85°C	3.3 Vdc	10 Vdc	33 Vdc
Dropout, Min. @ -40°C	.5 Vdc	1 Vdc	5 Vdc
Coil Resistance (±10%)	70 Ω	290 Ω	4700 Ω

Ratings listed are for 25°C, sea level conditions

### Ordering Information

**K45 Series Make & Break Load Switching — 1.5 - 2 kV Relays**

**K45C**

**Product Facts**

- Small, low profile 2 kV relay
- Vacuum dielectric for power switching low current loads
- Single pole, double throw contacts
- Widely used in H.F. communication equipment
- Meets requirements of MIL-R-83725
- Low power consumption

**Product Specifications**

**Contact Arrangement** — SPDT

**Contact Form** — C

**Test Voltage, DC or 60 Hz (Peak)** — 4 kV

**Rated Operating Voltage (Peak)** — DC or 60 Hz — 2 kV  
 2.5 MHz — 1.8 kV

Test Voltage, DC or 60 Hz (Peak) — 6 kV

Rated Operating Voltage (Peak) —

DC or 60 Hz — 5 kV  
2.5 MHz — K41P — 4.5 kV  
                  K41R — 4.0 kV  
16 MHz — K41P — 3.5 kV  
                  K41R — 3.2 kV  
32 MHz — K41P — 2.8 kV  
                  K41R — 2.5 kV

Continuous Carry Current, Max. —

DC or 60 Hz — 30 A  
2.5 MHz — K41P — 20 A  
                  K41R — 16 A  
16 MHz — K41P — 13 A  
                  K41R — 10 A  
32 MHz — K41P — 10 A  
                  K41R — 6 A  
Coil Hi-Pot (Vrms, 60 Hz) — 500 A

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

Contact Capacitance —

Between Open Contacts —  
K41P — 1.2 pF  
K41R — 1.6 pF  
Open Contacts to Ground —  
K41P — 1.2 pF  
K41R — 1.6 pF

Contact Resistance, Max. — 0.02 ohm

Operate Time, Max. — 6 ms

Release Time, Max. — N/A

Shock, 11ms, 1/2 Sine (Peak) —

K41P — 50 g  
K41R — 30 g

Vibration —

Peak — 10 g (55 to 2000 Hz)

Operating Ambient Temperature Range —

-55°C to +125°C

Insulation Resistance —

Initial — 10 gigaohms

Mechanical Life — 1 million cycles

Weight, Nominal — 28.35 g (1.0 oz.)

Coil Data

Volts, Nominal	26.5 Vdc
Reset & Latch, Max.	16 Vdc
Dropout	N/A
Coil Resistance (±10%)	80 Ω

Ratings listed are for 25°C, sea level conditions.

**KM-17 Series Make Only Load Switching — 7.5 kV Relays**

**Product Facts**

- Double pole, double throw contacts
- SF-6 gas-filled for ideal discharge waveform
- High voltage flying leads
- Tabs for easy mount
- Widely used in defibrillator applications

**Product Specifications for KM-17**

- Contact Arrangement** — DPDT
- Contact Form** — 2C
- Test Voltage, DC or 60 Hz (Peak)** — 14 kV
- Rated Operating Voltage (Peak)** — DC or 60 Hz — 7.5 kV
- Continuous Carry Current, Max.** — DC or 60 Hz — 10 A  
Coil Hi-Pot (Vrms, 60 Hz) — 500 A
- Contact Capacitance** — Between Open Contacts — N/A  
Open Contacts to Ground — N/A
- Contact Resistance, Max.** — 0.5 ohm\*
- Operate Time, Max.** — 20 ms
- Release Time, Max.** — 20 ms
- Shock, 11ms, 1/2 Sine (Peak)** — 10 g

- Vibration** — Peak — 10 g (55 to 500 Hz)
- Operating Ambient Temperature Range** — -20°C to +65°C
- Insulation Resistance** — Initial — 10 gigaohms
- Mechanical Life** — 1010,000 cycle
- Weight, Nominal** — KM-17 — 311.8 g (11 oz.)

**Ordering Information**

**Coil Data**

Nominal Volts DC	12 Vdc	26 Vdc
Pickup, Max.	8 Vdc	16 Vdc
Dropout	.5-5 Vdc	1-10 Vdc
Coil Resistance (±10%)	12 Ω	48 Ω

Ratings listed are for 25°C, sea level conditions  
Coils are not for continuous duty.

K47 Series Make & Break Load Switching — 8 kV Relays

**K47A**

**Product Facts for K47A**

- Widely used in antenna coupler applications
- Short actuator, low profile, 8 kV relay
- Vacuum dielectric for power switching low current loads
- Normally open contacts
- Meets requirements of MIL-R-83725

**K47B**

**Product Facts for K47B**

- Normally closed version of K47
- Vacuum dielectric for power switching low current loads
- 707 Ohm coil for low power consumption
- Meets requirements of MIL-R-83725
- QPL version available, M83725/18-003

**Product Specifications for K47A and K47B**

**Contact Arrangement —**

- K47A — SPST-NO
- K47B — SPST-NC

**Contact Form —**

- K47A — A
- K47B — B

**Test Voltage, DC or 60 Hz (Peak) —**

- 9 kV
- Rated Operating Voltage (Peak) —**
- DC or 60 Hz — 8 kV
- 2.5 MHz — 7.5 kV
- 16 MHz — 7 kV
- 32 MHz — 5 kV

**Continuous Carry Current, Max. —**

- DC or 60 Hz — 12 A
- 2.5 MHz — 10 A
- 16 MHz — 5 A
- 32 MHz — 3 A
- Coil Hi-Pot (Vrms, 60 Hz) — 500 A

**Contact Capacitance —**

- Between Open Contacts — 1.2 pF
- Open Contacts to Ground — 1.2 pF

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

**Contact Resistance, Max. —**

0.03 ohm

## HC Series — 8 kV Relays

**HC-2**  
No Load Switching

**HC-4**  
Make & Break Load Switching

### Product Facts for HC-2

- Vacuum dielectric and copper contacts for high current carry rating of 25 Amps
- Not designed for power switching
- Stable, low contact resistance
- Meets requirements of MIL-R-83725

### Product Facts for HC-4

- Tungsten contacts for long life in power switching applications
- Meets requirements of MIL-R-83725
- Vacuum dielectric for arc suppression when making or breaking a load

**HC-6**  
Make Only Load Switching

### Product Facts for HC-6

- Tungsten contacts for switching high in-rush loads
- SF-6 gas-filled for capacitive discharge applications
- Suitable for ESD testing applications
- Tungsten contacts for long life in power switching applications

### Product Specifications for HC-2, HC-4 and HC-6

- Contact Arrangement** — SPDT
- Contact Form** — C
- Test Voltage, DC or 60 Hz (Peak)** — 10 kV
- Rated Operating Voltage (Peak)** — DC or 60 Hz — 8 kV
- Continuous Carry Current, Max.** — DC or 60 Hz — HC-2 — 25 A RMS  
HC-4 — 15 A RMS  
HC-6 — 8 A RMS
- Coil Hi-Pot (Vrms, 60 Hz)** — 500 A RMS
- Contact Capacitance** — Between Open Contacts — N/A  
Open Contacts to Ground — N/A
- Contact Resistance, Max.** — HC-2 — 0.01 ohm  
HC-4 — 0.02 ohm  
HC-6 — 0.5 ohm\*
- Operate Time, Max.** — 6 ms
- Release Time, Max.** — 6 ms

**Shock, 11ms, 1/2 Sine (Peak)** — 50 g

**Vibration** — Peak — 10 g (55 to 2000 Hz)

**Operating Ambient Temperature Range** — -55°C to +125°C

**Mechanical Life** — HC-2 and HC-4 — 2 million cycles  
HC-6 — 1 million cycle

**Weight, Nominal** — 39.69 g (1.4 oz.)

\*Contact resistance for gas-filled relays is measured at 28 Vdc, 1 Amp

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

### Coil Data

Nominal Volts DC	12 Vdc	26.5 Vdc	115 Vdc
Pickup, Max.	8 Vdc	16 Vdc	80 Vdc
Dropout	.5-5 Vdc	1-10 Vdc	5-50 Vdc
Coil Resistance (±10%)	80 Ω	335 Ω	6000 Ω

Ratings listed are for 25°C, sea level conditions

### H-18 Series Make & Break Load Switching — 8 kV Relays

**Product Facts**

- Smallest DPDT high voltage relay
- Vacuum dielectric for power switching low current loads
- 8 kV rating; carries 2 Amps at 32 MHz
- Tungsten contacts for power switching low current loads
- Meets requirements of MIL-R-83725

**Product Specifications**

**Contact Arrangement** — DPDT

**Contact Form** — 2C

**Test Voltage, DC or 60 Hz (Peak)** — 10 kV

**Rated Operating Voltage (Peak)** —  
 DC or 60 Hz — 8 kV  
 2.5 MHz — 5 kV  
 16 MHz — 3 kV  
 32 MHz — 2 kV

**Continuous Carry Current, Max.** —  
 DC or 60 Hz — 10 A  
 2.5 MHz — 7 A  
 16 MHz — 3 A  
 32 MHz — 2 A  
 Coil Hi-Pot (Vrms, 60 Hz) — 500 A

**Contact Capacitance** —  
 Between Open Contacts — 0.8 pF  
 Open Contacts to Ground — 1.5 pF

**Contact Resistance, Max.** — 0.02 ohm

**Operate Time, Max.** — 15 ms

**Release Time, Max.** — 15 ms

**Shock, 11ms, 1/2 Sine (Peak)** — 30 g

**Vibration** —  
 Peak — 10 g (55 to 500 Hz)

**Operating Ambient Temperature Range** — -55°C to +125°C

**Mechanical Life** — 1 million cycles

**Weight, Nominal** — 70.87 g (2.5 oz.)

**Coil Data**

Volts, Nominal DC	12 V	26.5 V	115 V
Pickup, Max.	8 Vdc	16 Vdc	80 Vdc
Dropout	.5-5 Vdc	1-10 Vdc	5-50 Vdc

**K44P Make & Break Load Switching — 9 kV Relays**

**Product Facts**

- Single pole, single throw contacts with latching actuator
- Vacuum dielectric for power switching low current loads
- 20 G vibration rating
- Carries 50 Amps at DC
- Space rated versions available
- Meets requirements of MIL-R-83725

**Product Specifications**

**Contact Arrangement** —

SPST-Latching

**Contact Form** — P

**Test Voltage, DC or 60 Hz (Peak)** — 9kVdc

K81 A/B Series Make & Break Load Switching — 10 kV Relays

Product Facts

- 10 kV PC board-mount relay
- Vacuum dielectric for power switching low current loads
- Flying leads or PCB mount for high voltage connections
- Meets requirements of MIL-R-83725
- Completely sealed; suitable for test equipment
- Panel mount available for ease of mounting

Product Specifications

- Contact Arrangement** —  
 K81A — SPST-NO  
 K81B — SPST-NC
- Contact Form** —  
 K81A — A  
 K81B — B
- Test Voltage, DC or 60 Hz (Peak)** —  
 11 kV
- Rated Operating Voltage (Peak)** —  
 DC or 60 Hz — 10 kV
- Continuous Carry Current, Max.** —  
 DC or 60 Hz — 5 A, 20 A or 30 A 1  
 Coil Hi-Pot (Vrms, 60 Hz) — N/A
- Contact Resistance, Max.** —  
 0.03 ohm
- Operate Time, Max.** — 10 ms
- Release Time, Max.** — 10 ms
- Shock, 11ms, 1/2 Sine (Peak)** —  
 30 g
- Vibration** —  
 Peak — 10 g (55 to 500 Hz)

Operating Ambient Temperature Range — -55°C to +85°C

Mechanical Life — 2 million cycles

Weight, Nominal — 56.7 g (2 oz.)

Notes:

1. PC pin versions carry 5 or 20 Amps, see part number at right. Flying lead and panel versions carry 30 Amp.
- \*Power terminal on 20 Amp version is a larger diameter than on the 5 Amp version (.025 = 5 Amp, .064 = 20 Amp)

Coil Data

Volts, Nominal DC	12 V	26.5 V	115 V
Pickup, Max.	8 Vdc	16 Vdc	80 Vdc
Dropout	.5-5 Vdc	1-10 Vdc	5-50 Vdc
Coil Resistance (±10%)	70 Ω	290 Ω	4700 Ω

Ratings listed are for 25°C, sea level conditions

## K81C Series Make & Break Load Switching — 10 kV Relays

### Product Facts

- SPDT version of K81
- Vacuum dielectric for power switching low current loads
- Flying lead version will carry 10 Amps continuous current
- PCB mount version will carry 5 Amps continuous current

### Product Specifications

- Contact Arrangement** — SPDT
- Contact Form** — C
- Test Voltage, DC or 60 Hz (Peak)** — 11 kV
- Rated Operating Voltage (Peak)** — DC or 60 Hz — 10 kV

- Continuous Carry Current, Max.** — DC or 60 Hz — See Note 1
- Coil Hi-Pot (Vrms, 60 Hz)** — N/A
- Contact Resistance, Max.** — 0.05 ohm
- Operate Time, Max.** — 10 ms
- Release Time, Max.** — 10 ms

- Shock, 11ms, 1/2 Sine (Peak)** — 30 g
- Vibration** — Peak — 10 g (55 to 500 Hz)
- Operating Ambient Temperature Range** — -55°C to +85°C
- Mechanical Life** — 2 million cycles
- Weight, Nominal** — 70.87 g (2.5 oz.)

#### Note:

- 1. 5 Amp carry for PC pin versions. 30 Amp carry for flying lead versions.

### Coil Data

K43 Series Make & Break Load Switching — 10 kV Relays

**K43A and K43B**  
Product Facts for  
K43A and K43B

- 10 kV, 25 Amps continuous current relay
- RF ratings to 32 MHz
- Vacuum dielectric for power switching low current loads
- 2 million cycle mechanical life
- QPL versions available, M83725/17 & M83725/10

**K43C**  
Product Facts for K43C

- SPDT version of K43
- Vacuum dielectric for power switching low current loads
- Flange mounting available
- Carries 10 Amps at 32 MHz
- Meets requirements of MIL-R-83725
- QPL version available, M83725/16

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

KC Series Make & Break Load Switching — 15 kV Relays

KC-14

KC-18

Product Facts for KC-14 and KC-18

- Specifically designed for load switching applications
- Can power switch and isolate loads
- Replaces KILOVAC KC-8 and KC-12
- Meets requirements of MIL-R-83725

Product Specifications for KC-14 and KC-18

- Contact Arrangement** — SPDT
- Contact Form** — C
- Test Voltage, DC or 60 Hz (Peak)** — 17 kV
- Rated Operating Voltage (Peak)** — DC or 60 Hz — 15 kV
- Continuous Carry Current, Max.** — DC or 60 Hz — 30 A
- Coil Hi-Pot (Vrms, 60 Hz) — 500 A
- Contact Capacitance** — Between Open Contacts — 0.5 pF
- Open Contacts to Ground — 1 pF
- Contact Resistance, Max.** — 0.025 ohm
- Operate Time, Max.** — 15 ms
- Release Time, Max.** — 9 ms

- Shock, 11ms, 1/2 Sine (Peak)** — 50 g
- Vibration** — Peak — 10 g (55 to 500 Hz)
- Operating Ambient Temperature Range** — -55°C to +125°C
- Mechanical Life** — 1 million cycles
- Weight, Nominal** — 85 g (3 oz.)

\*Hot Switching, Resistive Load Life

Voltage	Current	Load Life Operations
330 Vdc	17 Amps	10,000
330 Vdc	5 Amps	100,000
5,000 Vdc	2 Amps	100,000
10,000 Vdc	1 Amps	50,000

\*Ratings are for normally open contacts only. No testing has been performed on normally closed contacts.

Coil Data

Volts, Nominal DC	12 V	26.5 V	115 V
Pickup, Max.	8 Vdc	16 Vdc	80 Vdc
Dropout	.5-5 Vdc	1-10 Vdc	5-50 Vdc
Coil Resistance (±10%)	48 Ω	180 Ω	2900 Ω

Ratings listed are for 25°C, sea level conditions

For factory-direct application assistance, dial 800-253-4560, ext. 2055, or 805-220-2055.

KC Series Make & Break Load Switching — 15 kV Relays (Continued)

**KC-2**  
No Load Switching

**Product Facts**

- Vacuum dielectric for low and stable contact resistance
- Carries 50 Amps at DC; 10 Amps at 32 MHz
- Not designed for power switching

**KC-8**

**Product Facts for KC-8**

- Not recommended for new design. See KC-14 on page 7-82 for replacement.

**KC-11**  
No Load Switching

**Product Facts**

- Threaded base version of KC-2
- Vacuum dielectric for low leakage current applications

**KC-12**

**Product Facts**

- Not recommended for new design. See KC-18 on page 7-67 for replacement.
- Vacuum dielectric for power switching low current loads

**Product Specifications for KC-2, KC-8, KC-11 and KC-12**  
Contact Arrangement — SPDT  
Contact Form — C

Test Voltage, DC or 60 Hz (Peak) — 17 kV

Rated Operating Voltage (Peak) — DC or 60 Hz — 15 kV  
2.5 MHz — KC-2 and KC-11 — 12 kV

KC Series Make Only Load Switching — 15 kV Relays (Continued)

KC-15

Product Facts

- SF-6 gas-filled for power switching on the “make”
- Long load life in capacitive discharge
- Recommended for ESD testing and safety interlock applications
- Meets requirements of MIL-R-83725

KC-16

Product Facts

- Threaded base version of KC-15
- SF-6 gas-filled for power switching on the “make”
- 15 kV rating
- Meets requirements of MIL-R-83725

Product Specifications for KC-15 and KC-16

- Contact Arrangement — SPDT
- Contact Form — C
- Test Voltage, DC or 60 Hz (Peak) — 17 kV
- Rated Operating Voltage (Peak) — DC or 60 Hz — 15 kV
- Continuous Carry Current, Max. — DC or 60 Hz — 12 A
- Coil Hi-Pot (Vrms, 60 Hz) — 500 A
- Contact Capacitance — Between Open Contacts — N/A
- Open Contacts to Ground — N/A
- Contact Resistance, Max. — 1.0 ohm\*
- Operate Time, Max. — 15 ms
- Release Time, Max. — 9 ms
- Shock, 11ms, 1/2 Sine (Peak) — 50 g
- Vibration — Peak — 10 g (55 to 500 Hz)

- Operating Ambient Temperature Range —  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$
- Mechanical Life — 1 million cycles
- Weight, Nominal — 85 g (3 oz.)

Note:  
\*Contact resistance for gas-filled relays measured 28 Vdc, 1 Amp

## H-26 Series Make & Break Load Switching — 15 kV Relays

### Product Facts

- Highly reliable four pole double throw relay
- Used to switch multiple loads and for polarity reversal
- Vacuum dielectric for power switching low current loads
- Meets requirements of MIL-R-83725

### Product Specifications

**Contact Arrangement** — 4PDT

**Contact Form** — 4C

**Test Voltage, DC or 60 Hz (Peak)** — 17 kV

**Rated Operating Voltage (Peak)** —

DC or 60 Hz — 15 kV

2.5 MHz — 12 kV

16 MHz — 10 kV

32 MHz — 7 kV

**Continuous Carry Current, Max.** —

DC or 60 Hz — 30 A

2.5 MHz — 10 A

16 MHz — 6 A

32 MHz — 4 A

Coil Hi-Pot (Vrms, 60 Hz) — 500 A

**Contact Capacitance** —

Between Open Contacts — 1 pF

Open Contacts to Ground — 2.5 pF

**Contact Resistance, Max.** —

0.02 ohm

**Operate Time, Max.** — 30 ms

**Release Time, Max.** — 30 ms

**Shock, 11ms, 1/2 Sine (Peak)** —

30 g

**Vibration** —

Peak — 10 g (55 to 500 Hz)

**Operating Ambient Temperature**

**Range** — -55°C to +125°C

**Mechanical Life** — 100,000 cycles

**Weight, Nominal** — 340 g (12 oz.)

### Coil Data

Volts, Nominal DC	12 V	26.5 V	115 V

H-19/17 Series Make & Break Load Switching — 20/25 kV Relays

H-19

Product Facts

- 20 kV operating voltage
- Vacuum dielectric and tungsten contacts for power switching low current loads
- Double pole, double throw contacts
- Available with corona shield connectors
- Meets requirements of MIL-R-83725

H-17

Product Facts

- Will isolate 12 kV at 32 MHz
- Tungsten contacts suitable for power switching low current loads
- Available with corona shield connectors
- Meets requirements of MIL-R-83725
- QPL version available, M83725/2

Product Specifications for H-19 and H-17

Contact Arrangement —

## K62 Series Make & Break Load Switching — 25 kV Relays

### K62A and K62B Product Facts

- 25 kV relay with flying leads for ease of installation
- Vacuum dielectric and tungsten contacts for power switching low current loads
- Meets requirements of MIL-R-83725

### K62C Product Facts

- SPDT version of K62
- Vacuum dielectric for power switching low current loads
- Carries 18 Amps continuous current
- Meets requirements of MIL-R-83725

### Product Specifications for K62A, K62B and K62C

#### Contact Arrangement —

K62A — SPST-NO  
K62B — STST-NC  
K62C — SPDT

K64 & H-25 Series — 50 kV Relays

**K64C**

**Make Only Load Switching**

**Product Facts for K64C**

- SF-6 gas-filled relay ideal for high voltage isolation or “make only” power switching
- 50 kV rating in compact package
- High voltage leads and encapsulation allow full operation in air

**H-25**

**Make & Break Load Switching**

**Product Facts for H-25**

- Vacuum relay provides low contact resistance
- Vacuum dielectric for power switching low current loads

**Product Specifications for K64C and H-25**

**Contact Arrangement** — SPDT

**Contact Form** — C

**Test Voltage, DC or 60 Hz (Peak)** —

K64C — 55 kV

H-25 — 60 kV

## Mounting Methods

KILOVAC “stacked ceramic” series relays can be easily mounted in any of the several ways shown below. The relay base should be mounted to a ground potential for high voltage applications. KILOVAC relays are not position sensitive and can be mounted in any orientation.

## Application Notes for EV/LEV Contactors

### Introduction - Product Capabilities and Typical Applications

TE KILOVAC EV and LEV contactors are designed to be the highest performance, smallest and lightest weight, sealed High Voltage contactors in the industry. With current carrying capability of up to 500A and power switching up to 200kW, they are used in a variety of industrial, marine, automotive, and commercial applications. Primarily designed to switch resistive loads, they can be used in a variety of circuit applications bearing in mind a few important considerations. This application note focuses on a few of the more common circuit configurations, and what to consider when selecting, installing and using the contactors.

### 1. Installation

EV/LEV contactors can be mounted in any orientation, and due to the nature of their hermetic seal and isolated enclosure, can be mounted in close proximity to other equipment. However, care must be taken with regard to the termination of the power cables to the main terminals. It is important that the main power connection lugs are mated directly to the terminal seats. Be sure that the hardware stackup is in the proper order, and that washers and other spacers are not placed between the lug and terminal seat. Extraneous connection resistance can cause considerable power dissipation and terminal heating at high current carry.

Refer to Figure 1 and Table I for the recommended hardware stackup and torque.

Figure 1  
Main Terminal Hardware Installation

THREAD ENGAGEMENT(turns)	TORQUE
Less than 5	Use longer fastener
5 TO 7	7.9 Nm (70 in-lb) MAX
7 TO 8	9.0 Nm (80 in-lb) MAX
8 TO 11	9.0 Nm (80 in-lb) 11 Nm (100 in-lb) MAX
Mounting Feet (all)	1.7-3.3 Nm (30-35 in-lb)

Table I

Use the same guidelines and torque maximum values for stud terminal contactors as well.

### 2. Coils, Drive Circuits and Coil Economizing

Since the power required to close the contacts is generally much greater than the required holding power, many KILOVAC contactors can be packaged with low-profile coils that utilize either an electronic economizer (switchmode PWM), or mechanical cut-throat economizer. The economizer lets-through the higher power required for contact closure, then reduces the power for holding, greatly reducing the coil power consumption and heating. These circuits are packaged with the contactor, and in most cases include coil suppression components as well. For customers who wish to provide their own circuitry, TE can provide suggestions for driving the coils of all versions of contactors. Single coil, uneconomized products are also available in the LEV product line. These coils are designed to operate at nominal power over all specified voltage and temperature ranges without economizing circuitry. DC Coils up to 400Vdc and AC coils with integrated converters are available up to 240Vac.

### 3. Load Types and Power Switching Recommendations

In general, all EV/LEV contactors are designed primarily for connection and interruption of resistive loads and slightly inductive loads ( $L/R < 1ms$ ). High currents (up to 2000A) can be interrupted in case of circuit faults, and high continuous currents upwards of 500A can be maintained through closed contacts. Some important points to consider are:

- Closing into current spikes due to uncharged filter capacitors. Capacitors should be pre-charged whenever possible to avoid excessive contact erosion and nuisance welds. Keep inrush current spikes below 650A at all times. Care should also be taken when considering other high-inrush loads such as lamps or motors.
- Large current spikes through closed contacts. Large current spikes through closed contacts in excess of 3000A can sometimes cause spot welding or contact levitation.
- Circuit inductance. Contactor break-arcs generally last as long as it takes to dissipate the stored inductive energy of the load ( $t(arc) = 1.1 * L/R$ ).

Longer arcs due to circuit inductance can accelerate contact wear, and in extreme cases, can cause contactor failure. TE recommends that the time constant of the load be less than 1ms for safe operation and maximum life.

Contactor life is a function of the power level switched. Higher make/break currents erode contact materials faster and accelerate loss of dielectric withstanding between the open contacts. Figure 2 can be used as a guideline for estimating product life at a given load.

Application Notes for EV/LEV Contactors (Continued)

Figure 2  
Life Cycles vs. Power Switched

4. Recommended Conductor Sizes for Continuous Current Carry

Many sources exist for recommending the proper conductor size for a given current carry. Many of these sources are concerned primarily with wire insulation safety issues. Cable bundling, conduit types, length of runs, etc., are all important considerations. With regard to a contactor placed in line with the conductors, it is important to make sure that the wire size is sufficient such that the contactor terminals themselves do not overheat, leading to a failure of the device. In most cases, the primary path for removal of heat from the contactor terminals is the conductors themselves. Convection to atmosphere and conduction via the base mountings play a lesser role in this type of contactor due to the nature of the construction. TE has performed basic characterization of many of the styles of contactors discussed herein, and the data is presented in Figure 3. The recommended maximum power terminal temperature for all EV/LEV contactors is 150° C continuous and 175° C for 1 hour.

Figure 3  
Recommended Conductor Sizes

For applications requiring larger conductors than can practically be installed with single 4/0 AWG cable and lugs, adapter buss extensions can be obtained from TE.

5. Auxiliary Circuits

Auxiliary contacts are available on most models. Configurations available are: SPST-NO, SPST-NC and SPDT. Auxiliary contacts are rated at 125Vac/ 1A or 30Vdc/3A. Contacts with gold plating for low level loads are also available. For circuit voltage below 10V/0.1A, gold contacts are recommended.

The auxiliary contact actuating method will indicate the true position of the main contacts. The auxiliary contact actuation is directly coupled to the main contact moving bridge, and will not indicate “open” unless both contact gaps of the double-make, Form X contact are fully disconnected. Keep in mind that the auxiliary contact is mainly a status indication, and should not be used to directly power other loads such as a relay coil or high power lamp load.

6. Environmental Considerations

All KILOVAC contactors are characterized for operation in thermal, vibration, moisture and fluid environments. Consult the appropriate data sheet for limits concerning shock, vibration, temperature range and altitude limits. In some cases, there may be variations in limits with regard to “specified operation” or “survival only”.

7. Custom Configurations

Most parts can be ordered with a variety of combinations of main terminal and coil configurations, auxiliary contacts, interface connectors, coil voltages, etc. If you have a requirement for a particular configuration not shown on the data sheet, consult the factory for information regarding custom configurations.

8. Summary

This Application Note is meant to address some of the more common questions regarding the use of EV/LEV contactors. In all cases, please refer to the applicable product data sheet for specific information. Also, Product Application Engineers are available to answer questions regarding these products by calling 800-253-4560 x2055, or 805-220-2055.

## Application Notes for MAP/CAP Contactors

### Introduction - Product Capabilities And Typical Applications

TE KILOVAC MAP/CAP contactors are designed to be the highest performance, smallest and lightest weight, sealed High Voltage contactors in the industry. With current carrying capability of up to 500A and power switching up to 200kW, they are used in a variety of commercial aerospace and military applications. Primarily designed to switch resistive loads, they can be used in a variety of circuit applications bearing in mind a few important considerations. This application note focuses on a few of the more common circuit configurations, and what to consider when selecting, installing and using the contactors.

#### 1. Installation

TE KILOVAC MAP/CAP contactors can be mounted in any orientation, and due to the nature of their hermetic seal and isolated enclosure, can be mounted in close proximity to other equipment. However, care must be taken with regard to the termination of the power cables to the main terminals. It is important that the main power connection lugs are mated directly to the terminal seats. Be sure that the hardware stackup is in the proper order, and that washers and other spacers are not placed between the lug and terminal seat. Extraneous connection resistance can cause considerable power dissipation and terminal heating at high current carry. Refer to Figure 1 and Table I for the recommended hardware stackup and torque.

Figure 1  
Main Terminal Hardware Installation

THREAD ENGAGEMENT(turns)	TORQUE
Less than 5	Use longer fastener
5 TO 7	7.9 Nm (70 in-lb) MAX
7 TO 8	9.0 Nm (80 in-lb) MAX
8 TO 11	9.0 Nm (80 in-lb) 11 Nm (100 in-lb) MAX
Mounting Feet (all)	1.7-3.3 Nm (30-35 in-lb)

Table I

Use the same guidelines and torque maximum values for stud terminal contactors as well.

#### 2. Coils, Drive Circuits and Coil Economizing

Since the power required to close the contacts is generally much greater than the required holding power, many contactors can be packaged with low-profile coils that utilize either an electronic economizer (switchmode PWM, electronic cut-throat), or mechanical cutthroat economizer. The economizer lets-through the higher power required for contact closure, then reduces the power for holding, greatly reducing the coil power consumption and heating. These circuits are packaged with the contactor, and in most cases include coil suppression components as well. For customers who wish to provide their own circuitry, TE can provide suggestions for driving the coils of all versions of contactors. Four types of actuators are typically used:

- a. Single Coil requiring customer economizer circuit
- b. Single Coil with supplied electronic economizer
- c. Dual Coil with supplied mechanical “cut-throat” economizer
- d. Dual Coil with supplied electrical “cut-throat” economizer

The advantages of each type of coil circuit are shown in Table II.

Type	Advantage
Electronic PWM	Operates over widest voltage range
Electronic CT	Simple, Robust, EMC Compliant
Mechanical CT	Simple, robust, fastest operate time
Single Coil - (customer economized)	Flexibility, lower initial cost

Table II  
Coil Configurations

#### 3. Load Types and Power Switching Recommendations

In general, all MAP/CAP contactors are designed primarily for connection and interruption of resistive loads and slightly inductive loads ( $L/R < 1\text{ms}$ ). High currents (up to 2000A) can be interrupted in case of circuit faults, and high continuous currents upwards of 500A can be maintained through closed contacts. Some important points to consider are:

- a. Closing into current spikes due to uncharged filter capacitors. Capacitors should be pre-charged whenever possible to avoid excessive contact erosion and nuisance welds. Keep inrush current spikes below 650A at all times. Care should also be taken when considering other high-inrush loads such as lamps or motors.

### 6. Environmental Considerations

All TE KILOVAC contactors are characterized for operation in thermal, vibration, moisture and fluid environments. Consult the appropriate data sheet for limits concerning shock, vibration, temperature range and altitude limits. In some cases, there may be variations in limits with regard to "specified operation" or "survival only".

### 7. Custom Configurations

Most parts can be ordered with a variety of combinations of main terminal and coil configurations, auxiliary contacts, interface connectors, coil voltages, etc. If you have a requirement for a particular configuration not shown on the data sheet, consult the factory for information regarding custom configurations.

### 8. Summary

This Application Note is meant to address some of the more common questions regarding the use of MAP/CAP contactors. In all cases, please refer to the applicable product data sheet for specific information.

Also, Product Application Engineers are available to answer questions regarding these products by calling 800-253-4560 x2055, or 805-220-2055.

## Application Notes on Coil Power Economizing using PWM Circuits

### Introduction - Reducing Coil Power Dissipation through the use of PWM Circuits

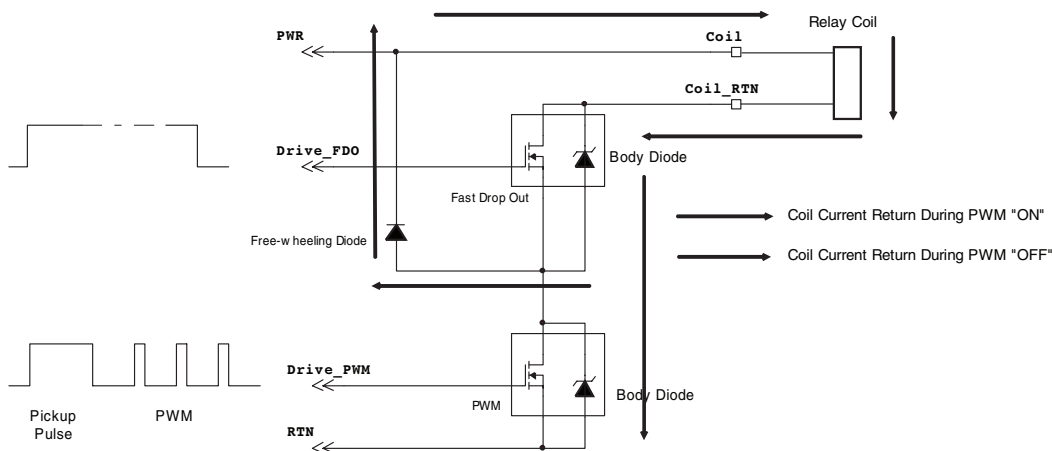

The coil power of most TE KILOVAC Relays and Contactors can be reduced after Pickup by using several economizing schemes. One of the most popular methods used in many of our standard products, and one that is suitable for implementation by customers, is the Pulse Width Modulated (PWM) coil driver.

### 1. Typical PWM Coil Drive Circuit

Figure 1 shows a typical PWM coil drive/economizer circuit.

In the circuit shown, the "Fast Dropout" (FDO) and PWM driver are energized simultaneously for a sufficient time to allow the contacts to fully close. The PWM driver is then modulated such that the stored coil energy is utilized during the PWM driver "OFF" time to circulate holding current through the FDO driver and freewheeling diode. Since the holding current is much lower than the current required for pickup, the holding power for the contacts is greatly reduced.

The Fast Dropout circuit allows for the switching in/out of the "free-wheeling" diode. When power is removed, the FDO and PWM drivers will turn off, causing the stored energy of the coil to be rapidly dissipated in the body diodes. This minimizes the decay time of the coil current and facilitates a fast opening of the relay contacts.

Fast Drop-out FET stays on during operation. FDO and Power can be applied simultaneously

Filtering/Protection should be applied to FET gates as required.

For higher energy coils, additional TVS protection may be required across FET drain-to-source.

**Figure 1**  
Coil Drive Circuit

## Application Notes on Coil Power Economizing using PWM Circuits (Continued)

This fast opening is useful for circuit interruption, and it allows the over travel mechanism of the contact actuator to work effectively in breaking minor contact welds that may occur when closing the contacts.

Allowing the free-wheeling diode to remain across the coil would significantly increase the contact opening time and opening speed, and possibly result in nuisance contact welds and/or reduced capability to interrupt circuit currents.

If additional diodes are required to protect the FET body diodes, select a Transient Voltage Suppressor (TVS) diode with a breakdown rating lower than that of the driver FET body diode. In general, a higher voltage TVS diode will result in faster contact opening and higher clamping voltage, while a lower voltage TVS diode will result in slower contact opening and lower clamping voltage. For more detailed information regarding TVS diode selection, contact TE and request the report titled [DC Relay Magnetic Energy Determination and Transient Voltage suppressor Diode Selection](#).

### 1.1 Recommended Operating Frequency and Duty Cycle

The frequency at which the PWM circuit is operated should be high enough such that the oscillation of the coil current does not lead to audible noise being generated by the magnetic components and coil winding. For most KILOVAC contactors, a coil drive frequency > 15 kHz is usually sufficient to ensure that nuisance audible noise is not generated. The PWM duty cycle required for economizing power while maintaining sufficient holding force can be calculated from the required holding current as follows:

$$\text{Duty Cycle(\%)} = (I_{\text{hold}} * R(T)_{\text{Coil}} / V_{\text{source}}) * 100 \quad (1)$$

Where:

R(T) = Coil Resistance at Temperature

I<sub>hold</sub> = Required Holding Current

V<sub>source</sub> = Source Voltage

Contact TE regarding the minimum required hold current needed for a particular Part Number. In general, divide the specified dropout voltage by the coil resistance at 20°C, and add 25% above that to get an estimate of the value to use in equation (1) for I<sub>hold</sub>.

### 2.0 Summary

This Application Note is meant to address some of the more common questions regarding the use of PWM circuits for coil power economization. In all cases, please refer to the applicable product data sheet for specific information.

TE can also recommend alternative solutions for mechanical dual-coil economizers, as well as “Electronic Cut-Throat” economizers. Product Application Engineers are available to answer questions regarding this subject by calling 800-253-4560 x2055, or 805-220-2055.

## 1600/1700 Series Delay On Operate Timers

### Product Facts

- AC/DC input delay on operate timer offered in fixed (1600) and adjustable (1700) types
- Up to 10A loads
- CMOS digital design
- Hermetic package
- Built to MIL-R-83726 environmental
- Many customizing options
  - Extended timing ranges
  - Tighter timing tolerances
  - Header and mounting

### Electrical Specifications

#### Timing Range —

**1600 series (fixed)** — 50 ms to 600 s  
**1700 series (adjustable)** — 50 ms to 240 s

**Tolerance** — ±10% or 10 ms, whichever is greater

**Recycle Time** — 10 ms (DC input), 50ms (AC input)

**Recovery Time** — 10 ms (DC input), 50ms (AC input)

**Input Voltage** — 18 to 31Vdc, 105 to 125Vac, 400 Hz

**Current Drain (at 25°C, 28Vdc)** —

**DC Coil, 10A contacts** —

**1- and 2-pole** — 135mA maximum

**AC or DC Coil, 4A contacts** —

**1-pole** — 100mA maximum

**2-pole** — 150mA maximum

**3- and 4-pole** — 200mA maximum

**Contact Ratings** —

**DC Coil, 10A contacts** —

10A resistive @ 30Vdc

1A inductive @ 30Vdc

2A resistive @ 115 Vrms, 400 Hz

1A inductive @ 115 Vrms, 400 Hz

### Environmental Specifications

**Temperature Range** —

-55°C to +85°C or -55°C to +125°C

**Vibration** — 20 G's, 10 - 2,000 Hz

**Shock** — 50 G's, 11 ± 1ms duration

**Insulation Resistance** — 1,000 megohms, min., at 500Vdc, all terminals to case

**Dielectric Strength** — 1,000Vrms, 60 Hz., at sea level, all terminals to case

**Sealing** — Hermetic, 1.3 in. (33.0mm) of mercury

**Life** — 100,000 operations, min.

**Weight** —

**4A units** — 4.5 oz (127.6g) max.

**10A units** — 8.5 oz (240g) max.

KILOVAC 1600/1700 series delay on operate timers combine solid state timing circuits with electromechanical output relays in robust hermetically sealed

enclosures. The 1600 types are fixed timers, while the 1700 models are adjustable via an external resistor. Numerous output options include 4A rated contacts in

1-4 form C (SPDT - 4PDT) arrangements and 10A rated contacts in 1-2 form C (SPDT-DPDT) arrangements.

### Specifications by Model Number – 4 Amp Contact Versions

Fixed Timer Model Number	Adjustable Timer Model Number	Input Voltage	Temperature Range	Housing Length (Dim. "A")	Contact Arrangement

1672	1772	AC	-55°C to +125°C	2.0 [50.8]	2 Form C (DPDT)
1673	1773	AC	-55°C to +125°C	2.375 [60.33]	3 Form C (3PDT)
1674	1774	AC	-55°C to +125°C	2.375 [60.33]	4 Form C (4PDT)

### Specifications by Model Number – 10 Amp Contact Versions

Fixed Timer Model Number	Adjustable Timer Model Number	Input Voltage	Temperature Range	Housing Length (Dim. "A")	Contact Arrangement
1610	1710	DC	-55°C to +85°C	2.419 [61.44]	1 Form C (SPDT)
1620	1720	DC	-55°C to +85°C	2.419 [61.44]	2 Form C (DPDT)

### Adjustable Timing Formula (1700 types)

The resistance required to obtain timing within this range is determined by using the formula:

$$R_x = 400K (T/T_{max}) - 40K$$

R<sub>x</sub> = External Resistance in Ohms,

T = Desired Time in Seconds, and

T<sub>max</sub> = Maximum Time (Code).

A high quality deposited carbon ±1%, 0.1W (min.) resistor is recommended for external resistance.

### Part Numbering System

<b>Typical Part Number</b>	1722	-C	-1102
<b>Model Number:</b>	Four digit code from table above.		
<b>Mounting (see outline dimension drawings):</b>	A = Studs on bottom B = Studs on top C = Studs on side		
<b>Timing Code:</b>	Four-digit code for any value between 50ms.		

A typical part number for an adjustable timer would be 1722-C-1102. This is a DC unit in the -55°C to +125°C temperature range with a 2 form C (DPDT) contact arrangement in a style "C" mounting, with a maximum time delay of 11s.

## 2400 Series Delay On Operate Timer, Fixed Timing, Relay Output

### Product Facts

- DC input fixed delay on operate timer
- 2 Form C (DPDT), 2A output
- CMOS digital design
- Reverse polarity protection
- Hermetic package
- Built to MIL-R-83726 environmentals
- Customizing options include
  - Tighter timing tolerances
  - Header and mounting
  - Different input voltages

### Electrical Specifications

- Timing Range** — 50 ms to 600 s
- Tolerance** — ±10% or 10 ms, whichever is greater
- Recycle Time** — 10 ms
- Recovery Time** — 20 ms
- Input Data** —
- Input Voltage** — 18 to 31Vdc
- Current Drain** — 85mA @ 31Vdc, 25°C
- Output Data** —
- Output Form** — 2 Form C (DPDT).
- Output Rating** — 2A resistive at 30Vdc; 125mA resistive at 115Vac, 400 Hz
- Transient Protection** — 80Vdc for 50ms

### Environmental Specifications

- Temperature Range** — -55°C to +85°C or -55°C to +125°C
- Vibration** — 20 G's, 10 - 2,000 Hz
- Shock** — 50 G's, 11 ± 1ms duration
- Insulation Resistance** — 1,000 megohms, min., at 500Vdc, all terminals to case
- Dielectric Strength** — 500Vrms, 60 Hz., at sea level, all terminals to case
- Sealing** — Hermetic, 1.3 in. (33.0mm) of mercury
- Life** — 100,000 operations, min.
- Weight** — 1.2 oz (30g) max.

Plug-in sockets are available for header option 2

KILOVAC 2400 series delay on operate timers combine solid state timing circuits with relay outputs in robust hermetically sealed enclosures. They are fixed timers. The 2 Form C (DPDT) output relay is rated 2A.

### Part Numbering System

<b>Typical Part Number</b>	2401	-1	A	-1102
<b>Model Number:</b>	2401 = Fixed timer, -55°C to +85°C 2402 = Fixed timer, -55°C to +125°C			
<b>Header Style (see Header Options drawings):</b>	1 = Hook terminals    2 = Straight terminals, short 3 = Straight terminals, long			
<b>Mounting (see outline dimension drawings):</b>	A = Plain case    B = Bracket B    D = Studs on side    E = Bracket E			

### Timing Code:

Four-digit code for any value between 50ms and 600s.

The timing code consists of four digits and gives the time in ms. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures; thus 50 ms would be coded 0500, 1.1 s would read 1101, and 1 m (60 s) would be 6002.

A typical part number would be 2401-1A-1102. This fixed timer operates at -55°C to +85°C, has hook terminals, style "A" mounting, and a time delay of 11s.

## 5600/5700 Series Delay On Release Timers

### Product Facts

- DC input delay on release timer offered in fixed (5600) and adjustable (5700) types
- Up to 10A loads
- Reverse polarity protection
- CMOS digital design
- Built to MIL-R-83726 environmental standards
- Many customizing options
  - Extended timing ranges
  - Tighter timing tolerances
  - Header and mounting
  - Different Aux. voltages
  - Different control line voltages
  - Input either 115Vac, 60 Hz

KILOVAC 5600/6700 series delay on release timers combine solid state timing circuits with electromechanical output relays in robust

hermetically sealed enclosures. The 5600 types are fixed timers, while the 5700 models are adjustable via an external resistor.

Numerous output options include 2A, 5A and 10A rated contacts in 1, and 2 form C (SPDT and DPDT) arrangements.

### Electrical Specifications

#### Timing Range —

**5600 series (fixed)** — 50 ms to 600 s

**5700 series (adjustable)** — 50 ms to 240 s

**Tolerance** — ±10% or ±15ms, whichever is less

**Recycle Time** — 10 ms

**Reset Time** — 20 ms

**Operate Time (Max.)** — 10 ms (2A and 5A models), 20ms (10A models)

**Input Voltage** — 18 to 31Vdc

**Control Voltage** — 10 to 31Vdc. Ground common to aux. power line.

10Vdc minimum must be applied for a minimum duration of 20ms to energize output and initiate the timing circuit.

**Current Drain (at 25°C, 28Vdc)** —

**Control Line** — 15mA typ., 25mA max.

**Input Line De-energized (after completion of delay period)** — 125 mA

**Input Line Energized** —

**1-pole, 2 & 5A models** — 100mA

**1-pole, 10A models** — 150mA

**2-pole, 2 & 5A models** — 150mA

**2-pole, 10A models** — 240mA

**Contact Ratings** —

**10A contacts** —

10A resistive @ 30Vdc

5A inductive @ 30Vdc

5A resistive @ 115 Vrms, 400 Hz

3A inductive @ 115 Vrms, 400 Hz

**5A contacts** —

5A resistive @ 30Vdc

1.5A inductive @ 30Vdc

3A resistive @ 115 Vrms, 400 Hz

1A inductive @ 115 Vrms, 400 Hz

**2A contacts** —

2A resistive @ 30Vdc

1A inductive @ 30Vdc

1A resistive @ 115 Vrms, 400 Hz

0.3A inductive @ 115 Vrms, 400 Hz

### Specifications by Model Number

Fixed Timer Model Number	Adjustable Timer Model Number	Input Voltage	Temperature Range	Contact Rating	Contact Arrangement	Available Enclosures
5601	5701	DC	-55°C to +85°C	2 Amp	1 Form C (SPDT)	A - C - D - E
5602	5702	DC	-55°C to +85°C	2 Amp	2 Form C (DPDT)	A - C - D - E
5605	5705	DC	-55°C to +85°C	5 Amp	1 Form C (SPDT)	D - E
5606	5706	DC	-55°C to +85°C	5 Amp	2 Form C (DPDT)	D - E
5610	5710	DC	-55°C to +85°C	10 Amp	1 Form C (SPDT)	D - E
5611	5711	DC	-55°C to +85°C	10 Amp	2 Form C (DPDT)	D - E

5622	5722	DC	-55°C to +125°C	2 Amp	2 Form C (DPDT)	A - C - D - E
5625	5725	DC	-55°C to +125°C	5 Amp	1 Form C (SPDT)	D - E
5626	5726	DC	-55°C to +125°C	5 Amp	2 Form C (DPDT)	D - E

See next page for complete ordering information and outline dimensions for the available enclosures.

### Environmental Specifications

#### Temperature Range —

-55°C to +85°C or -55°C to +125°C

**Vibration** — 20 G's, 10 - 2,000 Hz

**Shock** — 50 G's, 11 ± 1ms duration

**Insulation Resistance** — 1,000 megohms, min., at 500Vdc

**Dielectric Strength** — 1,000Vrms, 60 Hz., at sea level, all terminals to case

**Sealing** — Hermetic, 1.3 in. (33.0mm) of mercury

**Life** — 100,000 operations, min. (2A and 5A models); 50,000 operations, min. (10A models)

**Weight** — 8.5 oz (240g) max.

### Adjustable Timing Formula (4700 types)

The resistance required to obtain timing within this range is determined by using the formula:

$$R_x = 400K (T/T_{max}) - 40K, \text{ where}$$

$R_x$  = External Resistance in Ohms,  
 $T$  - Desired Time in Seconds, and  
 $T_{max}$  = Maximum Time (Code).

A high quality deposited carbon ±1%, 0.1W (min.) resistor is recommended for external resistance.

### Timing Diagram

Apply input power. Upon application of control power, the output will energize. Remove control power and initiate delay period.

### Special Notes

10Vdc minimum must be applied for a minimum duration of 20ms to energize output and initiate timing.

Units rated 10A have a minimum time delay of 100ms.

## 5600/5700 Series Delay On Release Timers (Continued)

### Part Numbering System

<b>Typical Part Number</b>	5722	-C	- 1102
<b>Model Number:</b> Four digit code from table on the previous page.			
<b>Mounting (see outline dimension drawings):</b> A = Studs on bottom of 2.5 in tall case D = Studs on bottom of 1.812 in. tall case	C = Studs on side of 2.5 in. tall case E = Bracket on side of 1.812 in. tall case		
<b>Timing Code:</b> Four-digit code for any value between 50ms.			
<b>Note:</b> Units with 10A contacts have a minimum time delay of 100ms.			

A typical part number for an adjustable timer would be 5722-C-1102. This DC unit is in the -55°C to +125°C temperature range with a 2 amp contacts in a 2 form C (DPDT) arrangement, enclosed in case with a style "C" mounting, with a maximum time delay of 11s.

## 1800/1900 Series Delay On Operate Digital Timing Modules

### Product Facts

- DC input delay on operate timer offered in fixed (1800) and adjustable (1900) types
- 300mA output
- CMOS digital design
- Reverse polarity protection
- Hermetic package
- Built to MIL-R-83726 environmentals
- Customizing options include
  - Tighter timing tolerances
  - Header and mounting

### Electrical Specifications

**Timing Range** —  
**1800 series (fixed)** — 50 ms to 600 s  
**1900 series (adjustable)** — 50 ms to 240 s

**Tolerance** — ±10% or 10 ms, whichever is greater

**Repeatability** — ±0.1%

**Recycle Time** — 10 ms

**Recovery Time** — 20 ms

**Input Data** —  
**Input Voltage** — 18 to 31Vdc  
**Current Drain (at 25°C, 28Vdc)** — 10mA, plus load current

**Output Data** —  
**Output Form** — 1 Form A (SPST-NO) solid state switch closure to ground  
**Output Rating** — 300mA @ 25°C, 100mA @ 125°C  
**Minimum Load** — 10mA

**Saturation Voltage** — 2.5Vdc, max.

**Leakage** — 1µA @ 25°C, 10µA @ 125°C

### Environmental Specifications

**Temperature Range** — -55°C to +85°C or -55°C to +125°C

**Vibration** — 20 G's, 10 - 2,000 Hz

**Shock** — 50 G's, 11 ± 1ms duration

**Insulation Resistance** — 1,000 megohms, min., at 500Vdc, all terminals to case

**Dielectric Strength** — 500Vrms, 60 Hz., at sea level, all terminals to case

**Sealing** — Hermetic, 1.3 in. (33.0mm) of mercury

**Life** — 100,000 operations, min.

**Weight** — 1 oz (28.3g) max

### Timing Diagram

KILOVAC 1800/1900 series delay on operate timer modules combine solid state timing circuits with solid state switch outputs in robust hermetically sealed enclosures. The 1800 types are fixed timers, while the 1900 models are adjustable via an external resistor. The 1 Form A (SPST-NO) switch is rated 300mA.

### Part Numbering System

<b>Typical Part Number</b>	1811	-1	A	-1002
<b>Model Number:</b>				
1811 = Fixed timer, -55°C to +85°C				
1821 = Fixed timer, -55°C to +125°C				
1911 = Adjustable timer, -55°C to +85°C				
1921 = Adjustable timer, -55°C to +125°C				
<b>Header Style (see Header Options drawings):</b>				
1 = Hook terminals	2 = Straight terminals			
<b>Mounting (see outline dimension drawings):</b>				
A = Plain case	B = Bracket B	C = Studs on side	E = Bracket E	

### Timing Code:

Four-digit code for any value between 50ms and 600s for fixed (1800) timers, and 50ms and 240s for adjustable (1900) timers.

The timing code consists of four digits and gives the time in ms. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures; thus 50 ms would be coded 0500, 1.1 s would read 1101, and 1 m (60 s) would be 6002.

Adjustable timers cover one decade, e.g., 62 ms to 620 ms. The upper decade limit is T<sub>max</sub> in the timing formula and is the value defined by the timing code in the part number.

A typical part number would be 1811-1A-1002. This fixed timing module operates at -55°C to +85°C, has hook terminals, style "A" mounting, and a time delay of 10s.

### Adjustable Timing Formula (1900 types)

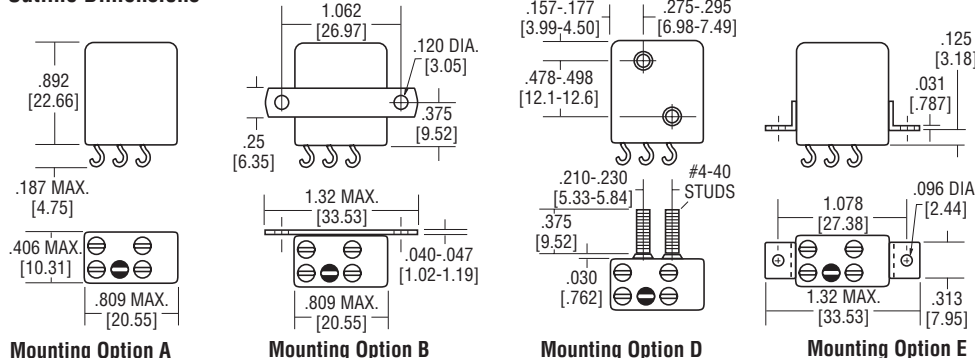

The resistance required to obtain timing within this range is determined by using the formula:

$$R_x = 400K (T/T_{max}) - 40K, \text{ where}$$

R<sub>x</sub> = External Resistance in Ohms,  
 T - Desired Time in Seconds, and  
 T<sub>max</sub> = Maximum Time (Code).

A high quality deposited carbon ±1%, 0.1W (min.) resistor is recommended for external resistance.

## 6001 Series Delay On Operate Digital Timing Module

### Product Facts

- Fixed delay on operate timer
- 300mA output
- CMOS digital design
- Voltage surge protection
- Qualified to MIL-R-83726/13

### Electrical Specifications

**Timing Range** — 50 ms to 600 s.

**Timing Accuracy** — ±10% of nominal timing under all conditions of input voltage and environmental extremes

#### Recycle Characteristics

**Before Time Out** — A power interruption occurring after the start but before completion of the timing cycle shall be for a duration of 0.5% of the nominal time delay or 10ms, whichever is greater, to ensure a loss in timing of no greater than 10%

**After Time Out** — A power interruption of 0.5% of the nominal time delay or 10ms, whichever is greater, will initiate a new timing cycle with a loss in timing of no greater than 5%

#### Input Data

**Input Voltage** — 28Vdc, nominal; range 18 to 31Vdc

**Current Drain (at 25°C, 28Vdc)** — 10mA (max.), plus load current

**Reverse Polarity Protection** — The timer will not be damaged or operate when input voltage polarity is reversed

#### Output Data

**Configuration** — 1 Form A (SPST-NO) solid state switch closure to ground

#### Load Ratings

**Resistive** — 300mA @ +25°C, derated to 100mA @ +125°C

**Inductive** — Three MIL-R-5757/9 relays (any relay with 26.5Vdc coil)

**Lamp Load** — Two MS25237-327 lamps per MIL-L-6363

**Load Suppression** — Suppression for inductive loads for output protection is provided within the unit

**Voltage Drop** — 2.5Vdc, max. @ -55°C and +25°C; 2.0 Vdc, max., @ +125°C

**Leakage Current** — 1µA, max. @ +25°C, 10µA, max. @ +125°C

**Insulation Resistance** — 1,000 megohms, min., @ 500Vdc, measured between all terminals tied together to the case

**Dielectric Strength** — 500Vrms, 60 Hz., at sea level, measured between all terminals tied together to the case

#### Transients

**Voltage Surge** — Per MIL-STD-704A, figure 9, limit 1, for category B equipment

**Self-generated Spikes** — ±10V

KILOVAC 6001 series delay on operate timer modules are miniature devices combining solid state timing circuits with solid state switch outputs in robust hermetically sealed DIP enclosures. The 1 Form A (SPST-NO) switch is rated 300mA.

### Timing Diagram

### Environmental Specifications

**Temperature Range** — -55°C to +125°C

Altitude — 80,000 ft.

Shock — 150 G's, 11 ± 1ms half-sine wave

Vibration (sinusoidal) — 10 - 80 Hz. at 0.06 inch DA; 80 - 3,000 Hz. at 20 G's

Sealing — MIL-STD-202, method 112, condition C

#### Materials:

- Cover — Nickel
- Header — Kovar® Alloy
- Pins — Kovar® Alloy, gold plated
- Marking — Per MIL-R-83726
- Weight — 0.42 oz (12g) max.

### Part Numbering System

<b>Typical Part Number</b>	6001	-6002	C
<b>Model Number:</b>	6001 = Fixed timer, -55°C to +125°C		
<b>Timing Code:</b>	Four-digit code for any value between 50ms and 600s.		
	The timing code consists of four digits and gives the time in ms. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures; thus 50 ms would be coded 0500, 1.1 s would read 1101, and 1 m (60 s) would be 6002.		
<b>Optional Suffix:</b>	C = Commercial version equivalent to M83726/13.		

A typical part number would be 6001-6002C. This solid state output timing module has a time delay of 60s at 28Vdc and is the commercial equivalent to M83726/13.

### Outline Dimensions

### Wiring Diagram

PIN 10 IS ACTIVE. DO NOT CONNECT.

### Special Notes:

- Load is connected between B+ and terminal designated. Delay begins upon application of power to terminals (B+ and B-).
- Always consult latest military specification for changes and additional information.

KOVAR is a trademark of Carpenter Technology Corporation.

## 2600 Series Flasher/Repeat-Cycle, Timer-Fixed, Solid State Output

### Product Facts

- All solid-state
- Digital timing
- Reverse polarity protection
- Transient/surge protection

### Electrical Specifications

#### Timing Range —

"On Time" (.05 to 600 SEC)

"Off Time" (.05 to 600 SEC)

**Duty Cycle** — D.C. =  $\frac{T_{on}}{T_{on} + T_{off}}$

**Frequency** —  $f = \frac{1}{T_{on} + T_{off}}$   
(Flash rate)

**Tolerance** — ±10%

**Repeatability** — ±0.1%

#### Input Data —

**Input Voltage** — 18 to 31 V dc

**Current Drain** — 30 ma @ 28 V dc

#### Output Data —

**Output** — 28 V dc

V<sub>in</sub> (dc) — 1.5 V dc @ 100 ma

**Load** — 30 ma max.

### Environmental Specifications

#### Operate Temperature —

-55°C to +125°C

**Vibration** — 20 G's, 10 - 2,000 Hz

**Shock** — 50 G's, 11 ± 1 milliseconds duration

**Insulation Resistance** — 1,000 megohms at 500 Vdc

**Dielectric Strength** — 1,000 Vms,

60 Hz, at sea level. All terminals tied together to case.

**Sealing** — Hermetic, 1.3 in. (33.0mm) mercury

**Life** — over 1,000,000 operations

**Weight** — 8 oz. (200g) max.

### Applications

The Hi-G Series 2600 Flasher can be used wherever warning or indicating lights, navigation or position lights, panel or control lights must be operated with a maximum of reliability in severe environments. The Series 2600 can also be used to interrupt Tone Generations or other Signaling Devices at a predetermined frequency.

- Higher output rating
- Output sink to ground
- Control line
- AC Operation
- Adj. "on" and "off" time
- Relay output to 10 amps
- Alternate packaging
- Initial cycle "on"
- Extended timing ranges

### How to Order

Series	Initial Timing Cycle
2601	Off
2602	On

The part number consists of four elements. The series number, a letter signifying mounting style and the timing code numbers. The first timing is the "ON" time and the second is "OFF" time. The timing code number consists of four digits and gives the time in milliseconds. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures, thus, 50 milliseconds would be coded 0500. 1.1 seconds would read 1101, and 1 minute (60 seconds) would be 6002.

### Example: HI-G Part Number

## 4600/4700 Series Interval Timers

### Product Facts

- AC/DC input interval timer offered in fixed (4600) and adjustable (4700) types
- Up to 10A loads
- Reverse polarity protection
- Hermetic package
- Built to MIL-R-83726 environmental standards
- Many customizing options
  - Extended timing ranges
  - Tighter timing tolerances
  - Header and mounting
  - 115Vac, 60 Hz. input types

### Electrical Specifications

**Timing Range** —  
**4600 series (fixed)** — 100 ms to 600 s  
**4700 series (adjustable)** — 100 ms to 240 s

**Tolerance** — ±10%

**Recycle Time** — 10 ms (DC input), 50ms (AC input)

**Operate Time (Max.)** — 10 ms (4A models), 20ms (10A models)

**Input Voltage** — 18 to 31Vdc, 105 to 125Vac, 400 Hz

**Current Drain (at 25°C, 28Vdc)** —  
**DC Coil, 10A contacts** —  
**1- and 2-pole** — 135mA maximum

**AC or DC Coil, 4A contacts** —

**1-pole** — 100mA maximum

**2-pole** — 150mA maximum

**3- and 4-pole** — 200mA maximum

**Contact Ratings** —

**DC Coil, 10A contacts** —

10A resistive @ 30Vdc

5A inductive @ 30Vdc

5A resistive @ 115 Vrms, 400 Hz

3A inductive @ 115 Vrms, 400 Hz

**AC or DC Coil, 4A contacts** —

4A resistive @ 30Vdc

1A inductive @ 30Vdc

2A resistive @ 115 Vrms, 400 Hz

1A inductive @ 115 Vrms, 400 Hz

### Environmental Specifications

**Temperature Range** —

-55°C to +125°C

**Vibration** — 20 G's, 10 - 2,000 Hz

**Shock** — 50 G's, 11 ± 1ms duration

**Insulation Resistance** — 1,000 megohms, min., at 500Vdc

**Dielectric Strength** — 1,000Vrms, 60 Hz., at sea level, all terminals to case

**Sealing** — Hermetic, 1.3 in. (33.0mm) of mercury

**Life** — 100,000 operations, min. (4A models); 50,000 operations, min. (10A models);

**Weight** —

**4A units** — 4.5 oz (127.6g) max.

**10A units** — 8.5 oz (240g) max.

KILOVAC 4600/4700 series interval timers combine solid state timing circuits with electromechanical output relays in robust hermetically sealed enclosures. The

4600 types are fixed timers, while the 4700 models are adjustable via an external resistor. Numerous output options include 4A rated contacts in 1, 2 and 4 form

C (SPDT, DPDT and 4PDT) arrangements and 10A rated contacts in 1-2 form C (SPDT-DPDT) arrangements.

### Specifications by Model Number – 4 Amp Contact Versions

Fixed Timer Model Number	Adjustable Timer Model Number	Input Voltage	Temperature Range	Contact Rating	Contact Arrangement
4610	4710	DC	-55°C to +125°C	10 Amp	1 Form C (SPDT)
4611	4711	DC	-55°C to +125°C	10 Amp	2 Form C (DPDT)
4621	4721	DC	-55°C to +125°C	4 Amp	1 Form C (1PDT)
4622	4722	DC	-55°C to +125°C	4 Amp	2 Form C (DPDT)
4624	4724	DC	-55°C to +125°C	4 Amp	4 Form C (4PDT)

4672	4772	AC	-55°C to +125°C	4 Amp	2 Form C (DPDT)
4674	4774	AC	-55°C to +125°C	4 Amp	4 Form C (4PDT)

### Timing Diagram

Apply power and the output will energize. After time-out, the output will revert to de-energized state. Remove and reapply input to cycle.

### Adjustable Timing Formula (4700 types)

The resistance required to obtain timing within this range is determined by using the formula:

$R_x = 400K (T/T_{max}) - 40K$ , where

$R_x$  = External Resistance in Ohms,

$T$  - Desired Time in Seconds, and

$T_{max}$  = Maximum Time (Code).

A high quality deposited carbon ±1%, 0.1W (min.) resistor is recommended for external resistance.

### Part Numbering System

**Typical Part Number** 4722 -C -1102

**Model Number:**

Four digit code from table above.

**Mounting (see outline dimension drawings):**

A = Studs on bottom B = Studs on top C = Studs on side

**Timing Code:**

Four-digit code for any value between 100ms and 600s for fixed (4600) timers, and 100ms and 240s for adjustable (4700) timers.

The timing code consists of four digits and gives the time in ms. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures; thus 50 ms would be coded 0500, 1.1 s would read 1101, and 1 m (60 s) would be 6002.

Adjustable timers cover one decade, e.g., 62 ms to 620 ms. The upper decade limit is  $T_{max}$  in the timing formula and is the value defined by the timing code in the part number.

A typical part number for an adjustable timer would be 4722-C-1102. This is a DC unit in the -55°C to +125°C temperature range with a 2 form C (DPDT) contact arrangement in a style "C" mounting, with a maximum time delay of 11s.

## 4800 Series Interval Timer, Fixed Timing, Solid State Output

### Product Facts

- DC input fixed delay interval timer
- 1 Form A (SPST-NO), 500mA output
- CMOS digital design
- Reverse polarity protection
- Hermetic package
- Built to MIL-R-83726 environmentals
- Customizing options include
  - Adjustable timing
  - Tighter timing tolerances
  - Header and mounting
  - Relay output
  - AC input

### Electrical Specifications

**Timing Range:** 100 s. to 600 s.  
**Tolerance:** ±10%.  
**Repeatability:** ±2%.  
**Recycle Time:** 0.5% of Max. Delay.  
**Input Data:**  
**Input Voltage:** 18 to 31Vdc.  
**Current Drain:** 40mA. max.  
**Output Data:**  
**Output Form:** 1 Form A (SPST-NO).  
**Output Rating:**  
 500mA @ +25°C;  
 200mA @ +125°C.  
**Saturation Voltage:**  
 1.0V, 500mA (25°C).

**Leakage:**  
 10µA (125°C).

### Environmental Specifications

**Temperature Range:**  
 -55°C to +85°C or -55°C to +125°C.  
**Vibration:** 20 G's, 10 - 2,000 Hz.  
**Shock:** 50 G's, 11 ± 1ms duration.  
**Insulation Resistance:** 1,000 megohms, min., at 500Vdc.  
**Dielectric Strength:** 500Vrms, 60 Hz., at sea level, all terminals to case.  
**Sealing:** Hermetic, 1.3 in. (33.0mm) of mercury.  
**Life:** Over 1 million operations.  
**Weight:** 2 oz (50g) max.

Plug-in sockets are available

KILOVAC 4800 series interval timers combine solid state timing circuits with solid state outputs in robust hermetically sealed enclosures. They are fixed timers. The 1 Form A (SPST-NO) output switch is rated 500mA.

### Timing Diagram

Apply power and the output will energize. After time-out, the output will revert to de-energized state. Remove and reapply power to recycle.

### Part Numbering System

<b>Typical Part Number</b>	4801	-1	A	-1102
<b>Model Number:</b>	4801 = Fixed timer, -55°C to +85°C 4851 = Fixed timer, -55°C to +125°C			
<b>Header Style (see Header Options drawings):</b>	1 = Hook terminals      2 = Straight terminals, short 3 = Straight terminals, long			
<b>Mounting (see outline dimension drawings):</b>	A = Plain case    B = Bracket    C = Studs on side    E = Bracket E			
<b>Timing Code:</b>	Four-digit code for any value between 50ms and 600s.			

The timing code consists of four digits and gives the time in ms. The first three digits are the significant figures and the last digit is the number of zeros following the significant figures; thus 50 ms would be coded 0500, 1.1 s would read 1101, and 1 m (60 s) would be 6002.

A typical part number would be 4801-1A-1102. This fixed timer operates at -55°C to +85°C, has hook terminals, style "A" mounting, and a time delay of 11s.

## 1310 Series DC Voltage Level Sensor, Relay Output

### Product Facts

- Standard models combine DC voltage-sensing circuit with 2A DPDT output relay
- Various applications
  - Battery protection
  - Computer protection
  - Low or high voltage alarms
- Many customizing options
  - Solid state output
  - Two-stage sensing (voltage band)
  - Up to 10A relay output
  - Controlled dropout differential
  - Operate with auxiliary control voltage
  - Time delay on trip point
  - Tighter accuracy
  - Different package, mounting, header

The KILOVAC 1310 series DC voltage sensor is essentially a voltage monitoring device operating a snap-action transistor circuit with low drift and inherent temperature compensation. This device will either open

or close a circuit when a predetermined voltage is present at the input. By using a KILOVAC electro-mechanical relay as the output of the voltage sensor, a positive switching action can be achieved with very close

differential between pull-in and drop-out voltages. The unit is potted and hermetically sealed and is designed to meet the environmental requirements of MIL-R-83726.

### Electrical Specifications

- Pull-In Voltage** — Any voltage level between 10 to 150Vdc
- Drop-Out Voltage** — 0 to 0.5V below pull-in voltage
- Current Drain** — 15mA max @ 25°C
- Accuracy** — ±2.5% of set point over temperature range
- Max. Allowable Applied Voltage** — 150% of specified pull-in voltage
- Auxiliary Voltage** — None required
- Operate and Release Times** — 50ms max. over the temperature range
- Contact Arrangement** — 2 Form C (DPDT)
- Contact Rating** — 2 amps resistive @ 30Vdc  
300mA resistive @ 115 Vrms, 400 Hz

### Outline Dimensions

### Environmental Specifications

- Temperature Range** — -55°C to +125°C
- Vibration** — 20 G's, 10 - 2,000 Hz
- Shock** — 50 G's, 11 ± 1ms duration
- Insulation Resistance** — 1,000 megohms, min., at 500Vdc, all terminals to case
- Dielectric Strength** — 1,000Vrms, 60 Hz., at sea level, all terminals to case
- Sealing** — Hermetic, 1.3 in. (33.0mm) of mercury
- Life** — 100,000 operations, min.
- Weight** — 3.5 oz (99.2g) max.

**Dielectric Strength** — 1,000Vrms, 60 Hz., at sea level, all terminals to case

**Sealing** — Hermetic, 1.3 in. (33.0mm) of mercury

**Life** — 100,000 operations, min.

**Weight:** 3.5 oz (99.2g) max.

The KILOVAC 1350 series AC voltage sensor energizes a relay when the monitored power line voltage reaches a predetermined level. This rugged unit with reliable solid-state design provides precise, repeatable operation over a wide

temperature range. The input voltage is fed into a temperature compensated comparator circuit. When the input reaches the preset level, transistor amplifiers switch the output relay. This output may control any external devices, process or

warning system to protect expensive equipment. The unit is potted and hermetically sealed and is designed to meet the environmental requirements of MIL-R-83726.

## 1400 Series Phase Sensor 115 or 208Vac, 60 or 400 Hz., Relay Output

### Product Facts

- Phase sensor for 115 or 208Vac, 60 or 400 Hz
- Up to 2A loads
- Static and motor load types
- Hermetic package
- Built to MIL-R-83726 environmental standards
- Various applications
  - Motor protection
  - Brown-out protection
  - Power supply sequencing
  - Air conditioner protection
  - Ground support equipment protection
- Many customizing options
  - 50 Hz. input types
  - Contact ratings to 10A
  - Higher voltages
  - Different packages, headers and mounting

KILOVAC 1400 series phase sensors combine solid state sensing circuits with electromechanical output relays in robust hermetically sealed enclosures.

P-Type models are for static loads. With the line voltage and frequency limits, P-Type units will energize only when input phases are in sequence A-B-C. They will de-energize only when

power is removed. The P-Type unit is best suited to applications where static loads are used and where regenerated voltage will not be present if a phase opens.

Q-Type units perform the same function as the P-Type since they will energize only when input phases are in sequence A-B-C. In addition, the Q-Type unit will de-energize when any phase is disconnected or

grounded, provided the voltage input to the unit is below 50% of the nominal phase-to-phase voltage input. Q-Type units are suitable for motor loads where regenerated voltage is produced.

Neither P-Type nor Q-Type units require connection to the neutral leg.

For high-current applications, phase sensors are used with slave relays having heavy duty contact ratings.

### Electrical Specifications

#### Input Data —

Voltage — 115 or 208Vac  
Frequency — 60 or 400 Hz

Operate Time (Max.) — 75 ms

Release Time (Max.) — 100 ms

Contact Arrangement — 1 Form C (SPDT)

#### Contact Ratings —

2A resistive @ 30Vdc  
0.5A inductive @ 30Vdc  
0.25A resistive or inductive @ 115 Vrms, 60 or 400 Hz

### Environmental Specifications

Temperature Range —  
-55°C to +85°C

Vibration — 20 G's, 10 - 2,000 Hz

Shock — 50 G's, 11 ± 1ms duration

Insulation Resistance — 1,000 megohms, min., at 500Vdc

Dielectric Strength — 1,000Vrms, 60 Hz., at sea level, all terminals to case

Sealing — Hermetic, 1.3 in. (33.0mm) of mercury

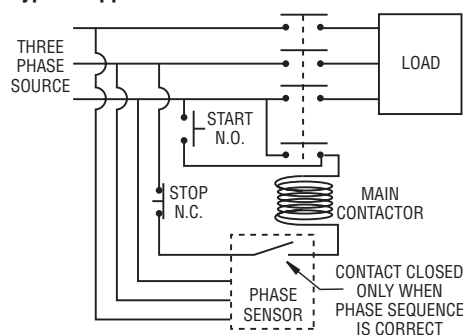

Life — 100,000 operations, min.

Weight — 12 oz (340g) max.

### Specifications by Model Number

Fixed Timer Model Number	Load Type	Line to Line Voltage ±10%	Frequency ±10%	Max. Power Required	Mounting Style Figure
1407	P	115V	60 Hz.	4 Watts	3
1408	P	115V	400 Hz.	4 Watts	1 or 3
1409	P	208V	60 Hz.	6 Watts	3
1410	P	208V	400 Hz.	6 Watts	3
1437	Q	115V	60 Hz.	6 Watts	2
1438	Q	115V	400 Hz.	6 Watts	3

## 7000 Series Frequency Sensor

### Product Facts

- 320 to 480 Hz. frequency sensor
- 1 or 2 Form C (SPDT or DPDT) contacts
- Hermetic package
- Many customizing options
  - 50 or 60 Hz. Sensing
  - Dual trip points
  - Tighter accuracy
  - Enclosures
  - Higher temperature range
  - Up to 4 Form C (4PDT)
  - 10A contacts

### Electrical Specifications

**Input Voltage** — 95 to 135Vac, 400 Hz

**Frequency Range** — 320 to 480 Hz

**Accuracy** — ± 2%

**Contact Arrangement** —  
1 Form C (SPDT) or 2 Form C (DPDT)

**Contact Ratings** —  
4A resistive @ 30Vdc  
2A resistive @ 115 Vrms, 400 Hz

**Current Drain** — 150mA maximum

**Hysteresis** — 0.5% from trip point

### Environmental Specifications

**Temperature Range** —  
-55°C to +85°C

**Vibration** — 20 G's, 10 - 2,000 Hz

**Shock** — 50 G's, 11 ± 1ms duration

**Insulation Resistance** — 1,000 megohms, min., at 500Vdc, all terminals to case

**Dielectric Strength** — 1,000Vrms, 60 Hz., at sea level, all terminals to case

**Sealing** — Hermetic, 1.3 in. (33.0mm) of mercury

**Life** — 100,000 operations, min.

**Weight** — 8.5 oz (240g) max.

KILOVAC 7000 series frequency sensor utilizes an integrated circuit digital logic design to determine, cycle by cycle, whether a given input signal is within a predetermined frequency pass band. Typical application is in monitoring MIL-STD-704 power systems.

### Part Numbering System

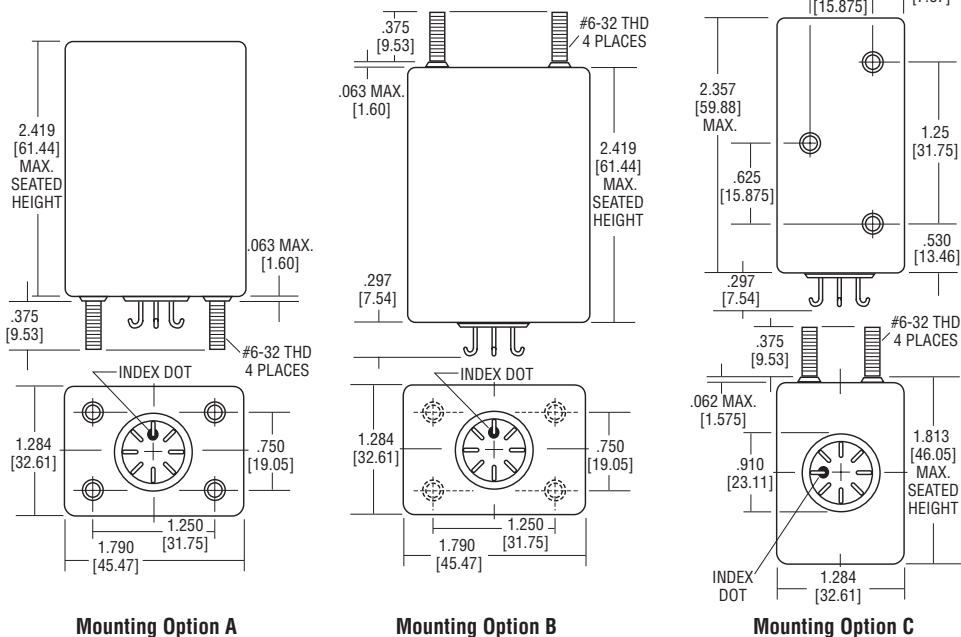

<b>Typical Part Number</b>	<b>7000</b>	<b>-2</b>	<b>B</b>	<b>-380</b>
Model Number: 7000 - Frequency Sensor.				
Contact Arrangement: 1 = 1 Form C (SPDT)      2 = 2 Form C (DPDT)				
Mounting (see outline dimension drawings): A = Studs on bottom    B = Studs on top    C = Studs on side				
Frequency Trip Point: Three-digit code for any value between 320 Hz. and 480 Hz.				

A typical part number would be 7000-2B-380. This would be a sensor with a 2 form C (DPDT) contact arrangement in a style "C" mounting, with a 380 Hz. trip point for -55°C to +85°C temperature range .

**DS11 Series SSR For DC Loads up to 2A @ 60Vdc**

**Product Facts**

- Standard options: short circuit/overload protection, switch status and trip status
- Optically coupled all solid state relay
- TTL & CMOS compatible input
- Low on-resistance power MOSFET output
- Tested per MIL-PRF-28750D and approved to DSCC drawing 88062 with "Y" level screening

DS11 series SSRs feature state of the art photo-voltaic optical isolation and power MOSFET output chips for ultra-reliable high speed switching of DC loads up to 2 amps, with extremely low on-resistance. Standard options include integral current overload/short circuit protection to provide protection of the relay, load

and wiring; and isolated switch status or trip status. The overload feature provides protection if a short or overload develops while the relay is in the on state or if the relay is turned on into a dead short. Switch status, optically isolated from the load, signals the status of the output and provides a logic "0" when the output

is off and a logic "1" when the output is on. Trip status, also optically isolated from the load, provides a logic "1" if the output trips off and a logic "0" when the output is in a normal condition, on or off, and is available only in conjunction with short circuit protection.

KILOVAC Part No.	DSCC Dwg. No.	Relay Version

Header — KOVAR

Cover — Nickel

Pins — KOVAR, gold plated

### Electrical Specifications (-55°C to +105°C unless otherwise specified)

#### Input (2 terminal configuration)

Input supply voltage range (Vcc)	3.8 - 32 Vdc (Notes 1 & 2, Figures 1 & 2)
Input current (max.) @ 5Vdc	15mAdc (Notes 1 & 2, Figures 1 & 2)
Must turn-on voltage	3.8Vdc
Must turn-off voltage	1.5Vdc
Reverse voltage protection	-32Vdc

#### Input (3 terminal configuration)

Control voltage range	0 - 18 Vd
Control current (max.)	250µAdc @ 5V, 1mA @ 18V
Input supply voltage range (Vcc)	3.8 - 32 Vdc (Notes 1 & 2, Figures 1 & 2)
Input current (max.) @ 5Vdc	15mADC (Notes 1 & 2, Figures 1 & 2)
Must turn-on voltage	0.3Vdc
Must turn-off voltage	3.2Vdc

#### I/O

Dielectric strength (min.)	1,000V rms
Insulation resistance (min.) @ 500Vdc	10 <sup>9</sup> ohms
Capacitance (max.)	10pF

#### Output

Continuous load current (max.) @ 25°C	2.1Adc (Figure 7)
Continuous load voltage (max.)	60Vdc
Transient blocking voltage (max.)	80Vdc (Note 5)
On resistance (max.) @ T <sub>j</sub> = 25°C, I <sub>L</sub> = 100mA	0.15 ohm (Note 6, Figure 6)
Output voltage drop (max.)	0.5Vdc
Leakage current (max.) @ V = 60Vdc	100µAdc
Leakage current (max.) @ V = 60Vdc, with switch status	2mAdc
Turn-on time (max.)	3 ms (Figure 3)
Turn-off time (max.)	1 ms (Figure 3)
dv/dt (min.)	100V / µs
Electrical system spike	600Vdc (Note 5)
Output chip junction temperature (max.)	125°C
Thermal resistance (max.), junction to ambient	90°C/W
Thermal resistance (max.), junction to case	25°C/W

#### Status

Status supply voltage range	1 - 18Vdc
Status current (max.) @ V <sub>status</sub> ≤ 0.4Vdc	600µADC (Figure 5, Note 8)
Status leakage current (max.) @ 16Vdc	10µAdc
Status turn-on time (max.)	3.5 ms (Figure 4)
Status turn-off time (max.)	8 ms (Figure 4)

#### Short Circuit Protection

Current surge without tripping (max.), 100ms pulse	4.25Adc
Overload trip current (max.), 0.5 ms pulse, V = 60Vdc	10Adc
Trip time (typical), turning on into short	400µs
Trip time (typical), shorting while relay is on	280µs

Figure 9 - Outline Dimensions

TOLERANCE:  
 ± 0.010 (0.25mm) FOR 2 PLACE DECIMALS,  
 ± 0.005 (0.13mm) FOR 3 PLACE DECIMALS.  
 UNLESS OTHERWISE SPECIFIED

Notes

1. 2 terminal input configuration is compatible with CMOS or open collector TTL (with pull-up resistor). For Vcc levels above 6Vdc, a series limiting resistor is required. See Fig. 2 for resistor value. Use standard resistor value equal to or less than value from the curve.
2. Input transitions to be ≤ 1ms duration, and input direct drive should be "bounceless contact" type.
3. Vcc = 5Vdc for all tests unless otherwise specified.
4. All DS11 Series relays may drive loads connected to either positive or negative referenced power supply lines. Reversing polarity of output may cause permanent damage. Inductive loads must be diode suppressed.
5. Transient blocking voltage and electrical system spike tests are performed per MIL-STD-704 (28VDC systems).
6. To determine the maximum on-resistance at any given junction temperature, multiply on-resistance at 25°C (0.15 ohm) by normalized on-resistance factor from curve (Fig. 6).
7. Overload testing per MIL-R-28750 is constrained to the limits imposed by the short circuit protection requirements of this specification and DSCC drawing 88062. Load circuit series inductance for "load shorted" mode of operation to be limited to 50mH max. Maximum repetition rate into a shorted load should not exceed 10 Hz.
8. Proper operation of the status feedback requires a status pull-up resistor. See Fig. 5 for status resistor value.

## DS13 SSR for loads up to 2A @ 60Vdc

### Product Facts

- Standard options: short circuit/overload protection and control status.
- Optically coupled all solid state relay.
- TTL & CMOS compatible input.
- Low on-resistance power MOSFET output.
- Tested per MIL-PRF-28750D and approved to DSCC drawing 90091.
- All versions available with Tyco Electronics "W" level screening for KILOVAC relays.

DS13 series SSRs employ state of the art photovoltaic optical isolation and power MOSFET output chips for ultra-reliable high speed switching of DC loads up to 2 amps, with low on-resistance. Standard options include integral current overload/short

circuit protection and a separate input control status line. The overload feature provides protection of the relay, load and load circuit wiring in the event of a sustained current overload or short circuit while the relay is on or when it is turned on into a short. The

control status provides a built-in test function which provides a logic "0" when the input circuit is energized and functional. The relay is packaged into a custom hermetically sealed low-profile 8-pin ceramic DIP package, with through hole or surface mount pins.

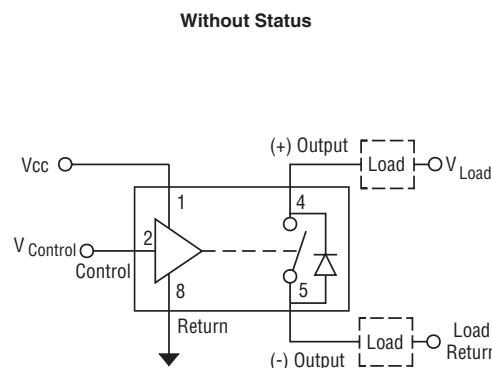

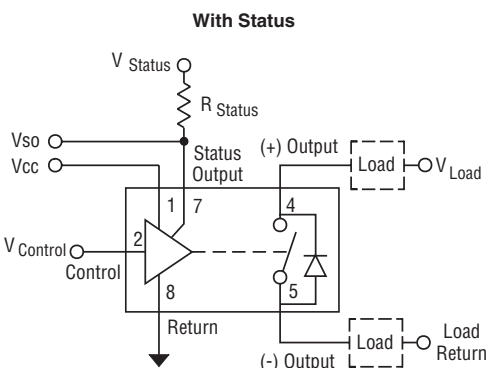

KILOVAC Part No.	DSCC Dwg. No.	Relay Version
DS13-1Y	90091-008	Basic relay
DS13-1000	90091-004	Relay w/ short circuit protection
DS13-1001	90091-006	Relay w/ control status
DS13-1002	90091-002	Relay w/ short circuit protection and control status

Notes: Add suffix "S" to part number for surface mount versions.  
 Add suffix "T" to part number for tinned leads.  
 Add suffix "W" to part number for lower screening level.

### Environmental Characteristics

#### Ambient Temperature Range:

Operating: -55°C to +105°C.  
Storage: -55°C to +125°C.

#### Vibration Resistance:

100 G's, 10-3,000 Hz.

#### Shock Resistance:

1,500 G's, 0.5 ms pulse.

#### Constant Acceleration Resistance:

5,000 G's.

### Mechanical Characteristics

#### Weight (max.):

.07 oz. (2 grams)

#### Materials:

Case: DIP, hermetically sealed, ceramic

Pins: Copper, gold plated

### Electrical Specifications (-55°C to +105°C unless otherwise specified)

#### Input (2 terminal configuration)

Input supply voltage range (Vcc)	3.8 - 32 Vdc (Notes 1 & 2, Figures 1 & 2)
Input current (max.) @ 5Vdc	15mA <sub>dc</sub> (Notes 1 & 2, Figures 1 & 2)
Must turn-on voltage	3.8Vdc
Must turn-off voltage	1.5Vdc
Reverse voltage protection	-32Vdc

#### Input (3 terminal configuration)

Control voltage range	0 - 18 Vdc
Control current (max.)	240 $\mu$ A <sub>dc</sub> @ 5V, 1mA @ 18V
Input supply voltage range (Vcc)	3.8 - 32 Vdc (Notes 1 & 2, Figures 1 & 2)
Input current (max.) @ 5Vdc	15mA <sub>dc</sub> (Notes 1 & 2, Figures 1 & 2)
Must turn-on voltage	0.3Vdc
Must turn-off voltage	3.2Vdc

#### I/O

Dielectric Strength (min.)	1,000V rms
Insulation Resistance (min.) @ 500Vdc	10 <sup>9</sup> ohms
Capacitance (max.)	10pF

#### Output

Continuous load current (max.) @ 25°C, without short circuit protection	2.0A <sub>dc</sub> (Figure 5, Note 3)
Continuous load current (max.) @ 25°C, with short circuit protection	1.0A <sub>dc</sub> (Figure 5, Note 3)
Continuous load voltage (max.)	60Vdc
Transient blocking voltage (max.)	80Vdc (Note 4)
On resistance (max.) @ T <sub>j</sub> = 25°C, I <sub>L</sub> = 100ma, with short circuit protection	0.45 ohm (Note 5, Figure 4)
On resistance (max.) @ T <sub>j</sub> = 25°C, I <sub>L</sub> = 100ma, without short circuit protection	0.22 ohm (Note 5, Figure 4)
Output voltage drop (max.), with short circuit protection	0.6Vdc
Output voltage drop (max.), without short circuit protection	0.75Vdc
Off-state leakage current (max.) @ 60Vdc	100 $\mu$ A <sub>dc</sub>
Turn-on time (max.)	1.5 ms (Figure 3)
Turn-off time (max.)	.25 ms (Figure 3)
dv/dt (min.)	100V / $\mu$ s
Electrical system spike	$\pm$ 600Vdc (Note 4)
Junction temperature (max.)	150°C
Thermal resistance (max.), junction to ambient	80°C/W
Thermal resistance (max.), junction to case	20°C/W

#### Status

Status supply voltage	30Vdc
Status sink current (max.) @ V <sub>status</sub> $\leq$ 0.3Vdc	2mA <sub>dc</sub> (Note 7)
Status leakage current (max.) @ 15Vdc	4 $\mu$ A <sub>dc</sub>

#### Short Circuit Protection

Figure 7 - Outline Dimensions

10  
KILOVAC Solid State Relays

Notes

1. 2 terminal input configuration is compatible with CMOS or open collector TTL (with pull-up resistor). For Vcc levels above 6Vdc, a series limiting resistor is required. See Fig. 2 for resistor value. Use standard resistor value equal to or less than value from the curve.
2. Vcc = 5Vdc for all tests unless otherwise specified.
3. All DS13 Series relays may drive loads connected to either positive or negative referenced power supply lines. Reversing polarity of output may cause permanent damage. Inductive loads must be diode suppressed.
4. Transient blocking voltage & electrical system spike tests are performed per MIL-STD-704 (28Vdc systems).
5. To determine the maximum on-resistance at any given junction temperature, multiply on-resistance at 25°C by normalized on-resistance factor from curve (Fig. 4).
6. Overload testing per MIL-R-28750 is constrained to the limits imposed by the short circuit protection requirements of this specification and DSCC drawing 90091. Load circuit series inductance for "load shorted" mode of operation to be limited to 50mH max. Maximum repetition rate into a shorted load should not exceed 10 Hz. To calculate maximum on-resistance at any temperature, use the following equation:  $R(on) = R(on) @ 25^\circ C \times NF$  (without short circuit protection) and  $R(on) = 0.2 \times NF + .21$  (with short circuit protection) where NF = normalized on-resistance factor from Fig. 4.
7. Proper operation of the status feedback requires a status pull-up resistor. Select the status resistor such that it limits status output current to 2mA:  $R_{status} = \frac{V_{status}}{I_{status}} - 0.3V / 2mA$ .

## MS14 Series Solid State Relay, With DC or Bi-Directional Output to 350mA @ 400V

### Product Facts

- 1000V optical isolation protects control and driver circuitry from load transients.
- Buffered/current limited input for direct drive from CMOS or TTL logic.
- Power MOSFET output chips for low voltage drop.
- 90 & 240mA output current.
- 85, 100 & 400V output voltage.
- Subminiature hermetically sealed .100 grid package.
- Screened per "Y" level of MIL-PRF-28750D.
- Direct replacement for TELEDYNE M92F & M93F series

### Environmental Characteristics

#### Ambient Temperature Range:

Operating: -55°C to +105°C.  
Storage: -55°C to +125°C.

#### Vibration Resistance:

30 G's, 10-3,000 Hz.

#### Shock Resistance:

1,500 G's, 0.5 ms pulse.

#### Constant Acceleration Resistance:

5,000 G's.

### Mechanical Characteristics

MS14 series subminiature SSRs employ state of the art photo-voltaic optical isolation providing 1000Vrms input/output isolation and power mosfet output chips for ultra-reliable

high speed switching of DC or bidirectional loads up to 350mA and 400Vdc. The input is current regulated and buffered to minimize power dissipation and permit driving the relay direct

from CMOS or TTL. The relay is packaged in a custom hermetically sealed low-profile .100 grid package which conserves space for high density PC board circuitry.

**Figure 7 - Outline Dimensions**

Unless otherwise specified, tolerances are:  
±0.010 [0.25] for 2 place decimals  
±0.005 [0.13] for 3 place decimals

Terminal numbers are for reference only and do not appear on the header.

**Notes**

1. 2 terminal input configuration is compatible with CMOS or open collector TTL (with pull-up resistor).
2. For Vcc levels above 6Vdc, a series limiting resistor is required. See Fig. 2 for resistor value. Use standard resistor value equal to or less than value from the curve.
3. Vcc = 5Vdc for all tests unless otherwise specified.
4. All MS14 Series relays may drive loads connected to either positive or negative referenced power supply lines. Inductive loads must be diode suppressed.
5. If an input series current limiting resistor is used, derating of output current vs. Vcc is not necessary. Curve for 4V applies.
6. On-resistance at any ambient temperature other than 25°C can be computed as follows:  
 $R (@ \text{any } T) = R (@ +25^\circ\text{C}) \times e^{e^{(T-25)}}$ , where T = new temperature - 25°C, e = 2.7182818.

### Product Facts

- Hermetically sealed TO-5 package
- Transformer coupled
- High speed switching
- JTS5-1Y switches AC or DC
- Qualified to M28750/5, 6, & 7

- Notes:** 1) Reversing polarity of input (or output except for JTS5-1) may cause permanent damage.  
 2) Input must be a step function. Rise or fall time, as applicable, not to exceed 100 µsec.  
 3) Inductive loads must be diode suppressed.  
 4) For any control voltage, the maximum load current shown on graphs must not be exceeded. Attempting to draw currents in excess of those specified on graphs can cause permanent damage.

## MS18-1006 High Performance DC and Bi-directional Solid State Relay For Loads up to 2A @ 80Vdc

### Product Facts

- Bi-directional power FET output
- Optically coupled
- Low on-resistance
- Extremely low leakage current
- Subminiature hermetically sealed package
- Tested per MIL-PRF-28750D and approved to DSCC drawing 89116-006

The MS18-1006 is an optically coupled SSR employing power MOSFET output chips in an inverse series configuration for switching DC or bi-directional loads. A common source connection is provided for the

user to configure the output switching circuit for DC operation up to 2A with very low on-resistance. The relay features fast switching speeds, low off-state leakage, virtually zero offset voltage and the capability to with-

stand high inrush currents up to 350% of rated. The low profile subminiature package is hermetically sealed with pinouts on a 0.1" x 0.3" grid pattern.

### Environmental Characteristics

**Ambient Temperature Range** —  
 Operating — -55°C to +120°C  
 Storage — -55°C to +125°C

**Vibration Resistance** —  
 100 G's, 10-2,000 Hz

**Shock Resistance** —  
 1,500 G's, 0.5 ms pulse

**Constant Acceleration Resistance (Y-1 axis)** —  
 5,000 G's

### Mechanical Characteristics

**Weight (approx.)** —  
 .07 oz. (5 grams)

**Materials** —  
 Header — Kovar® Alloy  
 Cover — Grade A Nickel  
 Pins — Kovar® Alloy, gold plated

Figure 2 - Temperature Derating Curves

Figure 3 - Turn-on and Turn-off Timing

Figure 4 - Functional Block Diagram

Figure 5 - Outline Dimensions

**Notes**

1. An external resistor must be in series with the input at all times.
2. Do not ramp input current. Input transition should be <1.0ms.
3. Input current/series resistor calculation (Approx.):  $I_{(input)} = V_{IN} - V_{DROD}/R_{SERIES}$ .
4. Unless otherwise specified parametric testing is accomplished at 25ma input current.
5. To calculate  $R_{DS(ON)}$  for temperatures other than 25°C, use the following equation:  $T_{(TEMP)} = (R_{DS(ON)} \text{ at } +25^{\circ}\text{C}) \cdot e^{(x \cdot \Delta T)}$  where  $x = 0.0065$ .
6. Inductive loads must be diode suppressed.
7. Continuous load current is rated under conditions of still air.
8. Load may be connected to either side of relay, sink or source modes.
9. Reverse polarity >5Vdc may cause permanent damage
10. Acceptance testing is accomplished in the series (bi-directional) mode.
11. DSCC part numbers 89116-002 & 89116-004 are also available.

### JDS9 Series, AC Relays, 2A/250Vrms Rating

**Input Characteristics**  
**Input Voltage Range** — 3.8 – 32 Vdc

### Electrical Specifications (-55°C to +105°C unless otherwise specified)

<b>Input</b>	
Input supply voltage range (Vcc)	3.8 - 32 Vdc
Input current (max.) @ 5Vdc	15mA <sub>dc</sub>
Must turn-on voltage	3.8V <sub>dc</sub>
Must turn-off voltage	1.5V <sub>dc</sub>
Reverse voltage protection	-32V <sub>dc</sub>
<b>I/O</b>	
Dielectric strength (min.)	1,500V rms/60 Hz.
Insulation resistance (min.) @ 500Vdc	10 <sup>9</sup> ohms
Capacitance (max.)	10pF
<b>Output</b>	
Output current rating (max.)	2A rms (Fig. 2, Note 1)
Surge current (max.), 16ms @ 25°C (max.)	8A pk (Fig. 1, Note 3)
Continuous load voltage (max.)	250V rms
Transient blocking voltage (max.)	500V pk
Frequency range	40 - 440 Hz.
Output voltage drop (max.) @ 1A load current	1.5V rms
Off-state leakage current (max.) @ 250V rms/400 Hz.	1mA rms
Turn-on time (max.)	1/2 cycle
Turn-off time (max.)	1 cycle
Off-state dv/dt (min.), with snubber	200V /μs (Note 2)
Zero voltage turn-on window (max.)	10V
Wave distortion (max.)	4V rms
Output chip junction temperature (max.)	130°C
Thermal resistance (max.), junction to ambient	65°C/W
Thermal resistance (max.), junction to case	15°C/W

### Notes

1. Operation at elevated load currents up to 2 amps is dependent on the use of suitable heatsink to maintain case temperature.
2. Recommended output snubber: R = 100 ohms (1/2 W), C = .01μF (600V).
3. Heating of output chip during and after a surge may cause loss of output blocking capability until junction temperature falls below maximum rating.

## PS12 Series High Performance Solid State Relays For AC Loads up to 10A @ 250Vrms

### Product Facts

- Approved to DSCC drawing 86031
- Optically coupled all solid state relay
- TTL compatible input
- Zero voltage turn-on for low EMI
- Custom power package with screw terminals

The PS12 series solid state relay is designed for AC power switching up to 10 amps at 250Vrms. The circuit employs back-to-back SCRs with zero voltage turn-on for reliable switch-

ing of resistive or reactive loads. TTL compatible input circuitry is optically isolated to 1,500Vrms from the AC load circuit. The relay is offered in two versions: the PS12-1Y with "Y" level

screening per MIL-PRF-28750D, and the PS12-1W screened per Tyco Electronics specifications for KILOVAC relays, equivalent to former "W" level of Mil-R-28750.

10  
KILOVAC Solid State Relays

KILOVAC Part Number	DSCC Part Number	Screening Level
PS12-1Y	86031-001	Y
PS12-1W	N/A	W

## PS12 Series High Performance Solid State Relays For AC Loads up to 10A @ 250Vrms (Continued)

### Environmental Characteristics

#### Ambient Temperature Range —

Operating — -55°C to +95°C

Storage — -55°C to +110°C

#### Vibration Resistance —

30 G's, 78-2,000 Hz

#### Shock Resistance —

100 G's, 6 ms pulse

#### Constant Acceleration Resistance —

100 G's

### Mechanical Characteristics

#### Weight (max.) —

3 oz. (85 grams)

#### Materials —

Case — Plastic, self-extinguishing, epoxy filled

Terminals — Brass, nickel-plated

Base Plate — Aluminum

**NOTE:** Do not exceed 80 in-oz when tightening screws.

### Electrical Specifications (-55°C to +95°C unless otherwise specified)

#### Input

Input supply voltage range (Vcc)	3.8 - 32 Vdc
Input current (max.) @ 5Vdc	16mAdc
Must turn-on voltage	3.8Vdc
Must turn-off voltage	1Vdc
Reverse voltage protection	-32Vdc

#### I/O

Dielectric strength (min.)	1,500V rms/60 Hz.
Insulation resistance (min.) @ 500Vdc	10 <sup>8</sup> ohms
Capacitance (max.)	15pF

#### Output

Output current rating (max.)	10A rms (Fig. 2, Note 1)
Surge current (max.)	100A pk (Fig. 1, Note 2)
Continuous load voltage (max.)	250V rms
Transient blocking voltage (max.)	460V pk
Frequency range	45 - 440 Hz.
Output voltage drop (max.) @ 25A load current	1.5V rms
Off-state leakage current (max.) @ 220V rms/400 Hz.	9mA rms
Turn-on time (max.)	1/2 cycle
Turn-off time (max.)	1 cycle
Off-state dv/dt (min.), with snubber	200V / $\mu$ s (Note 3)
Zero voltage turn-on window (max.)	$\pm$ 15V pk
Output chip junction temperature (max.)	125°C (Note 1)
Thermal resistance (max.), junction to ambient	11.5°C/W
Thermal resistance (max.), junction to case	2.0°C/W
Fusing I <sup>2</sup> T, 1 ms (max.)	150A <sup>2</sup> s
Load power factor (min.)	0.2
Power dissipation (max.)	1.5W/A

### Notes

1. Operation at elevated load currents up to 10 amps is dependent on the use of suitable heatsink to limit junction temperature.
2. Heating of output chips during and after a surge may cause loss of output blocking capability until junction temperature falls below maximum rating.
3. Internal snubber network is provided across output chips.

## PS10 Series High Performance Solid State Relays For AC Loads up to 25A @ 250Vrms

### Product Facts

- Optically coupled all solid state relay
- TTL compatible input
- Zero voltage turn-on for low EMI
- Custom power package

The PS10 series solid state relay is designed for AC power switching up to 25 amps at 250Vrms. The circuit employs back-to-back photo SCRs with zero voltage turn-on for reliable

switching of resistive or reactive loads. TTL compatible input circuitry is optically isolated to 1,500Vrms from the AC load circuit. The relay is offered in two versions: the PS10-1Y with a maximum

zero voltage turn-on window of 15 volts (preferred version for resistive loads), and the PS10-2Y with a maximum window of 40 volts (preferred version for reactive loads).

### Environmental Characteristics

#### Ambient Temperature Range —

Operating — -55°C to +110°C

Storage — -55°C to +125°C

#### Vibration Resistance —

30 G's, 10-3,000 Hz

#### Shock Resistance —

1,500 G's, 0.5 ms pulse

#### Constant Acceleration Resistance

(Y1 axis) —

5,000 G's

### Mechanical Characteristics

#### Weight (max.) —

6 oz. (170 grams)

#### Materials —

Case — Aluminum, hot tin dipped

Terminals — Copper cored wire, gold plated

### Electrical Specifications (-55°C to +105°C unless otherwise specified)

#### Input

Input supply voltage range (Vcc)	4 - 32 Vdc
Input current (max.)	16mA dc
Must turn-on voltage	4Vdc
Must turn-off voltage	1Vdc
Reverse voltage protection	-32Vdc

#### I/O

Dielectric strength (min.)	1,500Vrms/60 Hz.
Insulation resistance (min.) @ 500Vdc	10 <sup>9</sup> ohms
Capacitance (max.)	20pF

#### Output

Output current rating (max.)	25Arms (Fig. 2, Note 1)
Surge current (max.)	80A pk (Fig. 1, Note 2)
Continuous load voltage (max.)	250Vrms
Transient blocking voltage (max.)	500V pk
Frequency range	45 - 440 Hz.
Output voltage drop (max.) @ 25A load current	1.5Vrms
Off-state leakage current (max.) @ 220Vrms/400 Hz.	10mArms
Turn-on time (max.)	1/2 cycle
Turn-off time (max.)	1 cycle
Off-state dv/dt (min.), with snubber	200V / $\mu$ s (Note 3)
Zero voltage turn-on window (max.), PS10-1Y	15V pk
Zero voltage turn-on window (max.), PS10-2Y	40V pk
Waveform distortion (max.)	4Vrms
Output chip junction temperature (max.)	125°C (Note 4)
Thermal resistance (max.), junction to ambient	6.8°C/W
Thermal resistance (max.), junction to case	1.2°C/W

### Notes

1. Operation at elevated load currents up to 25 amps is dependent on the use of suitable heatsink to maintain case temperature per Fig. 2.
2. Heating of output chips during and after a surge may cause loss of output blocking capability until junction temperature falls below maximum rating.
3. Internal snubber network is provided across output chips.
4. Case temperature measurement point is center of mounting surface.

## KILOVAC WD Series, DIN Rail or Screw Mounted Protective Relays

### Product Facts

- WD25 Paralleling (Synch Check) Relays
- WD2759 Over/undervoltage Relays
- WD32 Reverse Power Relays
- WD47 Phase Sequence Relays
- WD5051 Single- or Three-Phase Overcurrent Relays
- WD810U Over/Underfrequency Relays
- File E58048, DIN EN50022-35

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

The WD series offers several different models of protective relays in a common package that is suitable for either DIN rail or screw mounting. These flexible, multifunction devices offer user selectable voltages, sense currents and frequencies. Adjustable time delays are standard. This allows a single part number to be suitable for multiple applications, thereby reducing inventory costs.

### Specifications Common to All Models

**Power Consumption** — 2.5VA, maximum.

**Contact Ratings** — 5 amps, resistive, at 120VAC.  
5 amps, resistive, at 30VDC.

**Isolation from Control to Sense Inputs** — 2,500VAC.

**Mechanical Life** — 10 million operations.

**Shock** — 10g.

**Vibration** — 0.062 (1.57) double amplitude at 10-55 Hz.

**Terminals** — M3.5 screws.

**Maximum Wire Size** — 2 x 24 AWG (2.5mm<sup>2</sup>) solid to DIN 46288 or 2 x 16 AWG (1.5mm<sup>2</sup>) stranded w/end sleeves.

**Operating Temperature Range** — -40°C to +60°C.

**Enclosure** — Plastic case (not sealed).

**Mounting Options** — Snap mounts on standard DIN rail (DIN-EN 50022-35) or panel mounts with M4, M5, #8 or #10 screws.

**Weight** — 14.4 oz. (400g) approximately.

### Installation and Maintenance Information

**Installation** — To mount the WD series protective relay on a DIN rail, hook the top edge of the cutout on the base of the case over one edge of the DIN rail, then press the opposite side of the cutout containing the release clip over the opposite side of the DIN rail. To remove or reposition the relay, lever the release clip and move the relay as required. WD series relays should be installed in a dry location where the ambient temperature will be within the operating temperature range.

**Maintenance** — WD series protective relays are solid state devices that require no maintenance. They are not designed to be serviced by the user. Consult KILOVAC customer service at 805-220-2023 if repairs should be necessary.

### Outline Dimensions

## KILOVAC WD25 Paralleling Relays

### Product Facts

- **Function 25**
- **ANSI/IEEE C37.90-1978**

### WD25 Operation

WD25 paralleling relays are used to ensure that two circuits are synchronized. When voltage, phase relationship and frequency are within the selected synchronizing limits, the output relay will energize. The WD25 paralleling relay allows for a generator to be brought online without damage or system disturbance. WD25 series with a “dead bus” feature will energize for a synchronized condition or an “on line” generator, “dead bus” condition. This “dead bus” feature allows the generator to energize a dead bus. The “double dead bus” feature permits paralleling of two buses when: (a) both the line voltages are equal and in phase, or (b) when either bus is “hot” and the other bus is “dead.”

### Ordering Information

### WD25 Specifications

**Nominal Operating Range** — 120, 208, 277 or 480 VAC, selectable.

**Maximum Sensing Range** — 575VAC.

**Nominal Frequency Range** — 40-400 Hz.

**Contact Form** — 2 form C (DPDT).

### WD25 Calibration

The calibration marks on the faceplate are provided only as guides. Proper calibration requires using an accurate voltmeter. Use the following procedure to calibrate the WD25:

1. Remove the cover.
2. Adjust the SYNC VOLTAGE control fully counterclockwise (CCW). Apply nominal voltage to the LINE B (bus) sensing terminals.
3. Apply the maximum desired synchronization voltage to the LINE A (generator) terminals. This voltage should be in phase with LINE B (bus) voltage and have the same frequency.
4. Slowly adjust the SYNC VOLTAGE control clockwise (CW) until the relay energizes.

### Sense Voltage

Voltage (nominal)	120	208	277	480
Synch Voltage (% of nom.)	6 - 30% (= 4°- 20° electrical degree)			
Dead Bus Voltage (% of nom.)	10 - 70% (Dead Bus)			

### Control Voltage

Model WD25	-0X1	-0X2	-0X3
Input Voltage (VDC)	18 to 54	13.5 to 32	100 to 200
Input Voltage (VAC)	—	—	100 to 140

### WD25 Controls

### WD25 Connections

### WD25 Typical Hookup

**NOTE:** For single dead bus option, connect the generator to 1 & 3 and the bus to 5 & 7.

## KILOVAC WD2759 Over/Undervoltage Relays

### Product Facts

- Function 27/59
- ANSI/IEEE C37.90-1978

### WD2759 Operation

WD2759 AC voltage sensing relays provide voltage monitoring and protection in AC systems from 50 to 400 Hz. Sensing voltages, number of phases, over and undervoltage setpoint, and time delays are user configured. WD2759 voltage relays operate when the externally adjustable trip point is reached. An external time delay control is provided with an adjustment of .5 to 10 seconds. This time delay may be used to prevent false tripping when there are slight variations in the voltage supply. On overvoltage (OV) the output relay energizes when the input signal exceeds the trip point. On undervoltage (UV) the output relay energizes when the input signal goes below the trip point. A green LED indicates power to the relay. Red LED lights indicate the state of the undervoltage and overvoltage trips.

### Sense Voltage

Voltage (nominal)	120	208	277	480
UV Adjustment Range	72-120	125-208	166-277	288-480
OV Adjustment Range	120-168	208-291	277-388	480-672

### Control Voltage

Model WD2759	-001	-002	-003
Input Voltage (VDC)	18 to 54	13.5 to 32	100 to 200
Input Voltage (VAC)	—	—	100 to 140

### WD2759 Specifications

**Nominal Operating Range** — 120, 208, 277 or 480 VAC, selectable.

**Maximum Sensing Range** — 700VAC.

**Nominal Frequency Range** — 50-400 Hz.

**Contact Form** — 1 form C (SPDT) for undervoltage and 1 form C (SPDT) for overvoltage.

**Time Delay Adjustment** — 0.5 to 10 sec.

### WD2759 Calibration

The calibration marks on the faceplate have a maximum error of 10% and are provided only as guides. Proper calibration requires using an accurate voltmeter in parallel with the input signal. Use the following procedure to calibrate your relay.

#### OVER VOLTAGE

1. Remove cover.
2. Adjust the TRIP SET control fully clockwise (CW) and the TIME DELAY control fully counterclockwise (CCW).
3. Apply the desired trip voltage to the relay.
4. Slowly adjust the TRIP SET control CCW until the relay trips.

5. Remove the applied voltage (do not change the voltage level) and set the TIME DELAY control to the desired time delay.
6. Apply the trip voltage to the relay and measure the time to trip.
7. Adjust the TIME DELAY and repeat steps 4 and 5 until you have the desired time delay.

#### UNDER VOLTAGE

1. Remove cover.
2. Adjust the TRIP SET control fully CCW and the TIME DELAY control fully CCW.
3. Decrease the applied sensing voltage from the nominal value until the desired tripping voltage is reached.
4. Slowly adjust the TRIP SET control CW until the relay trips.
5. Set the TIME DELAY control to the desired time delay and apply nominal voltage to the relay.
6. Step down the applied voltage from nominal to a level just below the trip level set in Step 3 and measure the time delay.
7. Adjust the TIME DELAY and repeat steps 4 and 5 until the desired time delay is achieved.

### Ordering Information

Product Facts

■ Function 32

## KILOVAC WD32 Reverse Power Relays

### WD32 Operation

WD32 reverse power relays are used to monitor the direction of power from AC generators. This is accomplished by measuring  $I \cos \phi$ . If current from the generator is reversed and exceeds the adjustable setting, the relay will trip. A 0.5 to 20 second time delay is provided. A correct setting of the trip point and time delay will prevent motorizing the generator and prevent tripping during transients that occur while synchronizing. A POWER LED indicates the condition of the power supply and a REVERSE POWER TRIP LED indicates the output status of the relay.

### WD32 Specifications

**Nominal Operating Range** — 120 to 480 VAC, 1 or 3 phase.

**Maximum Sensing Range** — 575VAC.

**Nominal Sensing Current** — 5A.

**Nominal Frequency Range** — WD32-00X — 40-400 Hz.; WD32-01X — 60 Hz.

**Contact Form** — 2 form C (DPDT).

**Time Delay Adjustment** — 0.5 to 20 sec.

**Sense Current** — Reverse Power Trip: 0.2 to 1.0A (4-20% of nominal sense current).

### Control Voltage

Model WD32	-001	-002	-003
Input Voltage (VDC)	18 to 54	13.5 to 32	100 to 200
Input Voltage (VAC)	—	—	100 to 140

### WD32 Calibration

The calibration marks on the faceplate have a maximum error of 10% and are provided only as guides. Proper calibration requires using an accurate Current Meter in series with the input current. Use the following procedure to calibrate your relay.

#### REVERSE POWER

1. Remove cover.
2. Adjust the TRIP SET control fully clockwise (CW) and the TIME DELAY control fully counterclockwise (CCW).
3. Apply the desired trip current to the relay. NOTE: for the Reverse Power (WD32-00X) a resistive load must be used and for the Reverse kVAR (WD32-01X) an inductive load must be used.
4. Slowly adjust the TRIP SET control CCW until the relay trips.
5. Remove the applied Current and set the TIME DELAY control to the desired time delay.
6. Re-apply the Current (10% more than the trip current) to the relay and measure the time to trip.
7. Adjust the TIME DELAY and repeat steps 4 and 5 until you have the desired time delay.

### WD32 Controls

### WD32 Connections

### WD32 Typical Hookup

## KILOVAC WD47 Phase Sequence Relays

### Product Facts

- Function 47
- ANSI/IEEE C37.90-1978

### WD47 Operation

WD47 phase sequence relays are designed to monitor the correct phase rotation and loss of phase of three phase ac systems from 50 to 400 Hz. An incorrect phase sequence or loss of any phase will cause the WD47 to pickup. When the phase sequence is corrected or the lost phase is restored the contacts dropout. Red LED's light to indicate a fault condition. A green LED indicates power to the relay. The WD47 is often used to detect reverse phase rotation or loss of phase to generators, busses, motors, and transformers.

### WD47 Specifications

- Nominal Operating Range** — 120 to 480 VAC.
- Maximum Sensing Range** — 575VAC.
- Nominal Frequency Range** — 40-400 Hz.
- Contact Form** — 2 form C (DPDT).

### WD47 Calibration

The WD47 has no adjustments and no calibration is necessary. Proper operation may be verified as follows:

1. Apply a nominal, three-phase input with the correct phase sequence. The output relay should dropout and the green LED should light.
2. Apply a nominal, three-phase input with an incorrect phase sequence. The output relay should pickup and the red LED should light.
3. Apply only one or two phases with the correct phase sequence. The output relay should pickup and the red LED should light.

### Control Voltage

Model WD47	-001	-002	-003
Input Voltage (VDC)	18 to 54	13.5 to 32	100 to 200
Input Voltage (VAC)	—	—	100 to 140

### WD47 Typical Hookup

## KILOVAC WD5051 1Ø and 3Ø Overcurrent Relays

### Product Facts

#### ■ Function 5051

### WD5051 Operation

WD5051 AC current sensing relays provide current monitoring and protection in AC systems from 50 to 400 Hz. Nominal Sensing Current, Instantaneous Over Current setpoint, Time Over Current setpoint, and Time Over Current time delay are user configured. WD5051 current relays operate when the externally adjustable trip point is reached. An external time over current time delay control is provided with an adjustment of .5 to 20 seconds. This time delay may be used to prevent false tripping when there are slight variations in the sensed current. With control power applied, the Instantaneous Over Current (IOC) contacts pick-up when the input signal exceeds the IOC trip setpoint. Similarly, with control power applied, the Time Over Current (TOC) contacts pick-up after the preset time delay when the Sense Current rises above the TOC trip setpoint. The IOC contacts may also be configured to function as an under current relay. A green LED indicates power to the relay. Red LED lights indicate the state of the IOC and TOC trips.

### Sense Current

Current (nominal)	1	3	6	8
IOC	0.2 to 1.2	0.6 to 3.6	1.2 to 7.2	1.6 to 9.6
TOC	0.2 to 1.2	0.6 to 3.6	1.2 to 7.2	1.6 to 9.6

### Control Voltage

Model WD5051	-001	-002	-003
Input Voltage (VDC)	18 to 54	13.5 to 32	100 to 200
Input Voltage (VAC)	—	—	100 to 140

### WD5051 Specifications

**Sense Current Full Scale** — 1, 3, 6 or 8A, selectable.

**Maximum Sensing Current** — 10A continuous; 30A for 10 sec.; 60A for 2.5 sec.; 100A for 0.9 sec..

**Nominal Frequency Range** — 50-400 Hz.

**Contact Form** — 1 form C (SPDT) for IOC and 1 form C (SPDT) for TOC.

**TOC Time Delay Adjustment** — 0.5 to 20 sec.

**IOC Operate Time (max.)** — 0.2 sec.

### WD5051 Calibration

The calibration marks on the faceplate are provided only as guides. Proper calibration requires using an accurate ammeter in series with the current source. Use the following procedure to calibrate your relay:

#### OVERCURRENT

1. Remove the cover.
2. Adjust the TRIP SET control fully clockwise (CW) and the TIME DELAY control (TOC only) fully counter-clockwise (CCW).
3. Apply the desired trip current to the relay.
4. Slowly adjust the TRIP SET control CCW until the relay trips.
5. Remove the applied current (do not change the current level). Set the TIME DELAY (TOC only) control to the desired time delay.

## KILOVAC WD810U Over/Underfrequency Relays

### Product Facts

- Function 81 0U
- ANSI/IEEE C37.90-1978

### WD810U Operation

WD810U frequency relays are used to provide frequency monitoring and protection to generators, buses, power supplies, and other equipment. The relay operates at voltages from 120 to 480 Vac and at nominal frequencies of 50, 60, and 400 Hz. External controls include nominal frequency selection, under frequency (UF) trip set, over frequency (OF) trip set, UF time delay, and OF time delay. A green LED indicates power to the relay. Red LED's indicate the status of the UF and OF trips.

### WD810U Specifications

**Nominal Operating Frequency** — 50, 60 or 400 Hz., selectable.

**Maximum Frequency @ 400 Hz. Nominal** — 1000 Hz.

**Nominal Sensing Voltage** — 20-480VAC.

**Maximum Sensing Voltage** — 575VAC.

**Contact Form** — 1 form C (SPDT) for underfrequency and 1 form C (SPDT) for overfrequency.

**Time Delay Adjustment** — 0.5 to 10 sec.

### Ordering Information

#### Typical Part Number ▶

**WD 810U-002**

1. **Basic Series:** \_\_\_\_\_  
WD = DIN mount Protective Relay.
2. **Type:** \_\_\_\_\_  
810U = Over/Underfrequency Relay.
3. **Control Voltage:** \_\_\_\_\_  
001 = 18 to 54VDC  
002 = 13.5 to 32 VDC  
003 = 100-200VDC or 100-140VAC.

**Our authorized distributors are more likely to stock these items.**  
None at present.

### WD810U Calibration

The calibration marks on the faceplate are provided only as guides. Proper calibration requires using an accurate frequency meter in parallel with the input signal.

#### UNDER FREQUENCY

1. Remove the cover.
2. Set the SENSE FREQUENCY to the nominal system frequency. Adjust the Under Frequency TRIP SET fully clockwise (CW) and the TIME DELAY control fully counterclockwise (CCW).
3. Apply the desired trip frequency to the relay.
4. Slowly adjust the TRIP SET control CCW until the relay trips.
5. Set the TIME DELAY control to the desired time delay and apply nominal frequency to the relay.
6. Step down the applied frequency from nominal to just below the trip level set in Step 4 and measure the time delay.
7. Adjust the TIME DELAY and repeat steps 5 and 6 until the desired time delay is set.

#### OVER FREQUENCY

1. Remove the cover.
2. Set the SENSE FREQUENCY to the nominal system frequency. Adjust the OF TRIP SET and TIME DELAY controls fully counterclockwise (CCW).
3. Apply the desired trip frequency to the relay.
4. Slowly adjust the TRIP SET control clockwise (CW) until the relay trips.
5. Set the TIME DELAY control to the desired time delay and apply nominal frequency to the relay.
6. Step down the applied frequency from nominal to just below the trip level set in Step 4 and measure the time delay.
7. Adjust the TIME DELAY and repeat steps 5 and 6 until the desired time delay is set.

### Sense Frequency

Frequency (nominal)	50	60	400
UF Adjustment Range	40-50	48-60	360-400
OF Adjustment Range	50-60	60-72	400-480

### Control Voltage

Model WD810U	-001	-002	-003
Input Voltage (VDC)	18 to 54	13.5 to 32	100 to 200
Input Voltage (VAC)	—	—	100 to 140

### WD810U Controls

### WD810U Connections

### WD810U Typical Hookup

## WUV/WOV DC Series

### Product Facts

- ANSI/IEEE C37.90-1978

#### Undervoltage Models

The relay is energized at normal voltage, N.C. contacts will open and N.O. contacts will close. The relay will de-energize when the voltage drops below the U/V set point.

#### Overvoltage Models

The relay is de-energized at normal voltage, N.C. contacts are closed and N.O. contacts are open. The relay will energize, when the voltage rises above the O/V set point.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage** — 12 VDC to 560 VDC

**Drop-out Point (u/v models)** — 70-100% of nominal voltage, screwdriver adjustable

**Pick-Up Point (o/v models)** — 100-125% of nominal voltage, screwdriver adjustable

**Output Contacts** — One set N.O., One set N.C.

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Operating Temperature Range** — -40°C to +75°C

**Temperature Effects** — Less than 1% voltage drift over the temperature range

**Power Consumption** — 12 to 60 VDC models — 1 W max. 120 to 305 VDC models — 2 W max. 405 to 470 VDC models — 3 W max. 560 VDC model — 4 W max.

**Time Delay** — A short duration delay is provided to prevent nuisance tripping due to momentary dips or surges in voltage. The drop-out delay, following a voltage fault is 75 to 100 milliseconds.

#### Notes:

- Remove black screws for access to the O/V and U/V trip adjustment.
- Clockwise rotation of the adjustment potentiometer will raise the voltage trip point.
- The adjustments are by means of a single turn potentiometer. Use a small screwdriver and do not force beyond the limit stops.

Time Curves DC Overvoltage Relays

**Transient Protection** — All voltage relays will withstand momentary voltage surges of twice the nominal rated input voltage (standard).

**Option "P"** provides additional transient protection which complies with the requirements of ANSI/IEEE C37.90-1978

**Consult factory for additional models.**

### WUV/WOV Series

**Product Facts**

- Function 27/59
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Voltage sensitive relays are available for both AC and DC applications for over/undervoltage protection. Combination over/undervoltage relays provide bandpass capabilities. AC relays are either single or three-phase type. Three phase models are designed to sense the average of the three phases or the highest single phase. Voltage trip points are screwdriver adjustable, and operation is time-delayed so that momentary voltage transients will not cause nuisance tripping.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

**Product Specifications**

- Nominal Voltage** — 120 VAC to 575 VAC
- Phase** — Single or Three
- Line Frequency** — 50-400 Hz
- Pick-up to Drop-out Differential** — 2.5% maximum
- Drop-out Point (u/v models)** — 70-100% of nominal voltage, screwdriver adjustable
- Pick-Up Point (o/v models)** — 100-125% of nominal voltage, screwdriver adjustable
- Output Contacts** — One set N.O., One set N.C.
- Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC
- Operating Temperature Range** — -20°C to +65°C
- Power Consumption** — 2 VA maximum
- Time Delay** — 150-300 ms (UV Model)
- Minimum Life** — 500,000 operations

Single Phase

Three Phase

**Notes:**

1. Remove black screw for access to the voltage trip adjustment.
2. Clockwise rotation of the adjustment potentiometer will raise the voltage trip point.

### Options:

- Blank - Standard
- A = 2 Form A Contacts
- B = 2 Form B Contacts
- H = 125VDC 3A Contacts
- P = Transient Protection

### Product Specifications

- Nominal Voltage** — 100 VAC to 575 VAC
- Phase** — Single or Three
- Line Frequency** — 50-400 Hz
- Pick-up to Drop-out Differential** — 1% typical
- Drop-out Point (u/v models)** — 70-100% of nominal voltage, screwdriver adjustable
- Pick-Up Point (o/v models)** — 100-125% of nominal voltage, screwdriver adjustable
- Output Contacts** — One set N.O., One set N.C.
- Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC
- Operating Temperature Range** — -40°C to +70°C
- Power Consumption** — 3 VA maximum
- Time Delay** — 0.5 to 20 seconds, screwdriver adjustable
- Voltage Reset** — The reset is automatic when voltage returns to normal.

### Notes:

1. Remove black screws for access to the voltage and time delay adjustment potentiometer.
2. Clockwise rotation of the voltage adjust potentiometer will raise the voltage trip point.
3. Clockwise rotation of the time adjust potentiometer will increase the time delay (Pick-up time for O/V models, drop-out time for U/V models).
4. The adjustments are single turn potentiometers, use a small screwdriver and do not force beyond the limit stops.
5. On U/V models, when the voltage falls to approximately 33% of nominal or below, the relay will drop out in 0.150 to 0.300 seconds, regardless of the time delay setting.

**Transient Protection** — All voltage relays will withstand momentary voltage surges of twice the nominal rated input voltage (standard).

**Option "P"** provides additional transient protection which complies with the requirements of ANSI/IEEE C37.90-1978

**Consult factory for additional models.**

## WOUV DC Series, Over/Undervoltage

### Product Facts

- ANSI/IEEE C37.90-1978

The relay will energize at normal voltage conditions. The normally open contacts will close, and the normally closed contacts will open. The relay will de-energize during over or undervoltage conditions. Reset is automatic when the voltage returns to normal.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage ( $\pm 10\%$ )** — 12 VDC to 560 VDC

**Drop-out Point (u/v models)** — 70-100% of nominal voltage, screwdriver adjustable

**Pick-Up Point (o/v models)** — 100-125% of nominal voltage, screwdriver adjustable

**Output Contacts** — One set N.O., One set N.C.

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Operating Temperature Range** —  $-40^{\circ}\text{C}$  to  $+75^{\circ}\text{C}$

**Temperature Effects** — Less than 1% voltage drift over the temperature range.

**Power Consumption** — 12 to 60 VDC models — 1 W max. 120 to 305 VDC models — 2 W max. 405 to 470 VDC models — 3 W max. 560 VDC Model — 4 W max.

**Time Delay** — A short duration delay is provided to prevent nuisance tripping due to momentary dips or surges in voltage. The drop-out delay, following a voltage fault is 75 to 100 milliseconds

#### Notes:

- Remove black screws for access to the O/V and U/V trip adjustment.
- Clockwise rotation of the adjustment potentiometer will raise the voltage trip point.
- The adjustments are by means of a single turn potentiometer. Use a small screwdriver and do not force beyond the limit stops.

## WOUVT Series, Over/Undervoltage

### Product Facts

- Function 27/59
- ANSI/IEEE C37.90-1978

Voltage sensitive relays are available for both AC and DC applications for overvoltage and undervoltage protection. Combination over/undervoltage relays provide band-pass capabilities. AC relays are either single or three-phase type. Three phase relays are designed to sense the average of the three phases. Voltage trip points are screwdriver adjustable, and operation is time-delayed so that momentary voltage transients will not cause nuisance tripping.

### Operation

The relay will energize at normal voltage condition. The normally closed contact (Form B) will open and the normally open (Form A) will close. The relay will de-energize after time delay when over or undervoltage condition is reached.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage** — 120 VAC to 575 VAC

**Phase** — Single or Three

**Line Frequency** — 50-400 Hz

**Type of Sensing** — Average of all three phases

**Undervoltage Trip** — 70-100% of nominal voltage, screwdriver adjustable

**Overvoltage Trip** — 100-125% of nominal voltage, screwdriver adjustable

**Drop-out Time Delay** — 0.5 to 20 seconds, screwdriver adjustable

**Pick-up to Drop-out Differential** — 2% maximum

**Output Contacts** — One set N.O., One set N.C.

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Operating Temperature Range** — -40°C to +70°C

**Power Consumption** — 4 VA maximum

### Notes:

1. Remove black screw for access to the voltage trip and time delay adjustment potentiometer.
2. Clockwise rotation of the voltage adjustment potentiometer will raise the voltage trip point.
3. Clockwise rotation of the time adjustment potentiometer will increase the drop-out time delay.

## 250 Series, Over/Undervoltage

### Product Facts

- Function 27/59
- ANSI/IEEE C37.90-1978

The 250 series relays provide combined Overvoltage and Undervoltage protection in a single compact unit.

Models are available for single phase or three phase applications, and are suitable for either 50 Hz, 60 Hz, or 400 Hz operation. The trip point is adjustable.

A transistorized circuit provides a sharp and accurate response at the preset tripping voltage; unaffected by temperature or frequency variations.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage** — See Ordering Information

**Undervoltage Trip** — 70-100% of nominal voltage, screwdriver adjustable

**Overvoltage Trip** — 100-125% of nominal voltage, screwdriver adjustable

**Pick-up to Drop-out Differential** — 3% maximum

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Contact Form** — One set N.O., one set N.C.

**Operating Temperature Range** — -20°C to +85°C

### Notes:

1. Remove screws for access the overvoltage or undervoltage trip adjustments. Clockwise rotation of the adjustment potentiometer will raise the trip point.

### Contact Arrangements

**NC** — Open at nominal voltage. Closed at Overvoltage and Undervoltage

**NO** — Closed at nominal voltage. Open at Overvoltage and Undervoltage

### Ordering Information

Sample Part Number ►

- 255X\* = 460 VAC, 3 Phase, 3 Wire, 50-400 Hz
- 256X\* = 575 VAC, 3 Phase, 3 Wire, 50-400 Hz

Mounting

- Blank = Stud
- X = Flange

\* Enclosure height is 3.835"

Consult factory for additional models.

## D100X Series, Close Differential

### Product Facts

- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Close Differential Relays are voltage sensitive. The pick-up and drop-out voltage settings are independently adjustable, which allows precise setting of the differential voltage. This relay is available in a wide range of AC and DC voltages. Their primary application is the sensing and control of transfer switches.

### Operation

Monitors a single phase AC signal, and is used for undervoltage detection. Has separate pick-up and drop-out voltage settings, providing an adjustable hysteresis.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

- Nominal Voltage** — AC, Single Phase, see Ordering Information
- Nominal Frequency** — 50 to 400 Hz.
- Pick-Up Adjustment Range** — 67-100% of nominal voltage
- Drop-Out Adjustment Range** — 67-100% of nominal voltage
- Maximum Differential Setting** — 33% of nominal voltage
- Minimum Differential Setting** — 2% of nominal voltage
- Output Contacts** — Form C (SPDT)
- Contact Ratings** — 5 Amp resistive at 120 VAC or 28 VDC
- Operating Temperature Range** — -20°C to +85°C
- Expected Life** — 10 million operations
- Inverse Time Drop-Out** — The differential relay contains a time delay before operation so that momentary voltage transients do not affect the operation of the relay. The time delay has an inverse time characteristic so that excessive voltage conditions will cause a more rapid drop-out. This time delay is approximately 200mSec. (12 cycles) at the trip settings and decreases to 30 mSec. at approximately 15% beyond the trip settings.

### Notes:

1. Remove black nylon protective screws to gain access to the two internal adjustment potentiometers.
2. Clockwise rotation of the pick-up and drop-out adjustment will raise the voltage trip point.
3. The relay contacts are shown in the de-energized state.

### Ordering Information

## D101X Series, 3 Phase Adjustable, Close Differential

### Product Facts

- ANSI/IEEE C37.90-1978
- UL File No. E58048
- CSA File No. LR61158

Close Differential Relays are voltage sensitive. The pick-up and drop-out voltage settings are independently adjustable, which allows precise setting of the differential voltage. This relay is available in a wide range of AC voltages. Their primary application is the sensing and control of transfer switches.

### Operation

The output contacts will close when the voltage of all three phases is above the pre-set pick-up point, and will open when any one phase drops below its drop-out setting.

### Product Specifications

**Nominal Voltage** — AC, Three Phase, see Ordering Information

**Nominal Frequency** — 50 to 500 Hz.

**Pick-Up Adjustment Range** — 66-100% of nominal voltage, screw-driver adjustable

**Drop-Out Adjustment Range** — 66-100% of nominal voltage, screw-driver adjustable

**Output Contacts** — SPNO

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Operating Temperature Range** — -20°C to +85°C

### Notes:

1. Remove screws for access to pick-up and drop-out trip adjustments.
2. Clockwise rotation of the pick-up and drop-out adjustment will raise the voltage trip point.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

## 700 Series w/ Adjustable Time Delay

### Product Facts

- Function 32
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Several types of Reverse Power Relays are available including relays sensitive to reverse reactive power (kVAR). KILOVAC is the leading brand of reverse power relays. Our rugged sealed construction provides continuous and reliable operation unaffected by shock, vibration or other severe environments. Reverse Power Relays are used for the protection of generator sets operating in parallel.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

**Model 710TD**

Designed for 120, 220 or 266 volt line to neutral connection

**Model 720TD (X) thru 724TD (X)**

For operation on three phase, three wire

### Ordering Information

Sample Part Number ▶

**720TDX**

Type:

- 710TD = 120V, 220V, 266V line to neutral
- 720TD = 120V, L-L, 3 Phase
- 721TD = 230V, L-L, 3 Phase
- 722TD = 380V, L-L, 3 Phase
- 723TD = 460V, L-L, 3 Phase
- 724TD = 575V, L-L, 3 Phase
- 725TD = 416V, L-L, 3 Phase
- 730TD = 120 V, 230 V, 380 V, 460 V, L-L, 3 Phase or 120 V, Single Phase, L-N

Mounting:

- X = Flange
- Blank = Stud

Options:

- 7 = Reverse Inductive, 60 Hz

### Product Specifications

#### Line Voltage —

Model 710TD — 120 V, 220 V or 266 V, line to neutral  
 Model 730TD — 120 V, 230 V, 380 V, 460 V, L-L, 3 Phase or 120 V, Single Phase, L-N

All models for three phase, three wire sensing are available, see Ordering Information

#### Line Frequency — 50-500 Hz.

#### Current Requirements —

0 to 5 amp max direct or from CT with 5 amp secondary

#### Trip Adjustment —

Screwdriver adjustable 4% to 20% (of the 5 amp rating)

#### Time Delay Adjustment — 0.5 to 20 seconds, screwdriver adjustable

#### Output Contacts — One set N.O., one set N.C.

#### Contact Ratings — 5 amp resistive at 120 AC or 28 Vdc

#### Power Consumption —

Voltage circuit — 2 VA max.  
 Current circuit — 4 VA max.

#### Weight — 2.75 lbs. max.

### Notes:

1. Remove screw for access to the pick-up and time delay adjustments.
2. Clockwise rotation of the pick-up adjustment will raise the reverse trip point.
3. Clockwise rotation of the time adjustment will increase the time delay.
4. Polarity of the voltage and the current connections must be observed for true power sensing.
5. Interchanging connections on terminals 5 and 6, will cause the output contacts to pick-up on forward power and dropout on no power or reverse power.

Consult factory for additional models.

### 1000 Series

**Product Facts**

- Function 47
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Phase failure relays protect motors, equipment and personnel from damage or injury caused by open phase, reversed phase sequence, or low voltage in a three phase system. Models are available for 50 and 60 Hz with voltages up to 575 volts. Motor control switchboards are a common application.

**Operation**

The contacts of the relay will close only when it senses normal conditions of three phase power at the proper phase sequence.

The relay contacts will remain in their normally open position (de-energized) when voltage with incorrect phase sequence is applied, one or more phases are open, or at undervoltage condition.

TERMINAL STRIPS  
#6 - 32 SCREWS

**Product Specifications**

- Nominal Voltage** — See Ordering Information
- Voltage Drop-Out** — 75% to 100% of nominal, screwdriver adjustable
- Pick-Up to Drop-Out Differential** — 3% approx.
- Ambient Operating Temperature** — -40°C to +70°C
- Temperature Drift** — ± 1%
- Time Delay** — See Curve
- Output Contacts** — One set, normally open
- Contact Ratings** —  
10 amp at 28 VDC resistive  
10 amp at 230 VAC resistive

**Notes:**

1. Remove screw for access to the undervoltage adjustment.
2. Clockwise rotation of the adjustment potentiometer will raise the drop-out voltage.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

**Ordering Information**

Sample Part Number ►

1004X

Type:

- 1001 = 120 V, 60 Hz, 3 phase, L-L
- 1007 = 208 V, 60 Hz, 3 phase, L-L
- 1002 = 230 V, 60 Hz, 3 phase, L-L
- 1012 = 300 V, 60 Hz, 3 phase, L-L
- 1013 = 350 V, 60 Hz, 3 phase, L-L
- 1003 = 380 V, 50 Hz, 3 phase, L-L
- 1004 = 460 V, 60 Hz, 3 phase, L-L
- 1005 = 525 V, 60 Hz, 3 phase, L-L
- 1006 = 575 V, 60 Hz, 3 Phase, L-L

Mounting:

- X = Flange
- Blank - Stud

Consult factory for additional models.

## 900 Series

### Product Facts

#### ■ Function 47

Phase sequence relays are designed to monitor the correct phase rotation of a three phase system. Several models are available from 50 Hz, 60 Hz, and 400 Hz with voltages up to 575 volts. High shock relay output and reverse contacts are also available.

#### Operation

The relay remains de-energized when voltage in the proper phase sequence (A, B, C) is applied, the relay is energized when voltage with incorrect sequence (A, C, B) is applied.

### Product Specifications

**Input Voltage** — See Ordering Information

**Output Contacts** — SPDT

**Contact Ratings** — 5 amp resistive at 120 Vac or 28 Vdc

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Ordering Information

Sample Part Number ►

**901X**

Type: \_\_\_\_\_

- 900-3X = 120 VAC, 60 Hz, 3 phase, L-L
- 910X = 190-520 VAC, 60 Hz, 3 Phase, L-L
- 900-2X = 208-230, 50/60 Hz, 3 Phase
- 900X = 230 VAC, 60 Hz, 3 phase, L-L
- 901X = 460 VAC, 60 Hz, 3 phase, L-L

Mounting: \_\_\_\_\_

- X = Flange
- Blank - Stud

Consult factory for additional models.

### WCB Series

**Product Facts**

- Function 60 or 87
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Current Balance Relays are designed to sense unbalanced current flow in a three phase system. The primary application of Current Balance Relays is to protect three phase motors against phase unbalance or phase failure.

**Operation**

With control voltage applied to the relay, the output contacts will energize when the three phase currents are balanced (including zero currents), and will be de-energize by unbalance currents.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

**Product Specifications**

**Line Current** — Three Phase, AC current, 50-400 Hz Direct or from CT.  
 5 amp continuously  
 20 amp, 30 sec.  
 200 amp, 0.10 sec.

**Control Voltage** — See Ordering Information

**Unbalanced Trip Point** — Screwdriver adjustable. Adjustment range in accordance with ordering information. (The unbalanced value is defined as the difference between the highest and the lowest phase current).

**Drop-Out Time Delay** — 0.9 to 1.3 seconds

**Surge Withstand Capability** — In compliance with C37.90B ANSI/IEEE

**Operating Temperature** — -40°C to +70°C

**Burden** — Current input — 5.0 VA, Phase Control voltage — 3.0 VA

**Contact Ratings** — One set, N.O., One set N.C. 5 amp resistive at 120 VAC or 28 VDC

**Notes:**

1. Remove black screw for access to the trip adjustment.
2. Clockwise rotation of the adjustment potentiometer will raise the unbalance trip point.
3. The output contacts are shown de-energized.

**Ordering Information**

**Sample Part Number** ▶ **WCB -120AC -1 -A**

**Trip Adjustment Range** \_\_\_\_\_  
 .5 = 0.1 amp to 0.5 amps  
 1 = 0.2 amp to 1 amp  
 2 = 0.4 amp to 2 amp

**Options:** \_\_\_\_\_  
 A = two normally open contacts  
 B = two normally closed contacts

## WC1 & WCT1 Series, Overcurrent

### Product Facts

- Function 50/51
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Current sensitive relays are available for single and three phase applications. Voltage controlled overcurrent relays protect generators against fault currents below the full rated value, when the fault produces a voltage drop as in the case of short circuits or grounds. Phase balance relays are available to sense and control unbalanced current flow in three phase systems. Current differential relays operate when the differential between two currents exceeds preset values. Over/under current phase-band relays are also available.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

- Line Current** — Single Phase, AC current, 50-400 Hz Direct or from CT
- Control Voltage** — See Ordering Information
- Trip Point** — Screwdriver adjustable. Adjustment range in accordance with ordering information.
- Pick-Up to Drop-Out Differential** — Approximately 0.1 amp.
- Overcurrent Allowance** — Maximum of 500% for 0.25 seconds
- Surge Withstand Capability** — In compliance with C37.90B ANSI/IEEE
- Operating Temperature** — -40°C to +70°C
- Temperature Drift** — ± .05%
- Burden** — Current input — 1.2 VA, Control voltage — 2.5 VA
- Contact Ratings** — One set, N.O., One set N.C. 5 amp resistive at 120 VAC or 28 VDC

### Notes:

1. Remove black screws for access to the current pick-up and the time delay adjustment.
2. Clockwise rotation of the pick-up adjustment will raise the current trip point.
3. Clockwise rotation of the time delay adjustment, (Type WCT1 only) will increase the time delay.

### Time Delay

**Standard Time Delay (WC1 Series)** — A fixed inverse time delay is incorporated in all overcurrent relays and is represented by the typical curves shown.

**Adjustable Time Delay (WCT1 Series)** — The time delay is field adjustable. The standard time delay can be increased by any value between 0.5 and 20 seconds.

### Ordering Information

Sample Part Number ► **WCT1 -48DC -5 -B**

Type: \_\_\_\_\_  
 WC1 = Per Time Curves  
 WCT1 = Adjustable Time Delay

Typical Curves (WC3 Series)

See previous page for 1-phase models and consult factory for additional models.

## WCD Series

### Product Facts

- Function 87
- ANSI/IEEE C37.90-1978

Current Differential Relays are used for the protection of transformers, motors and generators, by comparing the magnitude of the current entering and leaving the protected circuit. On a given phase winding, any difference between the two currents will indicate an internal fault; the relay will sense the vectorial difference between the two currents of the protected section and will initiate a quick disconnection of the unit, to prevent disastrous consequences.

The relay may also be used to protect internal faults on transformers, such as: ground faults, shorted winding, leakage between primary and secondary, etc. It will sense and compare primary vs. secondary currents, once the turns ratio has been taken into consideration.

### Operation

With control voltage applied, the output contacts (shown in the de-energized position) will remain de-energized as long as the difference between the two input currents remains below the pre-set trip value. The contact will transfer to the energized position when the current difference exceeds the trip value.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Ordering Information

AC — 2 VA max.
- Output Contacts** —  
One set, N.O., One set N.C.
- Contact Ratings** —  
5 amp resistive at 120 VAC or 28 VDC

### Notes:

1. Remove black screws for access to the trip adjustments.
2. Clockwise rotation of the adjustment potentiometer will raise the current differential trip point.
3. The output contacts are shown de-energized.

Consult factory for additional models.

## 1800 Series

### Product Facts

- Function 25
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

### Application

These relays are designed for automatic paralleling (synchronizing) of generators. The relays sense the phase angle displacement and the amplitude difference between two voltages and permit paralleling only when both voltages are equal and in phase. A short time delay is provided to assure that the frequencies are essentially the same at the moment of paralleling. The basic series is designed to parallel two or more energized AC generators. The "Dead Bus" type provides paralleling of AC generators to the main bus. They permit electrical connection of an energized generator to an un-energized line (Dead Bus). If the bus is energized, connection of the generator to the bus is permitted only when both are synchronized.

### Notes

- \*Permits paralleling of two generators only when they are "on-line" and their voltages are equal and in phase (synchronized)
- \*\*Normally used to permit paralleling of a generator to a bus when: (a) both line voltages are equal and in phase, or: (b) when the generator is "on-line" and the bus is "dead"
- \*\*\*Permits paralleling of two power lines (buses) when: (a) both line voltages are equal and in phase, or: (b) when either bus is "hot" and the other bus is "dead"

### Output Contact Options —

1. Two Form A. (Add -A to Model Number)
2. Two Form B. (Add -B to Model Number)

Consult factory for additional models.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Sensing Voltage** — 120 V, 230 V, 277 V, 380 V, 460 V, 575 V, & 415 V

**Line Frequency** — 50-500 Hz

### Pick-Up Adjustment —

External adjustment for field sensing of 10-30% of nominal input voltage. (Vertical voltage differential of 6 to 18 electrical degrees).

**Time Delay** — Fixed @ 60 milliseconds is provided to assure that the frequencies of both input lines are sufficiently close to permit paralleling within the preset window.

### Output Contacts —

One set N.O., one set N.C.  
5 amp resistive at 120 VAC or 28 VDC

### A. 3 Phase, 4 Wire System

- Connect phase "A" of LINE 1 to terminal 1
- Connect phase "A" of LINE 2 to terminal 3
- Connect the neutrals to terminals 2 & 4

### B. 3 Phase, 3 Wire or 1 Phase, 2 Wire System

- Connect phase "A" of LINE 1 to terminal 1
- Connect phase "B" of LINE 1 to terminal 2
- Connect phase "A" of LINE 2 to terminal 3
- Connect phase "B" of LINE 2 to terminal 4

## WOF & WUF Series

### Product Facts

- Function 81 O/U
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

### Application

The output contacts of frequency relays are energized when the frequency exceeds the adjustable set point. Overfrequency and underfrequency relays are available in 50, 60 and 400Hz. Combination over/underfrequency "band pass" relays are also available. These are energized at rated frequency and de-energized during overfrequency or underfrequency conditions. Frequency Differential relays are energized above the preset frequency. The pick-up and drop-out frequency settings are independently adjustable.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage (±20%)** — 120, 230, 380 and 460 volts

**Nominal Frequencies** — 50, 60 and 400 Hz.

**Trip Point** — Screwdriver adjustable. Adjustment range in accordance with ordering information.

**Operating Temperature** — -20°C to +65°C

**Differential** — The frequency pitch-up to drop-out differential is .5% max

**Voltage Drift** — ±.05% maximum frequency error for input voltage variation of ±10%

**Time Delay** — See Time versus Frequency curves

**Surge Withstand Capability** — In compliance with C37.90B ANSI/IEEE

**Output Contacts** — One set N.O., one set N.C.

**Contact Ratings** — 5 amp resistive at 120 VAC or 28VDC

Typical Curves (WOF Series)

Typical Curves (WUF Series)

### Ordering Information

Sample Part Number ▶

WUF -12 -5060 -T

**Type:** —  
WUF = Underfrequency  
WOF = Overfrequency

**Input Voltage (VAC)** —

- 12 = 120
- 23 = 230
- 38 = 380
- 46 = 460

**Frequency Range** —

- 4050 = 40-50 HZ
- 5060 = 50-60 HZ
- 6070 = 60-70 HZ
- 3540 = 350-400 HZ
- 4045 = 400-450 HZ (overfrequency only)

**Time Delay Options** —

- blank = Per Time Curve
- T = Adjustable

### Time Delay

**Standard Time Delay** — A minimum, fixed inverse time delay is incorporated in all frequency relays to prevent nuisance tripping and is represented by the typical curves shown above.

**Adjustable Time Delay** — If additional time delay is required, a suffix "T" must be added to the part number. This allows the minimum fixed time delay to be field-adjustable up to 20 seconds.

### Notes:

1. Remove black screws for access to the frequency and the time adjustments.
2. Clockwise rotation of the frequency potentiometer will raise the frequency trip point.
3. Clockwise rotation of the time adjustment, option "T" will increase the time for overfrequency relays and dropout time for underfrequency relays.

Consult factory for additional models.

## WOUF Series, Over/Underfrequency

### Product Facts

- Function 81 O/U
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

The output contacts of frequency relays are energized when the frequency exceeds the adjustable set point. Overfrequency and underfrequency relays are available in 50, 60 and 400Hz. Combination over/underfrequency “band pass” relays are also available. These are energized at rated frequency and de-energized during overfrequency or underfrequency conditions. Frequency Differential relays are energized above the preset frequency. The pick-up and drop-out frequency settings are independently adjustable.

### Operation

The relay will energize at normal frequency; The normally closed contacts will open and the normally open contacts will close. The relay will drop-out after time delay at overfrequency or underfrequency.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage (±20%)** — 120, 230, 380 and 460 volts

**Nominal Frequencies** — 50, 60 and 400 Hz.

**Trip Point** — Screwdriver adjustable. Adjustment range in accordance with ordering information.

**Operating Temperature** — -40°C to +65°C

**Differential** — The frequency pick-up to drop-out differential is .5% max

**Voltage Drift** — ± 0.05% maximum frequency error for input voltage variation of ±10%

**Time Delay** — See Time versus Frequency curves

**Surge Withstand Capability** — In compliance with C37-90B ANSI/IEEE

**Output Contacts** — One set N.O., one set N.C.

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

### Notes:

1. Remove black screws for access to the frequency and the time adjustments.
2. Clockwise rotation of the frequency potentiometer will raise the frequency trip point.
3. Clockwise rotation of the time adjustment, option “T” will increase the drop-out time delay.

### Time Delay

**Standard Time Delay** — A minimum, fixed inverse time delay is incorporated in all frequency relays to prevent nuisance tripping and is represented by the typical curves shown below.

**Adjustable Time Delay** — If additional time delay is required, a suffix “T” must be added to the part number. This allows the minimum fixed time delay to be field-adjustable up to 20 seconds.

### 20-050-19 Series (Voltage/Frequency)

**Product Facts**

- Function 27/81
- ANSI/IEEE C37.90-1978
- UL file No. E58048 
- CSA file No. LR61158 

The output contacts of frequency relays are energized when the frequency exceeds the adjustable set point. Overfrequency and underfrequency relays are available in 50, 60, and 400Hz. Combination over/underfrequency “band pass” relays are also available. These are energized at rated frequency and de-energized during overfrequency or underfrequency conditions. Frequency Differential relays are energized above the preset frequency. The pick-up and drop-out frequency settings are independently adjustable.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

**Product Specifications**

- Nominal Voltage (±20%)** — 120 VAC, Single Phase
- Nominal Frequency** — 60 Hz.
- Voltage Adjustment Range (PU)** — 85 to 120 VAC
- Frequency Adjustment Range (PU)** — 45 to 60 Hz
- Output Contacts** — One set N.O., one set N.C.
- Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Notes:**

1. Remove black screws for access to the voltage and frequency and the time adjustments.
2. Clockwise rotation of the voltage adjustment potentiometer will raise the voltage trip point.
3. Clockwise rotation of the frequency adjustment will raise the frequency time point.

**Ordering Information**

Sample Part Number ► **20-050-19X**

Type: \_\_\_\_\_  
 20-050-19 = Voltage/Frequency

Mounting Options \_\_\_\_\_

- Blank = stud
- X = Flange

Options:  
 P = Surge Suppression

Consult factory for additional models.

## WGD Series — Floating Ground

### Product Facts

- ANSI/IEEE C37.90-1978
- UL file No. E58048
- CSA file No. LR61158

Ground Fault Detectors are used to sense leakage current to ground in power transformers and generators. They are available for both AC and DC systems. Some generator systems provide auxiliary power outlets for small equipment. TE Connectivity GFD's eliminate personnel risk of accessing these outlets if a ground fault exists. Diesel locomotives and railroad line signal boxes also use GFD's for operational control purposes. The GFD monitors both positive and negative grounds for fault currents and can trigger either notification or system shut-down if these are detected. GFD's are available for both grounded and ungrounded systems.

### Operation

When the resistance between any phase to ground falls below the set point the relay will energize; The normally closed contacts will open, the normally open contacts will close.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Ordering Information

Sample Part Number ►

WGD-

Type:	Volts L-L	Trip Point Adj. Phase to Ground
115-120AC	115	11-55KΩ
120-120AC	120	12-60KΩ
200-120AC	200	20-100KΩ
208-120AC	208	21-105KΩ
220-120AC	220	22-110KΩ
230-120AC	230	23-115KΩ
240-120AC	240	23-115KΩ
380-120AC	380	38-190KΩ
400-120AC	400	40-200KΩ
416-120AC	416	42-210KΩ
440-120AC	440	44-220KΩ
460-120AC	460	46-230KΩ
480-120AC	480	48-240KΩ
525-120AC	525	52-260KΩ
575-120AC	575	57-285KΩ
600-120AC	600	60-300KΩ

### Product Specifications

**Sensing Voltage (±10%)** — 3 phase, 3-wire. See Ordering Information.

**Control Voltage** — 120 Volts AC

**Contacts Trip Points (sensitivity)** — Screwdriver adjustable. See Ordering Information.

**Pick-up Time Delay** — 1.5 seconds approximately

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Operating Temperature** — -40°C to +65°C

**Temperature Effects** — ± 1% over temperature range

**Power Consumption** — Sensing: —2 mA/Phase Approx., Control — 2VA at 120VAC

**Surge Withstand Capability** — In accordance with the requirements of ANSI/IEEE

### Notes:

1. Remove screw for access to the pick-up adjustment potentiometer.
2. Clockwise rotation of the adjustment potentiometer will raise the relay sensitivity.

11

Protective Relays

## WC1G Series — Grounded

Ground Fault Detectors are designed to provide very sensitive Ground-Current protection for motor, equipment and personnel from damage or electrical shock. In a ground system, the leakage current is monitored through a toroidal or doughnut current transformer placed around the supply conductors to a motor, transformer, equipment or outlets. Since the sums of the current in a system add to zero, the relay is responsive only to ground-fault current.

### Operation

The output contacts are shown in de-energized position. They will change state when these conditions are met:

1. Control voltage is applied.
2. Leakage current exceed the trip setting.

### Product Specifications

**CT Window Diameter** — 1.7 inches (std) or can be specified by customer

**Leakage Current Range** — 10 to 60 mA

**Control Voltage** — See Ordering Information

**Output Contacts** — One set N.C., one set N.O.

**Operating Temperature** — 40°C to +65°C

**Contact Ratings** — 10 amp resistive at 250 Vac, 8 amp. resistive @ 30 Vdc

### Notes:

1. Remove screw for access to the pick-up adjustment potentiometer.
2. Clockwise rotation of the adjustment potentiometer will raise the relay sensitivity.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

400-56X	208VAC, 24-48V Range, 2 N.O. Contacts
400-57X	120VAC, 25 Hz, 84-120V, 125VDC 3A Contacts
400-58X	277VAC, 194-277V Range, 0.020 Sec. T.D.
400-59X	139VAC, 97-159V Range
400-60X	240VAC, 84-120V Range
400-61PX	120VAC, Similar to WUV-1-120P
400-62X	120VAC, 30-42V Range, 125VDC Contacts
400-63X	120VAC, 30-42V Range, 120VAC Contacts

**AC, SINGLE PHASE, 400 HZ**

402X	120VAC
402-SX	120VAC, Hi-Shock, NSN 5945-00-258-6662
402-1X	240VAC, 170-240V Range
402-1SX	240VAC, High Shock
402-2X	120VAC, 90-120V Range, 0.3 Sec. T.D., Set to 96V
402-3X	120VAC, Similar to 402-2X with 10A Contact
402-4X	120VAC, Similar to 402-2X with 0.15 Sec. T.D.

**AC & DC, SINGLE PHASE, CLOSE DIFFERENTIAL**

D100-10X	120VAC, 50-500Hz, -40 to +75 deg. C
D100-13X	450VAC, D.O. 60-100%, P.U. 66-100%
D100-15X	120VAC, 50-500Hz, 125VDC, 1 Amp Contacts
D100-16X	208VAC, 50-500Hz, 125VDC, 1 Amp Contacts
D100-17X	120VAC, 50-500Hz, 450VAC Input Capacitor, GE

401-46X	480VAC, Similar to 401-2X with Suppression
401-47X	380VAC, 3W, 2.0 Sec. T.D.
401-48X	208VAC, 3W, 145-208V Range
401-49X	20.8VAC, 3W, 15.5-20.8V Range
401-50X	120VAC, 3W, 0-10 Sec. T.D.
401-51SX	90/156 VAC, 4W, Similar to 401-17SX
401-52X	480VAC, 3W, Sim. to 401-10X
401-53X	120/208VAC, 4W, 1 N.O., 1 N.C.
401-54X	400VAC, 3W, 300-400V Range
401-55X	600VAC, 3W, 480-600V Range
401-58X	120/208VAC, Sim. to 401X except 2 N.C. Contacts
401-59X	220-380VAC, Dual Voltage 220V or 380V
401-60X	480VAC, 1 N.O., 1 N.C. Contact, 2-3 Sec. T.D.
401-61X	120VAC, 3W, 85-120V Range (L-L), 1.0 Sec. T.D.
401-62X	380VAC, 3W, 220VAC 5A Contacts
401-63X	120VAC, 3W, Sim. to 401-6X with Suppression
401-67X	120/208VAC, 4W, 1.0 Sec. T.D., -55F to +150F
401-68X	120VAC, 3W, 85-120V Range, 2-3 Sec. T.D.
401-69X	120/208VAC, 4W, 85-120V Range, Lowest of 3
401-70X	133/230VAC, 4W, 99-133V Range, Lowest of 3
401-71X	220/380VAC, 4W, 154-220V Range, Lowest of 3
401-72X	266/460VAC, 4W, 186-266V Range, Lowest of 3
401-74X	66/115VAC, 4W, 65-75% Adj., Supp., 125VDC Cont.
401-75X	115/200VAC, 3W, 65-75% Adj., Suppression
401-76SX	450VAC, 3W, 382-450V, 0.3-0.5S T.D., Hi-Shock
401-77X	120/208VAC, 4W, 0.5-10 Sec. T.D., Lowest of 3
401-79X	480VAC, 3W, 0.2-0.3 Sec. T.D., Suppression
401-80X	76VAC, 3W, 53-76V Range
401-81X	120/208VAC, Sim. to 401-12X with 48VDC Contacts
401-82X	104VAC, 3W, Similar to WUV-3-104
401-83SX	120/208VAC, MIL-R-2033A
401-84X	180VAC, 3W, Similar to WUV-3-180
401-85SX	480VAC, Similar to 401-25SX except 480V
401-86SX	380VAC, Similar to 401-25SX except 380V
401-87SX	240VAC, Similar to 401-25SX except 240V
401-90X	120/208VAC, 4W, 0.5 Sec. T.D.
401-93X	480VAC, 3W Fast Oper. 50mS., Suppression
401-97X	69/120VAC, Lowest of 3
401-98X	480VAC, Sim. to 401TD-9HX with 2.0 Sec. T.D.
<b>AC, THREE PHASE, 400 HZ</b>	
403X	120/208VAC, 4W
403-1X	115/200VAC, 4W, 35-400mS T.D.
403-1SX	115VAC, 3W, Hi-Shock
403-2X	120VAC, 3W
403-3X	120/208VAC, 4W, 1.0 Sec. T.D.
403-4X	254/440VAC, 4W
403-5X	120/208VAC, 4W, 2 N.C. Contacts

403-7SX	480VAC, 3W, T.D., Hi-Shock
403-10X	120/208VAC, 4W, 10A Contacts
403-11X	480VAC, 4W, 60% to 80% Range
403-13X	120/208VAC, 4W, 0C to +90C
403-14X	575VAC, 3W, 400-500V Range
403-15X	120/208VAC, Sim. to 403-13X with Latching Circuit
403-16X	120/208VAC, Sim. to 403X with Conformal Coating

### AC THREE PHASE, CLOSE DIFFERENTIAL

D101-3X	Similar to D101X, -55C to +85C
D101-5X	120VAC, 50-500Hz, Military
D101-9X	120VAC, 50-500Hz, 0.5 Sec. T.D.
D101-11X	120VAC, 50-500Hz, 120-150VAC Adjust, N.C. Cont.
D101-12X	120VAC, Similar to D101X but 60-120VAC Range
D101-13X	120VAC, Similar to D101X but 3 N.C. Contacts
D101-14X	208VAC, Similar to D101-6X but 3 N.C. Contacts
D101-15X	480VAC, 50-500Hz, Spike Suppressors
D101-16X	480VAC, Similar to D101-7X but 3 N.C. Contacts
D101-17X	120VAC, 0.4A 120VDC Contact, -20 to +85 deg C
D101-18X	120VAC, Similar to D101X but Spike Suppression
D101-19X	208VAC, Similar to D101-6X but Spike Suppression
D101-20X	240VAC, Similar to D101-4X but Spike Suppression
D101-21X	380VAC, Similar to D101-10X but Spike Suppression
D101-24X	240VAC, 3 N.C. Contacts
D101-25X	208VAC, 3 N.C. Contacts, Spike Suppression
D101-26X	277VAC, 50-500Hz, 66-100% Adjustable
D101-27X	120VAC, Sim. to D101X, withstand 208V continuous
D101-29X	415VAC, 50-500Hz
D101-30X	380VAC, 50-500Hz, 3 N.C. Contacts
D101-31X	525VAC, Spike Suppression
D101-32X	120VAC, 50-500Hz, 5 Sec T.D.

### DC

400DCX	120VDC, 85-120V Range
400DC-HX	120VDC, 85-120V Range, 125VDC 2A Contacts
400DC-IX	28VDC, 15-29V Range
400DC-2X	240VDC, 180-220V Range
400DC-3X	62.5VDC, 40-65V Range
400DC-4X	305VDC, 200-300V Range
400DC-5X	5.6VDC, 4-6V Range, 120VAC Cont
410DCX	28VDC, 16—29V Range
410DC-SX	28VDC, 16-29V Range, Hi-Shock, MIL-R-57
410DC-1X	28VDC, 15-32V Range, 1.5V Differential
410DC-5X	24VDC, 16-29V Range, Suppression
410DCTDX	28VDC, 0.5-20 Sec. T.D.
411DCX	12VDC, 9-12 V Range
411DC-1X	15VDC, 11-15V Range
411DCTDX	12VDC, 0.5-20 Sec. T.D.
420DCX	60VDC, 40-65V Range

## Additional Relays (Continued)

420DC-4X	48VDC, 32-48V Range
420DC-5X	48VDC, 20-48V Range
420DC-6X	70VDC, 50-70V Range
420DC-8X	32VDC, 33-40V Range (Pick-Up)
420DC-9X	48VDC, Similar to 420DC-4X with 2 N.O. Contacts
420-470 SUFFIX	SUFFIX : "A" 2 N.O. Contacts "B" 2 N.C. Contacts
430DCX	120VDC, 85-120V Range
430DC-HX	120VDC, 85-120V Range, 125VDC 3A Contacts
430DC-1X	140VDC, 105-140V Range
430DC-2X	140VDC, 105-140V Range, 0.5 Sec. T.D., Suppression
430DC-3X	120VDC, 50-80V Range
430DC-4X	120VDC, 85-120V Range, 0.5 Sec. T.D., Set at 90V
430DC-5X	125VDC, 90-125V Range, Spike Suppression
430DC-6X	125VDC, 105-140V Range, 3.0-5.0 Sec. T.D.
430DC-7X	170VDC, 120-170V Range
430DC-8X	120VDC, 85-120V Range, 2 N.C. Contacts
430DC-9X	100VDC, 35-50V Range
430DC-10X	120VDC, 85-120V Range, 2 N.O. Contacts
440DCX	240VDC, 168-240V Range
440DC-HX	240VDC, 168-240V Range, 125VDC 3A Contacts
440DC-1X	280VDC, 190-260V Range
450DCX	305VDC, 230-305V Range
450DC-HX	305VDC, 230-305V Range, 125VDC 3A Contacts
450DC-1X	305VDC, 230-305V Range, 2 N.C. Contacts
460DCX	405VDC, 315-415V Range
460DC-HX	405VDC, 315-415V Range, 125VDC 3A Contacts
460DC-1X	405VDC, 300-330V Range
460DC-3X	405VDC, 300-425V Range
460DC-4X	432VDC, 275-325V Range
460DC-5X	470VDC, 300-425V Range
470DC	560VDC, 400-500V Range
470DC-1X	585VDC, 400-500V Range

### DC TIME DELAY

420DCTDX	48VDC, 32-48V Range, 0.5-20 Sec. T.D.
430DCTDX	125VDC, 83-125V Range, 0.5-20 Sec. T.D.
440DCTDX	250VDC, 166-250V Range, 0.5-20 Sec. T.D.

### OVER/UNDERVOLTAGE RELAYS

#### AC, SINGLE PHASE

250SX	120VAC, Hi-Shock
250-1X	120VAC, 72-120V, Mil, NSN 6125-00-091-0969
250-2X	120VAC, 1.2 Sec. Time Delay
250-3X	67VAC, UV 30-67V, OV 67-91V
250-4X	26VAC, 28VDC Control, Connector
250-5X	240VAC, Two N.C. Contacts
250-6X	240VAC, One N.O., One N.C. Contact
250-6HX	240VAC, 120VDC, 3A Contact
250-7X	120VAC, 3 Sec. Time Delay
250-8X	100VAC
250-10X	120VAC, Fast Trip, 25mS
250-11X	120VAC, Set at 97V and 156V

250-12X	120VAC, Sim. to 250X, MIL-R-5757 2A
250-14XAC	67VAC, Sim. to 250-3X with removable cover
250-17X	120VAC, Sim. to 250X plus suppression
250-19X	120VAC, Sim. to 250X with 2 N.O. Contacts
250-22X	240VAC, 1-2 Sec. TD on Drop Out
250-23X	120VAC, Sim. to 250X but -40C to +52C
250-27X	139VAC, Same as 250-12X except voltage
250-28X	138VAC, Same as 250-10X except voltage
250-29HX	120VAC, 50-400Hz., 125VDC 3A Contacts
250-30X	480VAC
250-31X	240VAC, Fast Trip 25mS
250-32HX	480VAC, 100Hz, 1Sec TD, 120V 3ADC Contacts
250-33HX	480VAC, 25Hz, 1 Sex TD, 120V 3ADC Contacts
250-34X	120VAC, 72-120-160V Range, Hi Shock
250-35X	230VAC, Sim. to 250-22X, 3.0 Sec. TD
250-36X	120VAC, 84-120-150V Range, Hi Shock, -40C to 70C
250-37HX	120VAC, 25 Hz, 1 Sec. TD, 120V 3ADC Contacts
250-38X	240VAC, Two N.O. Contacts
250-39X	120VAC, Similar to 250X, Range +/- 35%

#### AC, SINGLE PHASE, 50-400HZ

251SX	120/208VAC, Sim. to 251X with Hi Shock
251-1X	120/208VAC, 4W, 0.50 Sec. TD NSN 5895-00-139-0337
251-4X	139/240VAC, 4W

251-18X	120/208VAC, Highest/Lowest of three, TD Adjust 12VDC control
251-19X	120/208VAC, Highest/Lowest of three, TD Adjust 120VAC control
251-20X	120/208VAC, Highest/Lowest of three, TD Adjust, 24VDC Control
251-21X	120/208VAC, Sim. to 251X, 0.5Sec. TD
251-22X	115/200VAC, Sim. to 251X, 0.75Sec. TD
253-HX	230VAC, 3W, 48VDC 3A Contacts
253-1X	230VAC, 3W, Spike Suppression
253-1HX	230VAC, 3W, Spike Suppression, 125VDC Contacts
253-3X	230VAC, 3W, 1.0 Sec. TD
253-5X	230VAC, 3/4W, 2 N.C. Contacts, -51C to +71C
253-6X	230VAC, 3W, 3.0 Sec. TD
254-1X	415VAC, 3W, 290-415-519V
254-2X	220/380VAC, 4W, 2 N.C. Contacts
254-3X	416VAC, 3/4W, 2 N.C. Contacts, -51C to 71C
255-HX	460VAC, 3W, 125VDC 3A Contacts
255-1X	460VAC, 3/4W, Spike Suppression
255-2X	480VAC, 3W, High Shock
255-3X	495VAC, 3W, 3.0 Sec. TD

# 11

Protective Relays

## Additional Relays (Continued)

255-4X	460VAC, 3W, 2 N.O. Contacts, EMD # 9333490
255-5X	460VAC, 3W, Sim. to 255-4X, MIL-R-5757, 10A Relay
255-6X	460VAC, 3W, EMD# 9337151
255-7X	460VAC, 3W, Sim. to 255X, Fast operating, 40mSec.
255-8X	480VAC, 3W, 5.0 Sec. fixed TD, 120VAC Control
255-9X	480VAC, 3W, Sim. to 255-8X except +/- 10% Setting

### AC, SINGLE PHASE, 50-400HZ

256-1X	600VAC, 3W, 60Hz, 2 N.O. Contacts, EMD Canada
256-2X	575VAC, 3W, GM# 6964912 Rev. A

### DC

250DC-HX	24VDC, 16-24-30V Range, 48VDC 3A Contacts
250DC-1X	28VDC, MIL Shock and Vibration
250DC-2X	26VDC, UV 20-30V, OV 26-36V
250DC-3X	28VDC, 20-28-35V Range, Hi Shock, -40C to 70C
250DC-4X	14VDC, Commonwealth Edison
250DC-5X	28VDC, Commonwealth Edison
251DC-1X	48VDC, Removable Cover
251DC-2X	35VDC, UV 23-30V, OV 40-52V
251DC-3X	30VDC, UV 21-27V, OV 30-40V
251DC-HX	48VDC, 32-48-60V, 48VDC 3A Contacts
251DC-4X	60VDC, 45-60-75VDC, 2N.O. 120VAC Contacts
252DCX	120VDC, 85-120-150V Range
252DC-1X	130VDC, 80-130/120-150V Range
252DC-1HX	125VDC, 85-125/125-160V, 48VDC 3A Contacts
252DC-2X	130VDC, 80-130/120-150V, Removable Cover
253DCX	250VDC, 175-250-315VDC Range
253DC-HX	250VDC, 175-250-315VDC, 48VDC 3A Contacts

### REVERSE POWER RELAYS

#### AC, SINGLE PHASE

710-HX	120/220/266VAC, 125VDC 3A Control
710-PX	120/220/266VAC, 0.2-1.0A, Spike Suppression
710-1X	120/220/266VAC, 125VDC 1/4A Control
710-3X	120VAC (L-N), 1 Phase, 3-5A

#### 120/220/266VAC. SINGLE PHASE TIME DELAY

710TD-1X	0.05-0.25A, 0.5-10 Sec. T.D. with Knobs
710TD-5X	2 N.O. Contacts
710TD-7X	60Hz, Reverse Inductive
710TD-7PX	Similar to 710TD-7X with Suppression
710TD-8X	Similar to 710TDX with -55F to +150F
710TD-9X	Similar to 710TDX with Suppression
710TD-12X	Similar to 710TDX, 125VDC 2A Contacts
710TD-14X	50Hz, Reverse Inductive
720TD-14X	120 V, L-L, 50Hz, Reverse Inductive
721TD-14X	230 V, L-L, 50Hz, Reverse Inductive
722TD-14X	380 V, L-L, 50Hz, Reverse Inductive
723TD-14X	460 V, L-L, 50Hz, Reverse Inductive
724TD-14X	575 V, L-L, 50Hz, Reverse Inductive

725TD-14X	415 V, L-L, 50Hz, Reverse Inductive
726TD-14X	100 V, L-L, 50Hz, Reverse Inductive
727TD-14X	185 V, L-L, 50Hz, Reverse Inductive

### PHASE SEQUENCE RELAYS

#### AC, THREE PHASE

900-2PX	208-230VAC, Spike Suppression
900-4X	208VAC, 50/60 Hz
900-5X	120VAC, 50/60Hz
900-8X	120VAC, 60 Hz, 125VDC 2A Contacts
900-10X	120VAC, 60 Hz, Spike Suppression
901-1X	440VAC, 60 Hz, 5A Contacts
901-5X	575VAC, Porcelain Term., AZ Relay
901-6X	460VAC, 60 Hz, Spike Suppression
901-SX	440VAC, 55-65HZ, HI-Shock
910-1X	220/440VAC, 60 Hz, N.O. Contacts
910-2X	220/440VAC, 60 Hz, Reversed Contact Operation
910-3X	220/440VAC, 60 Hz, Porcelain Term., Sigma Relay
920X	380VAC, 50 Hz
920-1X	380VAC, 50 Hz, Mounting per 21-037
920-2X	380VAC, 50 Hz, Porcelain Terminals, Sigma Relay
920-3X	416VAC, 50 Hz, 5A Contacts
920-5X	220/380VAC, 50 Hz
920-6X	440VAC, 50 Hz
930X	208VAC, 400 Hz
930-1X	208VAC, 400Hz, 2A at 28VDC Contacts, Energized A-B-C, 5A
930-3X	400VAC, 400Hz
930-4X	400VAC, 2 N.C. Contacts, -51C to +71C
931X	120VAC, 400 Hz.
932-5X	115/200VAC, 400Hz, 2A Contact, Hi-Shock
932-7X	230/400VAC, 400Hz

### PHASE FAILURE RELAYS

980X	120VAC, 60 Hz, no T.D. on Starting
981X	230VAC, 60 Hz, no T.D. on Starting
982X	460VAC, 60 Hz, no T.D. on Starting
983X	380VAC, 60 Hz, no T.D. on Starting
984X	575VAC, 60 Hz, no T.D. on Starting
985X	525VAC, 60 Hz, no T.D. on Starting

1980X	120VAC, 60 Hz
1981X	230VAC, 60 Hz
1982X	460VAC, 60 Hz
1983X	380VAC, 50 Hz
1984X	575VAC, 60 Hz
1985X	525VAC, 60 Hz
1986X	415VAC, 50 Hz
1987X	380VAC, 60 Hz
SUFFIX:	"-S": Time Delay (0.5 - 30 Sec.)
	"-3S": Factory Set Time Delay (0-60 Sec.)
1981-1SX	230VAC, Similar to 1981X except 50 Hz
1980-2SX	120VAC, Similar to 1980X except N.C. Contacts

#### AC, THREE PHASE, VOLTAGE SENSITIVE

1003X-60HZ	380VAC, Similar to 1003X except 60Hz
1009X	415VAC, 50 Hz
1010X	208VAC, 50 Hz

**Additional Relays** (Continued)

1001X-1010X SUFFIX "-1": N.C. Contact (example: 1004-1X)  
 1001X-1010X SUFFIX "-2": -53C to +70C, 2% Drift below -20C  
 1001X-1010X SUFFIX "-3": 400Hz, N.O. Contacts  
 1001X-1010X SUFFIX "-T": Spike Suppression  
 1001X-1010X SUFFIX "-H": 125VDC 3A Contacts  
 1001X-1010X SUFFIX "-9" 1 N.O. & 1 N.C. Contacts  
 1001X-1010X SUFFIX "-12": Spike Supp., 125VDC 3A Contacts  
 1001X-1010X SUFFIX "-13": 1N.O + 1 N.C. 125VDC 3A Contacts

## MDR Series, 10 Amp Rotary Relay For Demanding Shock & Vibration Applications

### Product Facts

- AC and DC coils, latching and non-latching
- 4PDT through 24PDT contact arrangements
- Designed to withstand high impact shock per MIL-S-901

Small 8PDT

Medium 24PDT

### Specifications

#### Contact Data

**Arrangements** — 4 Form C (4PDT) through 24 Form C (24 PDT).

#### Contact Ratings

Single Contacts	Two Contacts in Series
10 A, 115 VAC	3 A, 440 VAC
3 A, 28 VDC	15 A, 115 VAC
0.8 A, 125 VDC	1.5 A, 125 VDC

The above AC contact ratings are based on contact loads having a 50% power factor. The DC contact ratings are based on resistive loads.

### Contact Section

### Operate Data @ 77°F [25°C]

Type	Typ. Operate Time (ms)	Typ. Release Time (ms)
Small AC Non-Latching	5 to 12	5 to 18
Small DC Non-Latching	15 to 30	5 to 15
Small AC Latching	6 to 12	N/A
Small DC Latching	10 to 16	N/A
Medium AC Non-Latching	6 to 12	6 to 20
Medium DC Non-Latching	65 to 90	10 to 30
Medium AC Latching	50 (max.)	N/A
Medium DC Latching	30 to 80	N/A

### Latching Two-Position Types —

Except for the latching feature, MDR latching relays utilize the same general construction as non-latching types. They have two sets of coils and provide a latching two-position operation.

Contacts Shown With Coil 1-2 De-Energized and Coil 3-4 Energized.

Coils Must be Energized Alternately, Not Simultaneously.

### Environmental Data

#### Temperature Range —

Standard models — 0°F to +149°F  
[0°C to +65°C]

Special order models — 0°F to +194°F  
[0°C to +90°C]

### Mechanical Data

**Termination** — #5-40 screw terminals supplied

#### Weight (Approx.) —

Small —  
4 & 8PDT — 32 oz. [0.914 kg];  
12PDT — 33 oz. [0.943 kg]  
Medium —  
16PDT — 72 oz. [2.04 kg];  
24PDT — 74 oz. [2.10 kg]

## MDR Series, 10 Amp Rotary Relay For Demanding Shock & Vibration Applications (Continued)

Ordering Information and Coil Characteristics — No models in this series are maintained in stock.

Type	Part Number	Contacts	Coil Voltage (60 Hz. for AC)	Coil Current (Amps)	DC Coil Resistance (Ohms)	Coil Power* (Watts)	Breakdown (Volts RMS)

### Outline Dimensions

Tolerances: Decimals ± .010 [±.25] Unless Otherwise Specified.

#### Small Models

Overall Height  
4PDT 3.13 [79.5] Max.  
8PDT 3.53 [89.7] Max.  
12PDT 3.88 [98.6] Max.

Coil and Contact Terminal Screws  
#5-40 Supplied.

#### Medium Models

Overall Height  
12PDT 4.63 [117.6] Max.  
16PDT 5.00 [127.0] Max.  
24PDT 5.75 [146.1] Max.

Coil and Contact Terminal Screws #5-40 Supplied.

## AGASTAT 2100 Series, Miniature Electropneumatic Timing Relay

### Product Facts

- High Repeat Accuracy over voltage and temperature extremes
- Hermetically sealed units are designed for high shock and vibration applications
- Instant recycling — easy linear adjustment
- Exclusive Dial Head adjustment — no needle valves
- Delay ranges from milliseconds to 3 minutes
- DPDT contacts

### Design & Construction

**Sealed patented timing head** — circulates air under controlled pressure through a variable orifice to provide adjustable timing. Circular-path Dial Head principle replaces traditional needle valve.

**Snap-action switch assembly** — provides sustained contact pressure during timing cycles. Specially designed over center mechanism assures flutter-free load transfer after extended delay periods.

**Precision-wound solenoid assembly** — supplies the basic motive force when the control circuit is closed. These assemblies are mounted in a rigid self-supporting framework within a steel enclosure. This rugged construction assures permanent alignment of all operating members, the key to this unit's

Users should thoroughly review the technical data before selecting a product part number. It is recommended that users also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

long trouble-free operation.

### Operation

**Series 2112 (On-Delay)** — Applying rated voltage to the solenoid coil starts the preset time delay. At the end of the delay period the NC contacts break and the NO contacts make. Contacts remain in this position until the coil is de-energized, when the switch instantaneously returns to its original position. De-energizing the coil, either during or after the delay period, will immediately (within 25 msec.) recycle the unit. It will then provide another full delay period on re-energization.

**Series 2122 (Off-Delay)** — Applying rated voltage to the coil for at least 75 msec. (for accurate timing) will instantaneously transfer the switch, breaking the NC contacts and making the NO contacts. Contacts remain in this position as long as the coil is energized. The preset time delay period begins as soon as the coil is de-energized, at the end of which the switch returns to its original position. **No power is required during the timing period.** Re-energizing the coil, either during or after the delay period, will immediately start a new cycle with full delay period.

**Operation** (Listed values at nom. voltage, 25°C unless noted)

### Operating Mode

**2112** — On-delay (delay on pull-in);

**2122** — Off-delay (delay on drop-out)

**Timing Adjustment** — All standard models offer easy linear adjustment over one of nine timing ranges listed below. For applications requiring frequent readjustment, the external knob model is recommended. For tamper-proof installation or where readjustment is infrequent, the internal key model may be preferred. This model requires removal of the cover plate for timing adjustment. Hermetically sealed models provide a slotted adjusting screw under the cap nut on the top cover.

### Timing Ranges

Code	Range
A	.03 to .1 sec.
B	.1 to .3 sec.
C	.15 to 1.0 sec.
D	.375 to 3.0 sec.
E	.75 to 10.0 sec.
F	1.0 to 30.0 sec.
G	2.0 to 60.0 sec.
H	5.0 to 120.0 sec.
J	5.0 to 180.0 sec.
K	1.5 to 30.0 cycles

L 3.0 to 120.0 cycles

### Repeat Accuracy

— NORMAL VERTICAL POSITION

±5% at 25°C; ±7% at 85°C; ±8% at -55°C.

The average time between -55°C and 85°C will be within ±20% of the average @ 25°C with a proportionally reduced effect at lesser extremes.

In extremely short delay settings an additional 8 msec. variation may result on AC models due to "half cycle" alternating current effect.

**Setting Tolerance** — Factory time setting, when specified, subject to additional +5% tolerance.

### Position Sensitivity

**HORIZONTAL POSITION** — Approximately 5% increase from the initial time in the vertical position.

**INVERTED POSITION** — Approximately 10% increase from the initial time in the vertical position.

**Reset Time** — 2112 Series: 25 msec.; 2122 Series: 75 msec.

**Relay Release Time** — 25 msec. (2112 Series)

**Relay Operate Time** — 75 msec. (2122 Series)

**Operating Voltage** — Coil Data

Code	Nominal Operating Voltage	Resistance Ohms ±10%
M	12VDC	30
N	28VDC	131
P	48VDC	500
R	110VDC	3200
S	120V 60 Hz	190 (2112 Series)
S	120V 60Hz	285 (2122 Series)
T	240V 60Hz	765
U	115V 400Hz	2600
Y	125VDC	3380

**Transients** — Insensitive to transients of ±1500 VAC for 10 milliseconds

**Dielectric** — 1000V RMS @ 60Hz between non-connected terminals.

**Contact Rating (DPDT Contacts)** —

	30V DC	110V DC	120V 60Hz	120V 400Hz	240V 60Hz
<b>Inductive (Amps)</b>	2	.75	3	2	1.5
<b>Resistive (Amps)</b>	10	1	10	10	5

Based on 100,000 operations electrical, 1,000,000 mechanical. Inductive and capacitive load should not have inrush currents that exceed five times normal operating load.

**Ambient Temperature Range** — -55°C to +85°C

**Weight** — Maximum, any unit - 17 ozs.

**Mounting/Terminals** — Chassis mounting tabs, octal plugs and external (-4) or internal (-5) adjustment. Panel mounting back plate, internal adjustment, and solder hook terminals (-9).

These are minimum standards; where more severe environmental conditions must be met, please consult the factory.

## AGASTAT 7000 Series, Industrial Electropneumatic Timing Relay

### Product Facts

- Available in on-delay, true off-delay, and on/off-delay
- Timing from 0.1 seconds to 60 minutes, in linear increments
- Oversize adjustment knobs, serrated with high-resolution markings visible from all angles makes the timer easy to set timers
- Inherent transient immunity
- Standard voltages from 6-550VAC and 12-550VDC (special voltages available)
- Available in 2-pole or 4-pole models
- Numerous enclosure options — explosion proof, dust tight, watertight, hermetically-sealed, NEMA 1
- Auxiliary timed and instantaneous switches can be added for greater switching flexibility
- Many mounting options — Surface mount, Panel mount
- Options: quick-connect terminals, dial stops, and transient protection module
- Easy-to-reach screw terminals, all on the face of the unit, clearly identified
- Modular assembly — timing head, coil assembly and switchblock are all individual modules, with switches field-replaceable
- File E15631, File LR29186

### Design & Construction

There are three main components of Series 7000 Timing Relays:

**Timing Head** circulates air through a variable length to provide linearly adjustable timing. Patented design provides easy adjustment and long service life under severe operating conditions.

#### Precision-Wound Potted Coil

Total sealing without external leads eliminates moisture problems, gives maximum insulation value.

#### Snap-Action Switch Assembly

— custom-designed over-center mechanism provides snap action. Standard switches are DPDT arrangement.

Each of these subassemblies forms self-contained modules assembled at the factory with the other two to afford a wide choice of operating types, coil voltages, and timing ranges.

The squared design with front terminals and rear mounting permits the grouping of Series 7000 units side-by-side in minimum panel space. Auxiliary switches may be added in the base of the unit, without affecting the overall width or depth.

### Operation

Two basic operating types are available.

“On-Delay” models provide a delay period on energization, at the end of which the switch transfers the load from one set of contacts to another. De-energizing the unit during the delay period immediately recycles the unit, readying it for another full delay period on re-energization.

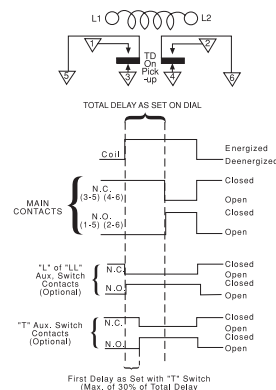

In “Off-Delay” models the switch transfers the load immediately upon energization and the delay period does not begin until the unit is de-energized. At the end of the delay period the switch returns to its original position. Re-energizing the unit during the delay period immediately resets the timing, readying it for another full delay period on de-energization.

No power is required during the timing period, providing a true off delay.

In addition to these basic operating types, “Double-Head” models offer sequential delays on pull-in and drop-out in one unit. With the addition of auxiliary switches the basic models provide two-step timing.

**Note: Seismic & radiation tested E7000 models are available. Consult factory for detailed information.**

### On-delay model 7012 (delay on pickup)

Applying voltage to the coil (L1-L2) for at least 50 msec starts a time delay lasting for the preset time. During this period the normally closed contacts (3-5 and 4-6) remain closed. At the end of the delay period the normally closed contacts break and the normally open contacts (1-5 and 2-6) make. The contacts remain in this transferred position until the coil is deenergized, at which time the switch returns to its original position.

De-energizing the coil, either during or after the delay period, will recycle the unit within 50 msec.

It will then provide a full delay period upon re-energization, regardless of how often the coil voltage is interrupted before the unit has been permitted to “time-out” to its full delay setting.

### Off-delay model 7022 (delay on dropout)

Applying voltage to the coil (for at least 50 msec) will transfer the switch, breaking the normally closed contacts (1-5 and 2-6), and making the normally open contacts (3-5 and 4-6). Contacts remain in this transferred position as long as the coil is energized. The time delay begins immediately upon de-energization. At the end of the delay period the switch returns to its normal position.

Re-energizing the coil during the delay period will immediately return the timing mechanism to a point where it will provide a full delay period upon subsequent de-energization. The switch remains in the transferred position.

**Note:** 7032 types and certain models with accessories are not agency approved. Users should thoroughly review the technical data before selecting a product part number. It is recommended that users also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application. Consult factory for ordering information.

**AGASTAT 7000 Series, Industrial Electropneumatic Timing Relay (Continued)**

**Auxiliary Switch Options**

To increase the versatility of the basic timer models, auxiliary switches may be added to either on-delay or off-delay types. They switch additional circuits, provide two-step timing action, or furnish electrical interlock for sustained coil energization from a momentary impulse, depending on the type selected and its adjustment. They are installed at the factory. All auxiliary switches are SPDT with UL listings of 10A @ 125, 250, or 480 VAC. A maximum of one Code T or two Code L auxiliary switches may be added to each relay. The L or LL switch is available with on-delay relays only. The T switch is available with both the on-delay and off-delay relays.

**Auxiliary Switch Options for On-Delay**

**Instant Transfer (Auxiliary Switch Code L, maximum of 2 per relay.)**

1. Energizing coil begins time delay and transfers auxiliary switch.
2. Main switch transfers after total preset delay.
3. De-energizing coil resets both switches instantly.

Auxiliary switch is nonadjustable.

**Two-Step Timing (Auxiliary Switch Code T, maximum of 1 per relay.)**

1. Energizing coil begins time delay.
2. After first delay auxiliary switch transfers.
3. Main switch transfers after total preset delay.

4. De-energizing coil resets both switches instantly. First delay is independently adjustable, up to 30% of overall delay. (Recommended maximum 100 seconds.)

**Auxiliary Switch Options for Off-Delay**

In these models the same auxiliary switch provides either two-step timing or instant transfer action, depending on the adjustment of the actuator.

**Two-Step Timing (Auxiliary Switch Code T, maximum of 1 per relay.)**

1. Energizing coil transfers main and auxiliary switches instantly.
2. De-energizing coil begins time delay.
3. After first delay auxiliary switch transfers.

4. Main switch transfers after total preset delay. First delay is independently adjustable, up to 30% of overall delay. (Recommended maximum 100 seconds.)

**Instant Transfer (Auxiliary Switch Code L, maximum of 1 per relay.)**

1. Energizing coil transfers main and auxiliary switches instantly.
2. De-energizing coil resets auxiliary switch and begins time delay.
3. Main switch transfers after total preset delay.

Auxiliary switch is factory adjusted to give instant transfer operation. Two-step timing may be set at the factory to customer specification up to a 3:2 ratio.

**On-delay, Off-delay Model 7032 (Double Head)**

The Double Head model provides delayed switch transfer on energization of its coil, and delayed resetting upon coil de-energization. Each delay period is independently adjustable.

In new circuit designs or the improvement of existing controls now using two or more conventional timers, the Double Head unit offers distinct advantages.

Its compact design saves panel space, while the simplified wiring reduces costly interconnection.

**On-delay Model 7014, Off-delay Model 7024**

With the addition of an extra switch block at the bottom of the basic unit, this version of the Series 7000 offers four pole switch capacity with simultaneous timing or two-step timing. The two-step operation is achieved by factory adjustment to your specifications.

For two-step operation, a maximum timing ratio between upper and lower switches of 3:2 is recommended. Once adjusted at the factory, this ratio remains constant regardless of changes in dial settings. (Ex: If upper switch transfer is set on dial at 60 sec., minimum time on lower switch should be 40 sec.)

This Series 7000 unit offers many of the performance features found in basic models — voltage ranges, timing and switch capacities.

Four pole models add approximately 1-1/4" to the maximum height of the basic model, approximately 1/8" to the depth. They are designed for vertical operation only.

**AGASTAT 7000 Series, Industrial Electropneumatic Timing Relay** (Continued)

**Surge/Transient Protection Option**

Transient Suppressor  
Option "V"

**Product Facts**

- **Protect electronic control circuits from voltage transients generated by the timer coil**
- **Fast response to the rapidly rising back E.M.F.**
- **High performance clamping voltage characteristics**
- **UL recognized, (except varistor and coil together).**
- **Timer NOT polarity sensitive**

The Surge/Transient Protection Option protects electronic control circuits from transients and surges which are generated when the timer coil is activated. The device is not polarity sensitive and permits the user to initiate, delay, sequence and program equipment actions over a wide range of applications under the most severe operating conditions. The varistor will not affect the operating characteristics of the 7000 Timer. The varistor has bilateral and symmetrical voltage and current characteristics.

**Timing Specifications** (All values shown are at nominal voltage and 25°C unless otherwise specified)

**Operating Modes —**

Model 7012/7014 — On-delay (delay on pick-up).  
 Model 7022/7024 — Off-delay (delay on drop-out).  
 Model 7032 — On-delay, off-delay (double head).

**Timing Adjustment —** Timing is set by simply turning the dial to the desired time value. In the zone of approximately 25° separating the high and low end of timing ranges A,D,E, and K, instantaneous operation (no time delay) will occur. All other ranges produce an infinite time delay when the dial is set in this zone.

Models 7014 and 7032 are available with letter dials only. The upper end of the time ranges in these models may be twice the values shown.

**Linear Timing Ranges —**

Code	Models 7012, 7022, 7024	Models 7014, 7032
A	.1 to 1 Sec.	.2 to 2 Sec.
B	.5 to 5 Sec.	.7 to 7 Sec.
C	1.5 to 15 Sec	2 to 20 Sec.
D	5 to 50 Sec.	10 to 100 Sec.
E	20 to 200 Sec.	30 to 300 Sec.
F	1 to 10 Min.	1.5 to 15 Min.
H	3 to 30 Min.	3 to 30 Min.
I	6 to 60 Min.	Not Avail.
J	3 to 120 Cyc.	Not Avail.
K	1 to 300 Sec.	Not Avail.

**Repeat Accuracy —**

For delays of 200 seconds or less:	7012*, 7022, 7024:	±5%
	7014*:	±10%
	7032:	±15%
For delays greater than 200 seconds:	7012*, 7022, 7014*, 7024:	±10%
	7032:	±15%

\* The first time delay afforded by Model 7012 with H (3 to 30 min.) and I (6 to 60 min.) time ranges or Model 7014 with H time range will be approx. 15% longer than subsequent delays due to coil temperature rise.

**Reset Time —** 50 msec. (except model 7032)

**Relay Release Time —** 50 msec. for on-delay models (7012/7014)

**Relay Operate Time —** 50 msec. for off-delay models (7022/7024)

**Operating Voltage Coil Data (for DPDT)**

Coil Part #	Code Letter	Rated Voltage	Operating* Voltage Range @ 60Hz	Rated Voltage	Operating Voltage Range @ 50Hz	
7000	A	120	102-132	110	93.5-121

		V	32	25.8-35.2		
W		96	76.8-105.6			
Y		6	4.8-6.6			
Z		220	176-242			
X			Special DC Coils (X1, X2, etc.)			

\*Four pole Models: Operational voltage range 90% to 110% for AC units; 85% to 110% for DC units.

See next page for more coil data.

**AGASTAT 7000 Series, Industrial Electropneumatic Timing Relay** (Continued)

**Timing Specifications** (All values shown are at nominal voltage and 25°C unless otherwise specified)

Minimum operating voltages are based on vertically mounted 7012 units. 7012 horizontally mounted or 7022 vertically or horizontally mounted units will operate satisfactorily at minimum voltages approximately 5% lower than those listed.

AC units drop out at approximately 50% of rated voltage. DC units drop out at approximately 10% of rated voltage.

All units may be operated on intermittent duty cycles at voltages 10% above the listed maximums (intermittent duty - maximum 50% duty cycle and 30 minutes "on" time.)

**Surge/Transient Protection Option Characteristics (DC Timers Only)**

Coil Voltage Nominal (DC)	Max Excess Energy Capacity (Joule)	Max De-energization Transient Voltage
12 V	0.4 J	48 V
24 V	1.8 J	93 V
28 V	1.8 J	93 V
32 V	2.5 J	135 V
48 V	3.57 J	145 V
60 V	6 J	250 V
96 V	10 J	340 V
110 V	10 J	340 V
125 V	10 J	340 V
220 V	17 J	366 V
250 V	17 J	366 V

**Surge Life** —

Applied 100,000 times continuously with the interval of 10 seconds at room temperature. Below 68 VAC: 12A; Above 68 VAC: 35A

**Temperature Range** —

Operating — -22°F to +167°F (-30°C to + 75°C)

Storage — -40°F to +167°F (-40°C to +75°C)

**Output/Life Contact Ratings** — Contact Capacity in Amps (Resistive Load)

Contact Voltage	Min. 100,000 Operations	Min. 1,000,000 Operations
30 VDC	15.0	7.0
110 VDC	1.0	0.5
120 V 60Hz	20.0	15.0
240 V 60Hz	20.0	15.0
480 V 60Hz	12.0	10.0

10 Amps Resistive, 240 VAC

1/4 Horsepower, 120 VAC/240VAC (per pole)

15 Amps 30 VDC (per pole)

5 Amps, General Purpose, 600VAC (per pole)

**Dielectric** — Withstands 1500 volts RMS 60Hz between terminals and ground. 1,000 volts RMS 60 Hz between non-connected terminals. For dielectric specification on hermetically sealed models consult factory.

**Insulation Resistance** — 500 Megohms with 500VDC applied.

**Temperature Range** —

Operating — -20°F to +165°F (-29°C to 74°C)

Storage — -67°F to +165°F (-55°C to 74°C)

**Temperature Variation** — Using a fixed time delay which was set and measured when the ambient temperature was 77°F (25°C), the maximum observed shift in the average of three consecutive time delays was -20% at -20°F (-29°C) and +20% at 165°F (74°C).

**Mounting/Terminals** — Normal mounting of the basic unit is in a vertical position, from the back of the panel. **All units are tested for vertical operation.** Basic models (7012, 7022) may also be horizontally mounted, and will be adjusted accordingly **when Accessory Y1 is specified in your order.**

Standard screw terminals (8-32 truss head screws supplied) are located on the front of the unit, with permanent schematic markings. Barrier isolation is designed to accommodate spade or ring tongue terminals, with spacing to meet all industrial control specifications.

The basic Series 7000 may also be panel mounted with the addition of a panel mount kit, X option, that includes all necessary hardware and faceplate. This offers the convenience of "out-front" adjustment, with large dial skirt knob. The faceplate and knob blend with advanced equipment and console designs, while the body of the unit and its wiring are protected behind the panel.

Other mounting options include plug-in styles and special configurations to meet unusual installation requirements. Contact factory for details.

**Power Consumption** — Approximately 8 watts power at rated voltage .

**Approximate Weights** —

Models 7012, 7022	2 lbs. 4 ozs.
7014, 7024	2 lbs. 10 ozs.
7032	3 lbs. 5 ozs.

Weight may vary slightly with coil voltage.

**V – Transient/Surge Protection**

**X – Panelmount Kit**

Mounting hardware included.

## AGASTAT E7000 Series, Nuclear Qualified Time Delay Relays

### Seismic and Radiation Tested

In order to satisfy the growing need for electrical control components suitable for class 1E service in nuclear power generating stations, AGASTAT timing relays have been tested for three applications. These E7000 Series electropneumatic devices have demonstrated compliance with the requirements of IEEE Standards 323-1974 (Standard for

Qualifying Class 1E Equipment for Nuclear Power Generating Stations) and IEEE Standard 344-1975 (Seismic Qualifications for Nuclear Power Generating Stations). Testing was also referenced to ANSI/IEEE Standard 501-1978, Standard for Seismic Testing of Relays).

The present E7000 Series design has evolved over 40 years of continual field use in a wider range of industrial applications. On-Delay, Off-Delay and Four-Pole versions are available for use with a choice of 23 coil voltages, as well as time delay adjustment to as long as 60 minutes.

### Test Procedure

#### Test Procedure

AGASTAT timing relay Models E7012, E7022, E7014 and E7024 were tested in accordance with the requirements of IEEE STD. 323-1974 (Standard for Qualifying Class 1E Equipment for Nuclear Power Generating Stations), IEEE STD. 344-1975 (Seismic Qualification for Nuclear Power Generating Stations) and referenced to ANSI/IEEE C37.98 (formerly IEEE Standard 501-1978, Standard for Seismic Testing of Relays). The relays were tested according to parameters which in practice, should encompass the majority of applications. Documented data applies to timing relays which were mounted on rigid test fixtures. The following descriptions of the tests performed are presented in their actual sequence.

#### Baseline Performance

In addition to aging tests, a series of baseline tests were conducted before, and immediately after each aging sequence:

- Pull-in Voltage
- Drop-out Voltage
- Dielectric Strength at 1650V 60Hz
- Insulation Resistance

The SRS shape (at 5 percent damping), is defined by four points:

- point A = 1.0 Hz and an acceleration equal to 25 percent of the Zero Period Acceleration
- point D = 4.0 Hz and 250 percent of the ZPA
- point E = 16.0 Hz and 250 percent of the ZPA
- point G = 33.0 Hz and a level equal to the ZPA

SPECIMEN 1 & 3 (E7012 SERIES)

RELAY STATE: TRANSITIONAL MODE (TD X 2)

AXIS (H + V):

TEST RUN NO. 41, 45, 60, 63

COMPOSITE OF FB/V-, SS/V-, SS/V+, FB/V+ X .707

DUE TO 45° INCLINATION OF TEST MACHINE.

- Operate Time (milliseconds)
- Recycle Time (milliseconds)
- Time Delay (seconds)
- Repeatability (percent)
- Contact Bounce (milliseconds at 28VDC, 1 amp)
- Contact Resistance (milliohms at 28VDC, 1 amp)

Data was measured and recorded and used for comparison throughout the qualification test program in order to detect any degradation of performance.

#### Radiation Aging

Relays were subjected to a radiation dosage of  $2.0 \times 10^5$  Rads, which is considered to exceed adverse plant operating requirements for such areas as auxiliary and control buildings.

#### Cycling with Load Aging

The radiated units were then subjected to 27,500 operations at accelerated rate, with one set of contacts loaded to 120VAC, 60Hz at 10 amps; or 125VDC at 1 amp, and the number of mechanical operations exceeding those experienced in actual service.

#### Temperature Aging

This test subjected the relays to a temperature of 100°C for 42 days, with performance measured before and after thermal stress.

#### Seismic Aging

Sufficient interactions were performed at levels less than the fragility levels of the devices in order to satisfy the seismic aging requirements of IEEE STD 323-1974 and IEEE STD 344-1975.

#### Seismic Qualification

Artificially aged relays were subjected to simulated seismic vibration, which verified the ability of the individual device to perform its required function before, during and/or following design basis earthquakes. Relays were tested in the non-operating, operating and transitional modes.

#### Hostile Environment

Since the timing relays are intended for use in auxiliary and control buildings, and not in the reactor containment areas, a hostile environment test was performed in place of the Loss of Coolant Accident (LOCA) test. Relays were subjected to combination extreme temperature/humidity plus under/over voltage testing to prove their ability to function under adverse conditions even after having undergone all the previous aging simulation and seismic testing. The devices were operated at minimum and maximum voltage extremes: 85 and 120 percent of rated voltage for AC units, and 80 and 120 percent of rated voltage for DC units, with temperatures ranging from 40°F to 172°F at 95 percent relative humidity.

## AGASTAT E7000 Series, Nuclear Qualified Time Delay Relays (Continued)

### Operation

Two basic operating types are available: **On-delay** models provide a delay period on energization, at the end of which the switch transfers the load from one set of contacts to another. Deenergizing the unit during the delay period immediately recycles the unit, readying it for another full delay period on reenergization.

In **off-delay** models the switch transfers the load immediately upon energization, and the delay period does not begin until the unit is deenergized. At the end of the delay period the switch returns to its original position. Reenergizing the unit during the delay period immediately resets the timing, readying it for another full delay period on deenergization. No power is required during the timing period.

### On-Delay Models, E7012

(Delay on pick-up)

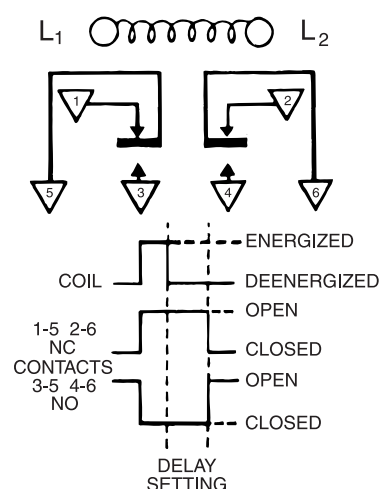

Applying for at least 50 msec voltage to the coil (L1-L2) starts a time delay lasting for the preset time. During this period the normally closed contacts (3-5 and 4-6) remain closed. At the end of the delay period the normally closed contacts break and the normally open contacts (1-5 and 2-6) make. The contacts remain in this transferred position until the coil is deenergized, at which time the switch instantaneously returns to its original position.

Deenergizing the coil, either during or after the delay period, will recycle the unit within .050 second. It will then provide a full delay period upon reenergization, regardless of how often the coil voltage is interrupted before the unit has been permitted to "time-out" to its full delay setting.

### Off-Delay Models, E7022

(Delay on drop-out)

Applying voltage to the coil (for at least .050 second) will instantaneously transfer the switch, breaking the normally closed contacts (1-5 and 2-6), and making the normally open contacts (3-5 and 4-6). Contacts remain in this transferred position as long as the coil is energized. The time delay begins immediately upon deenergization. At the end of the delay period the switch returns to its normal position.

Reenergizing the coil during the delay period will immediately return the timing mechanism to a point where it will provide a full delay period upon subsequent deenergization. The switch remains in the transferred position.

### Four Pole Models, E7014, E7024

With the addition of an extra switch block at the bottom of the basic units, this version of the E7000 Series offers four pole switch capacity with simultaneous timing or two-step timing. The two-step operation is achieved by factory adjustment to your specifications.

**AGASTAT E7000 Series, Nuclear Qualified Time Delay Relays** (Continued)

**Time Delay Information**

All units are furnished with dials in linear increments covering the range selected. (See "Catalog Number Code"). In addition, ranges B through K provide non-linear adjustment from .2 second to the beginning of the linear zone.

**Repeat Accuracy**

Repeat accuracy at any fixed temperature is defined as:

\*The repeat accuracy deviation ( $A_R$ ) of a time-delay relay is a measure of the maximum deviation in the time-delay that will be experienced in successive operations at any particular time setting of the relay and for any particular operating voltage or current.

Repeat accuracy is obtained from the following formula:

$$A_R = \pm 100 \frac{(T_1 - T_2)}{(T_1 + T_2)}$$

Where —

$T_1$  = Maximum time delay.

$T_2$  = Minimum time delay.

\*NEMA part ICS 2-218.02

Repeat accuracy at any fixed temperature is  $\pm 10\%$  of setting.

The first time delay afforded by units with H (3 to 30 minutes) and I (6 to 60 minutes) time ranges may be up to 15% longer than subsequent delays, due to coil temperature rise.

Dial position error is not included in the repeat accuracy specification above.

**Delay Setting**

Dial graduations are provided to minimize the time required to set the unit to a specific delay. Rotate the dial clockwise to increase the delay; counter-clockwise to decrease it.

The following procedure is recommended if the unit must be set to a very precise delay value:

1. Set dial to desired time delay. (On letter-graduated units, this requires an approximation of a percentage value between the arrowhead "▼" on the dial, which provides minimum time, and the letter "E," which provides maximum time.)
2. Record as many time delays as required to establish a stable average.
3. If the recorded average delay is shorter than the desired time, turn dial slightly clockwise; if it is longer, turn dial counter-clockwise.
4. Repeat step 2 after each adjustment, until required delay is recorded.

Because of the variety of environments in which time delay relays are applied, we recommend a re-check of the time delay after approximately three hours of operation. If any change from the initial time setting is apparent, the relay should be reset to the desired delay. The time delay accuracy should then be monitored on a monthly basis for several months, and if no substantial change in time delay has taken place, the frequency of checking may be reduced. It is recommended that this procedure be incorporated in the Operating Instructions for your equipment.

**Contact Ratings — Nuclear**

Resistive at 125 VDC. . . . . 1.0 Amp  
Resistive at 120 VAC 60 Hz. . . 10.0 Amp

**Contact Ratings — Non-Nuclear**

Contact Capacity in Amps  
(Resistive Loads)

Contact Voltage	Min. 100,000 Operations
30VDC	15.0
110VDC	1.0
120V 60Hz	20.0
240V 60 Hz	20.0
480V 60 Hz	12.0

Four pole models add approximately 1-1/4" to the maximum height of the basic model, approximately 1/8" to the depth. They are designed for vertical operation only.

**Timing Adjustment**

The AGASTAT E7000 Series is the first electropneumatic timer to offer the ease of adjustment and resetting of a graduated dial head. Discrete ranges covering a total span from .1 second to 60 minutes are available. (See table on page 12-20.) Each has its own graduated, clearly identified dial. Timing is set by simply turning the dial to the desired time value. In the zone of approximately 25° separating the high and low ends of timing ranges A, D, E, and K, instantaneous operation (no time delay) will occur. All other ranges produce an infinite time delay when the dial is set in this zone.

**AGASTAT E7000 Series, Nuclear Qualified Time Delay Relays** (Continued)

**Environmental Characteristics (Qualified Life) Parameter**

**Temperature** —  
 Minimum — 40°F  
 Normal — 70°F - 104°F  
 Maximum — 156°F  
**Humidity (R.H. %)** —  
 Minimum — 10%  
 Normal — 40-60%  
 Maximum — 95%  
**Pressure** — Atmospheric  
**Radiation (rads)** —  
 2.0 X 10<sup>5</sup> Gamma max.

**Operating Conditions (Normal Environment)**

**Coil Operating Voltage, Nominal (Rated)** —  
 Pull-in (% of rated value) —  
 80% min. with DC; 85% min. with AC coils  
 Drop-out (% of rated value) —  
 10% approx. with DC coils;  
 50% approx. with AC coils  
 Power (Watts at rated value) —  
 8 approx. with DC or AC coils  
**Relay Operate Time** —  
 Model E7012 — N/A  
 Model E7022 — 50 ms. max. with DC or AC coils

**Relay Release (Recycle) Time** —  
 Model E7012 — 50 ms max. with DC or AC coils  
 Model E7022 — N/A

**Contact Ratings, Continuous** —  
 (Resistive at 125 Vdc) —  
 1.0 amp with DC or AC coils  
 (Resistive at 120 Vac, 60 Hz) —  
 10.0 amp with DC or AC coils

**Insulation Resistance (In megohms at 500 Vdc)** —  
 500 min. with DC or AC coils

**Dielectric (Vrms, 60 Hz)** —  
 Between Terminals and Ground —  
 1,500 with DC or AC coils  
 Between Non-connected Terminals — 1,000 with DC or AC coils

**Repeat Accuracy** — ±10% with DC or AC coils

**Operating Conditions (Abnormal Environment)**

Adverse Operating Specifications	Normal	DBE "A"	DBE "B"	DBE "C"	DBE "D"
Temperature (°F)	70-104	40	120	145	156
Humidity (R.H. %)	40-60	10-95	10-95	10-95	10-95
Coil Operating Voltage * (% of Rated)					
Model E7012 (AC)	85-110	85-110	85-110	85-110	85-110
(DC)	80-110	80-110	80-110	90-110	90-110
Model E7022 (AC)	85-110	85-110	85-110	85-110	85-110
(DC)	80-110	80-110	80-110	80-110	80-110

\*All coils may be operated on intermittent duty cycles at voltages 10% above listed maximums (Intermittent Duty = Maximum 50% duty cycle and 30 minutes "ON" time.)

**REPLACEMENT SCHEDULE**  
 The qualified life of this unit is **25,000 operations or 10 years from the date of manufacture, whichever occurs first.**

**Contact ratings as listed under the UL Component Recognition Program for 100,000 operations (Per pole)** —

10 Amps, resistive, 240 VAC;  
 1/4 horsepower, 120 VAC/240 VAC;  
 15 Amps, 30 VDC;  
 5 Amps, General Purpose, 600 VAC

**Coil Data** —

All units draw approximately 8 watts power at rated voltage.  
 The operating voltage range for AC relays is 85 to 110 percent of nominal rated value.  
 AC units drop-out at approximately 50% of rated voltage.  
 The operating range of DC relays is 80 to 110 percent of nominal rated value.  
 DC units drop-out at approximately 10% of rated voltage.  
 All units may be operated on intermittent duty cycles (50% on/off, maximum 30 minutes on) at voltages 10% above the listed maximums.

**Approximate Weight** —

Model E7012 and E7022 with AC Coils — 2.13 lbs.  
 Model E7012 and E7022 with DC Coils — 2.25 lbs.  
 Model E7014 and E7024 with AC Coils — 2.43 lbs.  
 Model E7014 and E7024 with DC Coils — 2.57 lbs.  
 (Weight may vary slightly with particular coil voltage.)

**Terminals** —

Standard screw terminals (#8 – 32 truss head screws supplied) are located on the front of the unit, with permanent schematic markings. Barrier isolation is designed to accommodate spade or ring-tongue terminals with spacing to meet industrial control specifications.

**Note:** TE Connectivity Corporation cannot recommend the use of its products in the containment areas of Nuclear Power Generating Stations.

The date of manufacture can be found in the first four (4) digits of the serial number on the nameplate:

**Example:** Date code 8014: 80 indicates 1980; 14 indicates the week of April 2 through 8.

## AGASTAT EGP/EML/ETR Series, Nuclear Qualified Control Relays

### Seismic and Radiation Tested

In order to satisfy the need for electrical control components suitable for class 1E service in nuclear power generating stations, AGASTAT control relays have been tested for these applications. Series EGP, EML and ETR have demonstrated compliance with the requirements of IEEE Standards 323-1974 (Standard for

qualifying Class 1E Equipment for Nuclear Power Generating Stations) and IEEE Standard 344-1975 (Seismic Qualification for Nuclear Power Generating Stations). Testing was also referenced to ANSI/IEEE C37.98 (formerly IEEE Standard 501-1978, Standard for Seismic Testing of Relays).

The design of Series EGP, EML and ETR control relays has evolved over 20 years of continual use in a wide range of industrial applications. Control Relay, Magnetic Latch and Timing Relay versions are available for use with a choice of coil voltages, as well as an internal fixed or adjustable potentiometer in the Series ETR time delay version.

### Test Procedure

#### Test Procedure

AGASTAT control relay Series EGP, EML and ETR were tested in accordance with the requirements of IEEE STD. 323-1974 (Standard for Qualifying Class 1E Equipment for Nuclear Power Generating Stations), IEEE STD. 344-1975 (Seismic Qualification for Nuclear Power Generating Stations) and referenced to ANSI/IEEE C37.98 (formerly IEEE Standard 501-1978, Standard for Seismic Testing of Relays). The relays were tested according to parameters which in practice, should encompass the majority of applications. Documented data applies to relays which were mounted on rigid test fixtures. The following descriptions of the tests performed are presented in their actual sequence.

#### Baseline Performance

In addition to aging tests, a series of baseline tests were conducted before, and immediately after each aging sequence:

- Pull-in Voltage
- Drop-out Voltage
- Dielectric Strength at 1650V 60Hz
- Insulation Resistance
- Operate Time (milliseconds)

The SRS shape (at 5 percent damping), is defined by four points:  
 point A = 1.0 Hz and an acceleration equal to 25 percent of the Zero Period Acceleration (ZPA)  
 point D = 4.0 Hz and 250 percent of the ZPA  
 point E = 16.0 Hz and 250 percent of the ZPA  
 point G = 33.0 Hz and a level equal to the ZPA

- Contact Bounce  
(milliseconds at 28VDC, 1 amp)
- Contact Resistance  
(milliohms at 28VDC, 1 amp)

Data was measured and recorded and used for comparison throughout the qualification test program in order to detect any degradation of performance.

#### Radiation Aging

Relays were subjected to a radiation dosage of  $2.0 \times 10^5$  Rads, which is considered to exceed adverse plant operating requirements for such areas as auxiliary and control buildings.

#### Cycling with Load Aging

The radiated units were then subjected to 27,500 operations at accelerated rate, with one set of contacts loaded to 120VAC, 60Hz at 10 amps; or 125VDC at 1 amp, and the number of mechanical operations exceeding those experienced in actual service.

#### Temperature Aging

This test subjected the relays to a temperature of 100°C for 42 days, with performance measured before and after thermal stress.

#### Seismic Aging

Sufficient interactions were performed at levels less than the fragility levels of the devices in order to satisfy the seismic aging requirements of IEEE STD 323-1974 and IEEE STD 344-1975.

#### Seismic Qualification

Artificially aged relays were subjected to simulated seismic vibration, which verified the ability of the individual device to perform its required function before, during and/or following design basis earthquakes. Relays were tested in the non-operating, operating and transitional modes.

#### Hostile Environment

Since the timing relays are intended for use in auxiliary and control buildings, and not in the reactor containment areas, a hostile environment test was performed in place of the Loss of Coolant Accident (LOCA) test. Relays were subjected to combination extreme temperature/humidity plus under/over voltage testing to prove their ability to function under adverse conditions even after having undergone all the previous aging simulation and seismic testing. The devices were operated at minimum and maximum voltage extremes: 85 and 120 percent of rated voltage for AC units, and 80 and 120 percent of rated voltage for DC units, with temperatures ranging from 40°F to 172°F at 95 percent relative humidity.

Figure 1. Model EGP, Response Spectrum, Non-Operate Mode

AGASTAT EGP/EML/ETR Series, Nuclear Qualified Control Relays (Continued)

Operation

Series EGP Power Relay

Applying a voltage to the coil (B1-B4) for more than 50 msec energizes the coil and instantaneously transfers the switch, breaking the normally closed contacts (M1-R1, M2-R2, M3-R3, M4-R4) and making the normally open contacts (M1-T1, M2-T2, M3-T3, M4-T4). The contacts remain in this transferred position until the coil is deenergized, at which time the switch instantaneously returns the contacts to their original position.

Series EML Magnetic Latch

Application of a voltage to the latching input (B1-B4) will cause the relay to latch in (Make the N.O. Contacts, break the N.C. Contacts). When this voltage is removed, the relay will remain in this "Latched" condition. Application of a voltage to the un-latching input (B3-B4) will cause the relay to drop out (Break the N.O. Contacts, make the N.C. Contacts). When this voltage is removed, the relay will remain in this "Unlatched" condition.

Wiring Diagram (Wiring and Connections)

The ML relay has three terminals for the windings: latching winding between terminals B1 and B4, un-latching winding between terminals B3 and B4.

The ML Relay is not symmetrical due to its three coil connections.

The relays are normally delivered polarized so that terminal B4 carries the negative voltage. To reverse the polarity, a deenergize/energize cycle should be carried out using a voltage 50% greater than the normal rating.

Continuous Duty Wiring

Since the double wound coil does not have a continuous duty rating, voltage pulses to the coils should not exceed a ratio of 40% on, to 60% off, with maximum power-on periods not to exceed 10 minutes.

If continuous energizing only is available, a resistor/capacitor network should be connected as shown below. In this case the shortest time between two operations must not be less than 5 seconds.

The relay will always assume the energized position in the event of both windings being energized simultaneously.

It is advisable not to put another load in parallel with the windings of the ML relay.

ML Series Relay for DC Operation with a Resistor/Capacitor Network

R-C Values

Nominal Voltage VDC	R		C	
	Ohms ±5%	Watts	UF	VDC
12	62	2	5000	15
24	240	2	2000	50
48	1000	2	500	100
125	6200	2	150	150

Series ETR Time Delay Relay (Delay on Energization)

Applying a voltage to the input terminals (B1-B4) for more than 50 msec starts a time delay lasting for the preset time period. During this period the normally closed contacts (Four M-R sets) remain closed. At the end of the delay period, the normally closed contacts break and the normally open contacts (Four M-T sets) make. The contacts remain in this position until the relay is deenergized, at which time the contacts instantaneously return to their normal position. Deenergizing the relay, either during or after the delay period will recycle the unit within .075 second. It will then provide a full delay period upon reenergization, regardless of how often the voltage is interrupted before the unit has been permitted to "time-out" to its full delay setting.

**Approximate Weight —**

**Series EGP/EML/ETR —**

1 lb.

**Transient Protection —**

**Series ETR Only —** A 1500 volt transient of less than 100 microseconds, or 1000 volts of less than 1 millisecond will not affect timing accuracy

**Timing Adjustment —**

**Series ETR Only —**

- Internal Fixed
- Internal Potentiometer

**Time Ranges — Series ETR Only —**

- A — .15 to 3 sec.
- B — .55 to 15 sec.
- C — 1 to 30 sec.
- D — 2 to 60 sec.
- E — 4 to 120 sec.
- G — 10 to 300 sec.
- I — 2 to 60 min.
- N — 1 to 30 min.

**Repeat Accuracy —**

**Series ETR Only —**

The repeat accuracy deviation ( $A_R$ ) of a time-delay relay is a measure of the maximum deviation in the time-delay that will be experienced in five successive operations at any particular time setting of the relay and over the operating voltage and temperature range specified. Repeat accuracy is obtained from the following formula:

$$A_R = \pm 100 \frac{(T_1 - T_2)}{(T_1 + T_2)}$$

Where —

- $T_1$  = Maximum Time Delay
- $T_2$  = Minimum Time Delay

The date of manufacture can be found in the first four (4) digits of the serial number on the nameplate:

First two digits indicate XX XX  
the year \_\_\_\_\_

Second two digits indicate \_\_\_\_\_  
the week.

**Example:** In the date code 7814 below:

“78” indicates the year 1978;

“14” indicates the 14th week

(or April 3 through April 7).

<b>Model</b>	
<b>Coil</b>	125 VDC
<b>Serial</b>	78140028

**Note:** TE Corporation does not recommend the use of its products in the containment areas of Nuclear Power Generating Stations.

**REPLACEMENT SCHEDULE**  
**Series EGP/EML/ETR**

The qualified life of these relays is 25,000 electrical operations or 10 years from the date of manufacture, whichever

## AGASTAT GP/TR Series, 10 Amp Control Relay, Non-latching, Latching & Timing Versions

SERIES GP

SERIES TR

### Product Facts

- Occupies very small panel space
- May be mounted singly, in continuous rows or in groups
- Available with screw terminal molded socket.
- 4 SPDT contacts
- Magnetic blowout device option increases DC current carrying ability approximately ten times for both N.O. and N.C. contacts. In both AC and DC operation, the addition of the device will normally double the contact life, due to reduced arcing.
- File E15631, File LR29186

Users should thoroughly review the technical data before selecting a product part number. It is recommended that users also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

### GP/TR Design Features

Among the advances AGASTAT control relays offer over existing designs is a unique contact operating mechanism. An articulated arm assembly amplifies the movement of the solenoid core, allowing the use of a short stroke coil to produce an extremely wide contact gap. The long support arms used in conventional relays are eliminated. Both current capacity and shock/vibration tolerance are greatly increased, as well as life expectancy.

### Design/Construction

AGASTAT control relays are operated by a moving core electromagnet whose main gap is at the center of the coil.

The coil provides a low mean turn length and also assists heat dissipation. Since the maximum travel of the electromagnet does not provide optimum contacts movement, an amplifying device has been designed.

This consists of a W-shaped mechanism, shown in Figure 1. When the center of the W is moved vertically the lower extremities move closer to each other as can be seen in the illustration. The center of the W mechanism is connected to the moving core of the electromagnet and the two lower points are connected to the moving contacts.

Two of these mechanisms are placed side-by-side to actuate the four contacts sets of the relay. These arms act as return springs for their corresponding contacts.

The mechanical amplification of the motion of the electromagnet permits a greater distance between the contacts, while the high efficiency of the electromagnet provides a nominal contact force in excess of 100 grams on the normally open contacts.

All the contacts are positioned well away from the cover and are well ventilated and separated from each other by insulating walls.

The absence of metal-to-metal friction, the symmetrical design of the contact arrangement and the lack of heavy impacts provides a mechanical life of 100,000,000 operations.

For use in AC circuits, the relay is supplied with a built-in rectification circuit, thus retaining the high DC efficiency of the electromagnet. The current peak on energizing is also eliminated and consequently the relay can operate with a resistance in series (e.g. for high voltages or for drop-out by shorting the coil). The use of the rectification circuit offers still other advantages. The same model can operate at frequencies ranging from 40 to 400 cycles. Operation of the relay is possible even with a low AC voltage.

The plastic dust cover has two windows to facilitate cooling and also to allow direct mounting of the relay.

Figure 1 — Illustration of Amplification

This diagram illustrates amplification obtained by the articulated operating mechanism.

Note: Seismic & radiation tested EGP, and ETR models are available. Consult factory for detailed information.

Mechanical — 100 million operations

Electrical — See chart and graph

### Contact Ratings and Expected Life

Voltage	Current (Amps)	Power Factor or Time Constant	Number of Electrical Operations	Remarks
540 VAC	3	COS Ø = 0.5	15,000	2 contacts in series
380 VAC	15	Resistive	10,000	2 contacts in parallel
380 VAC	10	Resistive	200,000	
380 VAC	3 x 3.3	COS Ø = 0.8	200,000	3hp motor
220 VAC	20	Resistive	20,000	2 contacts in parallel
220 VAC	15	COS Ø = 0.5	20,000	2 contacts in parallel
220 VAC	10	Resistive	400,000	
220 VAC	3 x 6	COS Ø = 0.8	200,000	3 hp motor
220 VAC	5		1,500,000	Filament lamps
220 VAC	5	Resistive	3,000,000	
220 VAC	2.5	COS Ø = 0.25	2,000,000	
220 VAC	2	Resistive	15,000,000	
220 VAC	1.25	Resistive	30,000,000	
120 VDC	1.5	Resistive	20,000,000	with blow-out device
48 VDC	10	Resistive	1,000,000	
48 VDC	1.5	5 ms	18,000,000	

### Initial Dielectric Strength —

Between non-connected terminals — 2,000V rms, 60 Hz

Between non-connected terminals & relay yoke — 2,000V rms, 60 Hz

### Initial Insulation Resistance —

Between non-connected terminals — 109 ohms at 500VDC

Between non-connected terminals & relay yoke — 109 ohms at 500VDC

### Coil Data

**Voltage** — 24, 120 & 220VAC, 60 Hz; Add series resistor for 380-440VDC; 12, 24, 48, 125 & 250VDC

**Duty Cycle** — Continuous

### Nominal Coil Power —

6VA for AC coils; 6W for DC coils. There is no surge current during operation.

### Coil Operating Voltage

	DC					AC, 50/60Hz		
Nominal Coil Voltage	12	24	48	125	250	24	120	220
Minimum Pick-up								
Voltage at 20°C	9	18	36	94	187	19	92	175
Minimum Pick-up								
Voltage at 40°C	9.5	19	38	100	200	20	102	188
Maximum voltage for continuous use	13.5	27	53	143	275	27	137	245

For 380VAC — Use 6800 ohms 4 watt resistor in series with 220VAC relay.

For 440VAC — Use 8200 ohms 6 watt resistor in series with 220VAC relay.

Drop-out voltage is between 10% and 40% of the nominal voltages for both DC and AC (For example: in a 120 VAC unit, drop-out will occur between 12 and 48 volts.)

DC relays will function with unfiltered DC from a full-wave bridge rectifier.

### Operate Data @ 20°C

#### Operate Time at Rated Voltage —

Between energizing and opening of normally closed contacts — less than 18 milliseconds on AC and less than 15 milliseconds on DC.

#### Release Time —

Between energizing and closing of normally open contacts — less than 35 milliseconds on AC and less than 30 milliseconds on DC.

Between de-energizing and opening of normally open contacts — less than 70 milliseconds on AC and less than 8 milliseconds on DC.

Between de-energizing and closing of normally closed contacts — less than 85 milliseconds on AC and less than 25 milliseconds on DC.

### Environmental Data

Operating Temperature Range: 0°C to +60°C.

Vibration: Single axis fragility curve data are available on request at frequencies from 5 Hz. to 33 Hz.

Shock: The relay, when kept energized by means of one of its own contact sets, will withstand 40g shock load when operating on DC, and 150g shock load on AC.

### Mechanical Data

#### Mounting Terminals —

16 flat base pins. Screw terminal sockets are available.

#### Wire Connection —

The 16 flat pins are arranged in four symmetrical rows of four pins; the pitch in both directions being .394". Connection may be made to the relay by soldering. Sockets are available with screw terminals.

The internal wiring of the relay is also symmetrical as shown in the adjacent figure, allowing the relay to be inserted into the socket in either of two positions. Terminals B2 and B3 are provided as extra connections for special applications.

#### Weight —

10.9 oz. (308g) approximately

### TR Series

#### Product Facts

- 8 timing ranges
- 4 SPDT contacts
- Magnetic blowout device option increases DC current carrying ability. In both AC and DC operation, the addition of the device will normally increase the contact life, due to reduced arcing.

#### TR Design/Construction

Couples an advanced electromechanical design with a field-proven solid-state timing network.

This unique circuit also eliminates the need for supplementary temperature-compensation components, affording stability over a broad operating temperature range. It also provides transient protection and protection against premature switching of the output contacts due to power interruption during timing.

#### Timing Specifications

- Operating Mode** — On-Delay (Delay on energization)
- Timing Adjustment** — Internal fixed or internal potentiometer
- Timing Ranges** —
  - .15 to 3 sec.
  - .55 to 15 sec.
  - 1 to 30 sec.
  - 2 to 60 sec.
  - 4 to 120 sec.
  - 10 to 300 sec.
  - 1 to 30 min.
  - 2 to 60 min.
- Accuracy** — Repeat — ±2% as fixed temperature and voltage  
Overall — ±5% over combined rated extremes of temperature and voltage
- Reset Time** — 75ms.

#### Contact Data @ 25°C

- Arrangements** — 4 Form C (4PDT)
- Nominal Rating** — 10A @ 120VAC
- Contact Pressure** — Between movable and normally closed contacts — 30 g, typical.  
Between movable and normally open contacts — 100 g, typical.

#### Expected Life

- Mechanical — 100 million operations
- Electrical — See load/life graph
- Initial Dielectric Strength** — Between terminals and case and between mutually-isolated contacts — 2,000VAC
- Initial Insulation Resistance** — Between non-connected terminals — 109 ohms at 500VDC  
Between non-connected terminals & relay yoke — 109 ohms at 500VDC

#### Coil Data

**Voltage** — 120VAC, 50-60 Hz.; 24 & 125VDC

**Transient Protection** — 1,500 volt transient of less than 100 microseconds, or 1,000 volts or less

#### Environmental Data

**Operating Temperature Range** — 0°C to +50°C

#### Mechanical Data

- Mounting Terminals** — 16 flat base pins. Screw terminal sockets are available.
- Weight** — 11 oz. (311g) approximately.

12 Specialty Relays

**AGASTAT GP/TR Series, 10 Amp Control Relay, Non-latching, Latching & Timing Versions** (Continued)

**Accessories for GP/TR Series Control Relays**

**Front Connected Sockets**

**Cat. No. CR0001**  
With captive clamp terminals

**Cat. No. CR0002**  
With (#6) binding head screws

**Cat. No. CR0095**  
With (#6) screw terminals

**Cat. No. CR0067**  
With (#6) screw terminals

**Hold Down (Locking) Springs**

**Cat. No. CR0069**  
For socket: CR0067

**Cat. No. CR0070**  
For socket: CR0095

**Cat. No. CR0111**  
For sockets: CR0001 & CR0002

**Heavy-duty Hold Down (Locking) Straps**

**\*Cat. No. CR0133**  
For socket: CR0001 & CR0002

**\*Cat. No. CR0155**  
For socket: CR0095

\* Catalog number includes strap, strap plate and necessary brackets.

**Magnetic Blowout Device**

**Cat. No. CR0190**  
Reduces arcing on the relay contacts when they make or break contact, either upon energizing or de-energizing, resulting in less contact degradation. Extends the life of the contact.

**Extracting Handle**

**Cat. No. CR0179**  
Used to remove GP and TR units from mounting bases.

**Product Facts**

- Automatic reset minimizes equipment downtime
- Fixed pickup point prevents low voltage start-up
- Adjustable dropout point protects against undervoltage operation
- Delayed dropout prevents nuisance tripping
- Compact, inexpensive design saves space, reduces cost
- Solid state circuitry for enhanced accuracy and long life
- LED indicates normal voltage condition
- File E60363

**VCA Series, Single Phase, Undervoltage Relay**

**Function**

Single phase undervoltage relay

**Sensing Specifications**

**Voltage Set-Point Adjustment**

Internal potentiometer (screwdriver adjustable) with linear calibrated dial

**Response Time** — Depending on severity of undervoltage: 0.1 - 1 sec.

**Accuracy**

Repeat Accuracy — ±0.2%  
Overall Accuracy — ±1%

**Output Data**

**Arrangement** — 1 Form C (SPDT)

**Rating** — 7A @ 250VAC; 1/6 HP @ 250VAC; 300VA @ 120/240VAC; 3A @ 30VDC

**Expected Mechanical Life** —

10,000,000 operations

**Expected Electrical Life** — 100,000

operations at rated resistive load

**Initial Dielectric Strength** —

Between Terminals and Case — 1,480V

Between Relay Contacts and Active

Circuitry — 1,480V

**Input Data**

**Voltage** — 120VAC, 240VAC

**Power Requirement** — 4W max.

**Transient Protection** —

120VAC: ..... 30 joules

240VDC ..... 30 joules

120VAC: ..... 10 joules

120VDC ..... 10 joules

**Environmental Data**

**Temperature Range** —

Storage — -40°C to +85°C

Operating — -23°C to +55°C

**Mechanical Data**

**Mounting** — Panel mount with one

#8 screw

**Termination** — 0.250 in (6.35) quick

connect terminals

**Status Indication** — LED indicates

normal voltage condition

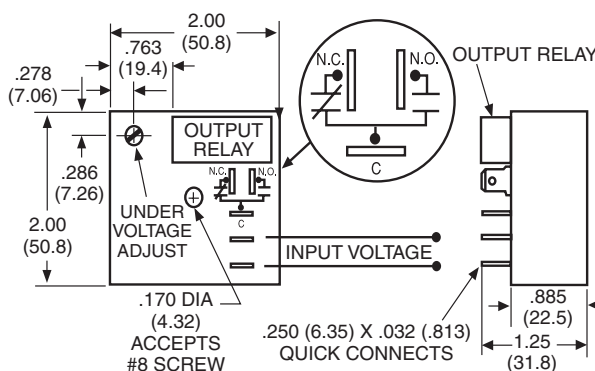

**Weight** — 3.2 oz. (90.7g) approximately

**Ordering Information**

Part Number	Operating Voltage
VCAA	120VAC
VCAB	240VAC

Authorized distributors are likely to stock the following:

None at present.

Outline Dimensions and Wiring Diagram

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

## VMA series, Single Phase, Plug-in, Undervoltage Relay

### Product Facts

- Automatic reset minimizes equipment downtime
- Fixed pickup point prevents low voltage start-up
- Adjustable dropout point protects against undervoltage operation
- Locking potentiometer maintains selected set point
- Delayed dropout prevents nuisance tripping
- Plug-in mounting for easier installation
- Built-in protection against polarity reversal
- LED indicates normal voltage condition
- File E60363 

### Function

Single phase undervoltage relay

### Sensing Specifications

#### Voltage Set-Point Adjustment —

Locking potentiometer with calibrated dial

**Response Time** — Standard 0.5 sec. delay on dropout

#### Accuracy —

Repeat Accuracy —  $\pm 0.5\%$  under fixed conditions

Overall Accuracy —  $\pm 1\%$

#### Temperature Coefficient —

$\pm 0.02\%/^{\circ}\text{C}$  (Max.)

### Output Data

**Arrangement** — 2 Form C (DPDT)

**Rating** — 7A @ 250VAC; 1/6 HP @ 250VAC; 300VA @ 120/240VAC;

3A @ 30VDC

#### Expected Mechanical Life —

10,000,000 operations

#### Expected Electrical Life —

100,000 operations at rated resistive load

### Initial Dielectric Strength —

Between Terminals and Case — 1,480V

Between Relay Contacts and Active Circuitry — 1,480V

### Input Data

**Voltage** — See ordering information.

**Power Requirement** — 4W max.

#### Transient Protection —

24VAC . . . . . 1.5 joules

24VDC . . . . . 1.5 joules

48VDC . . . . . 10 joules

120VAC . . . . . 10 joules

125VDC . . . . . 10 joules

240VDC . . . . . 20 joules

#### Reverse Polarity Protection —

On DC models

**Duty Cycle** — Continuous

### Environmental Data

#### Temperature Range —

Storage —  $-30^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$

Operating —  $-10^{\circ}\text{C}$  to  $+55^{\circ}\text{C}$

### Mechanical Data

**Mounting** — Octal plug. Fits 27E122 or 27E891 (snap-on) screw terminal socket. Order socket separately.

**Enclosure** — Nylon cover protects against particles.

**Status Indication** — LED indicates normal voltage condition.

**Weight** — 6 oz. (168g) approximately.

### Ordering Information

Part Number	Nominal Voltage	Pick-Up (V)	Drop-Out Range (V)
VMAXEA	24VAC	21	15 to 20
VMAXAA	120VAC	104	78 to 99
VMAXBA	240VAC	209	156 to 199
VMAXOA	24VDC	21	15 to 20
VMAXNA	48VDC	42	31 to 40
VMAXPA	125VDC	109	81 to 103

Authorized distributors are likely to stock the following:

None at present.

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

## SCB/SCC Series, Specification Grade Discrete Plug-in, Time Delay Relay

### Product Facts

- On-Delay, Off-Delay and Interval timing modes
- 13 timing ranges from 0.1 sec. to 60 min.
- 10A DPDT output contacts
- Knob, fixed or external timing adjustment.
- Rated for pilot duty
- Premium components
- File 3520, File E60363, File LR51332, File E60363 (SCC only)

### Timing Specifications

**Timing Modes** — On-Delay, Off-Delay and Interval  
**Timing Ranges** — 6 to 180 cycles; 0.1 to 3 / 0.1 to 10 / 0.33 to 10 / 1 to 30 / 4 to 120 sec.; 0.33 to 10 / 1 to 30 / 2 to 60 min.; 0.33 to 10 hr. (All are +5%, -0% of maximum values).

**Timing Adjustment** — Knob or fixed time (internal fixed resistor) — all models; customer supplied external potentiometer or resistor — On-Delay and Interval models only.

**Accuracy** — Repeat Accuracy — ±0.5% ±0.004 sec. Overall Accuracy — ±2% max.

**Reset Time** — 25 ms.

**Relay Operate Time** — Off-Delay mode — 30 ms; Interval mode — 20 ms..

**Relay Release Time** — On-Delay mode only — 15 ms.

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

### Contact Data @ 25°C

**Arrangements** — 2 Form C (DPDT)  
**Rating** — 10A @ 28VDC or 120VAC, resistive; 1/3 HP @ 120/240VAC; 345VA. Same polarity.

**Expected Mechanical Life** — 10 million operations

**Expected Electrical Life** — 500,000 operations, min., at rated resistive load

**Initial Dielectric Strength** — Between Terminals and Case — 1,000VAC plus twice the nominal voltage for one minute.

### Input Data @ 25°C

**Voltage** — See Ordering Information section for details.

**Power Requirement** — 3W, max. Transient Protection: Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
All except 12 & 24	3,000V	2,500
12 & 24	Consult Factory	

### Environmental Data

**Temperature Range** — Storage — SCB and SCC — -40°C to +85°C Operating — SCB: -30°C to +65°C; SCC: -30°C to +50°C

### Mechanical Data

**Mounting/Termination** — SCB — UL recognized. Optional 8- or 11-pin octal-type sockets may be ordered separately. SCC — 8- or 11-pin octal type sockets supplied with timer. (Must be used to qualify as "UL Listed" device.)

**Weight** — SCB: 5.3 oz. (149g) approx.; SCC: 7.5 oz. (210g) approx.

12 Specialty Relays

## SCE Series, Specification Grade Discrete Plug-in, True Off-Delay Time Delay Relay

### Product Facts

- True Off-Delay timing modes
- Six time delays from 0.1 sec. to 10 min.
- 10A SPDT or 5A DPDT output contacts
- Excellent repeat accuracy — typically better than ±1%
- 8-pin octal plug.

E15631, File LR51332

**CAUTION:** If unit has not been energized for several months, apply operating voltage for 20 minutes prior to initial time delay.

### Timing Specifications

**Timing Modes** — True Off-Delay — Upon application of operating voltage (min. 100ms), output relay contacts transfer. When operating voltage is removed, the time delay period is initiated. At the end of the delay period, output relay contacts release. If operating voltage is reapplied prior to expiration of the delay period, the delay will be cancelled and output relay contacts will remain transferred.

**Timing Ranges** — 0.1 to 3 / 0.5 to 15 / 1 to 30 / 4 to 120 / 10 to 300 sec.; 0.33 to 10 min.

**Timing Adjustment** — Knob adjustment — Internal potentiometer with external knob adjustment. Maximum time calibrated with +10%, -0% of values shown below at rated voltage, at 68°F. Fixed time — internal fixed resistor.

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

**Accuracy** — Repeat Accuracy — ±1%  
Overall Accuracy — ±5%  
**Reset Time** — 30 ms. min.  
**Relay Operate Time** — 30 ms.

**Contact Data @ 25°C**  
**Arrangements** — 1 Form C (SPDT) and 2 Form C (DPDT)

**Rating** — 1 Form C — 10A @ 120/240VAC, resistive; 1/3 HP @ 120VAC; 345VA @ 120VAC; 1/4 HP @ 240VAC; 275VA @ 240VAC. Same polarity.  
2 Form C — 5A @ 28VDC or 120/240VAC, resistive; 1/6 HP @ 120/240VAC; 200VA @ 120/240VAC. Same polarity.

**Expected Mechanical Life** — 10 million operations  
**Expected Electrical Life** — 200,000 operations, min., at rated resistive load

**Initial Dielectric Strength** — Between Terminals and Case and relay contacts and active circuitry — 1,480VAC for one minute

### Input Data @ 25°C

**Voltage** — See Ordering Information section for details

**Power Requirement** — 750mW  
Transient Protection — 1,000V plus twice rated voltage for 0.1 ms

### Environmental Data

**Temperature Range** — Storage — -40°C to +85°C  
Operating — -30°C to +65°C

### Mechanical Data

**Mounting/Termination** — 8-pin octal plug fits either 27E122 or 27E891 (snap-on) socket (order separately)

**Weight** — 4 oz. (112g) approximately

Fixed Time Or Knob Adjust

Fixed Time Or Knob Adjust

Authorized distributors are likely to stock the following:  
None at present.

**Product Facts**

- 4 user-programmable timing modes
- 0.1 sec. to 10 hr. programmable timing range
- Parameters set with recessed dials
- Narrow width saves panel space
- 10A DPDT output relay
- Socket can be DIN-rail or back panel mounted
- File E15631(relay) and E140494 (socket)
- File LR29186 (relay)

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

**Wiring Diagram (Bottom View)**

**SCF Series, Programmable, Time Delay Relay**

**Timing Modes**

Modes are user selectable via screwdriver adjustment of recessed 4-position selector dial.

Modes offered are: On-Delay, Off-Delay, Interval and Latching Interval.

**Timing Specifications**

**Timing Ranges** — 0.1 to 3 / 0.33 to 10 / 1 to 30 / 4 to 120 sec.; 0.33 to 10 / 1 to 30 / 2 to 60 min.; 0.33 to 10 hr.

**Timing Range Selection** — Screwdriver select via recessed 8-position selector dial.

**Timing Adjustment** — External knob potentiometer adjustment with reference calibrations.

**Accuracy** — Repeat Accuracy — ±1% ±0.01 sec. Overall Accuracy — ±3% ±0.01 sec.

**Reset Time** — 30 ms.

**Relay Operate Time** — On-Delay and Interval mode: 55 ms.

**Relay Release Time** — Off-Delay, Interval and Latching Interval: 40 ms.

**Contact Data @ 25°C**

**Arrangements** — 2 Form C (DPDT).

**Rating** — 10A @ 28VDC or 120VAC, resistive; 1/3 HP @ 120/240VAC; 345VA.

**Expected Mechanical Life** — 10 million operations.

**Expected Electrical Life** — 500,000 operations, min., at rated resistive load.

**Initial Dielectric Strength** — Between Terminals and Case — 1,000VAC plus twice the nominal voltage for one minute.

**Input Data @ 25°C**

**Voltage** — See Ordering Information section for details.

**Power Requirement** — 2W, max.

**Transient Protection** — Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
12VDC	1,000V	240V*
24VAC/VDC	1,000V	240V*

## SRC Series, Specification Grade Repeat Cycle, Plug-in Time Delay Relay

### Product Facts

- Repeat Cycle timing mode
- Dual knobs for user adjustment of on and off times
- 13 timing ranges from 0.1 sec. to 60 min.
- 10A DPDT output contacts
- Exceptional immunity to line transients and noise
- Premium components enhance reliability
- Superior reset time of 24 msec.

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

Outline Dimensions

Wiring Diagram (Bottom View)

### Timing Specifications

#### Timing Modes —

Repeat Cycle: Application of line voltage starts the pre-set OFF-time period. Upon expiration of the period, the output relay is energized, its contacts transfer, and the pre-set ON-time period begins. At the end of this period the output relay is deenergized, and a new cycle begins. The OFF and ON cycles continue until power is removed. To reset the timer, input voltage must be removed for at least 25 ms.

**Timing Ranges** — OFF time and ON time ranges need not be the same. 6 to 180 cycles; 0.1 to 3 / 1 to 10 / 0.5 to 15 / 1 to 30 / 2 to 60 / 4 to 120 / 6 to 180 / 10 to 300 sec.; 0.33 to 10 / 0.5 to 15 / 1 to 30 / 2 to 60 min. (All are +10%, -1% of maximum values).

**Timing Adjustment** — Two internal potentiometers with external knobs.

**Accuracy** — Repeat Accuracy — ±1% ±0.004 sec. Overall Accuracy — ±2.25% max.

**Reset Time** — 25 ms. max. (between deenergization and reenergization without affecting accuracy.)

**Relay Operate Time** — 20 ms.

**Relay Release Time** — 15 ms.

### Contact Data @ 25°C

**Arrangements** — 2 Form C (DPDT).

**Rating** — 10A @ 28VDC or 120VAC, resistive; 1/3 HP @ 120/240VAC.

**Expected Mechanical Life** — 10 million operations

**Expected Electrical Life** — 500,000 operations, min., at rated resistive load.

**Initial Dielectric Strength** — Between Terminals & Case and Mutually Isolated Contacts — 1,480VAC.

### Input Data @ 25°C

**Voltage** — See Ordering Information section for details.

**Power Requirement** — 3W max.

**Transient Protection** — Non-repetitive transients of the following magnitudes will not cause spurious operation or affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
12VDC	1,000V	240V*
12VDC	1,000V	240V*
24VAC/VDC	1,000V	240V*
48 VAC/VDC	1,000V	480V*
120 VAC/VDC	3,000V	2,500V*
240VAC	3,000V	2,500V*

\*Minimum source impedance of 100 ohm

### Environmental Data

**Timing Modes** — On-Delay, Off-Delay and Interval.  
**Timing Ranges** — 6 to 180 cycles; 0.1 to 3 / 0.1 to 10 / 0.33 to 10 / 1 to 30 / 4 to 120 sec.; 0.33 to 10 / 1 to 30 / 2 to 60 min.; 0.33 to 10 hr. (All are +10%, -1% of maximum values).

**Timing Adjustment** — Knob or fixed time (internal fixed resistor) — all models; customer supplied external potentiometer or resistor — On-Delay and Interval models only.

**Accuracy** — Repeat Accuracy — ±1% ±0.004 sec. at any combination of operating temperature and voltage. Overall Accuracy — ±5.25% throughout operating temperature and voltage ranges.

**Reset Time** — 25 ms. (minimum deenergized interval for on-delay or off-delay models, or minimum required closure interval for interval models without affecting accuracy.)

**Relay Operate Time** — Off-Delay mode only: 35 ms.

**Relay Release Time** — On-Delay mode only: 20 ms.

### Contact Data @ 25°C

**Arrangements** — 2 Form C (DPDT).  
**Rating** — 10A @ 28VDC or 120VAC, resistive; 1/3 HP @ 120/240VAC.

**Expected Mechanical Life** — 10 million operations

**Expected Electrical Life** — 500,000 operations, min., at rated resistive load.

**Initial Dielectric Strength** — Between Terminals and Case — 1,000VAC plus twice the nominal voltage for one minute.

### Input Data @ 25°C

**Voltage** — See Ordering Information section for details.

**Power Requirement** — 3W max.

**Transient Protection** — Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
12VDC	1,000V	240V*
12VDC	1,000V	240V*
24VAC/VDC	1,000V	240V*
48 VAC/VDC	1,000V	480V*
120 VAC/VDC	3,000V	2,500V*
240VAC	3,000V	2,500V*

\*Minimum source impedance of 100 ohm

### Environmental Data

**Temperature Range** — Storage — -40°C to +85°C  
 Operating — -30°C to +65°C

### Mechanical Data

**Mounting/Termination** — 8- or 11-pin octal type plug. 8-pin types fit either 27E122 or 27E891, while 11-pin types fit 27E123 or 27E892.

**Weight** — 4 oz. (112g) approximately

### Ordering Information

### Operating Voltage (+10%, -15%)

- A = 120VAC, 50/60 Hz. / 120VDC
- B = 240VAC, 50/60 Hz.
- E = 24VAC, 50/60 Hz. / 24VDC
- F = 48VAC, 50/60 Hz. / 48VDC
- Q = 12VDC (±10%)

### Timing Adjustment

- A = Knob Adjust
- B = External Potentiometer or resistor (Operating modes 1 and 3 only).
- F = Fixed Times — Specify time delay in seconds per the following examples:  
 F9.000 = 9 sec.  
 F99.00 = 99 sec.  
 F999.0 = 9999 sec.  
 F1000 = 1000 sec.

Authorized distributors are likely to stock the following:

- SSC12AAA      SSC12ACA      SSC12AGA
- SSC12ABA      SSC12ADA      SSC12ALA

## SSF Series, Programmable Time Delay Relay

### Product Facts

- 4 user-programmable timing modes
- 0.1 sec. to 10 hr. programmable timing range
- Parameters set with recessed screwdriver dials
- Universal voltage (plug-in relay dependent)
- 10A DPDT replaceable output relay minimizes downtime
- Front screw terminals
- DIN-rail, panel or machine tool track mount

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

### Timing Specifications

**Timing Modes** — Modes are user selectable via screwdriver adjustment of recessed 4-position selector dial. Modes offered are: On-Delay, Off-Delay, Interval and Latching Interval.

**Timing Ranges** — 0.1 to 3 / 0.33 to 10 / 1 to 30 / 4 to 120 sec.; 0.33 to 10 / 1 to 30 / 2 to 60 min.; 0.33 to 10 hr.

**Timing Range Selection** — Screwdriver select via recessed 8-position selector dial.

**Timing Adjustment** — Recessed potentiometer adjustment with reference calibrations.

**Accuracy** — Repeat Accuracy —  $\pm 1\% \pm 0.01$  sec. Overall Accuracy —  $\pm 3\% \pm 0.01$  sec.

**Reset Time** — 30 ms.

**Relay Operate Time** — On-Delay and Interval mode: 30 ms.

**Relay Release Time** — Off-Delay, Interval and Latching Interval: 30 ms. (with factory-installed relay).

### Contact Data @ 25°C

**Arrangements** — 2 Form C (DPDT).

**Rating** — 10A @ 28VDC or 120VAC, resistive; 1/3 HP @ 120/240VAC 345VA.

**Expected Mechanical Life** — 10 million operations (with factory-installed relay).

**Expected Electrical Life** — 500,000 operations, min., at rated resistive load (with factory-installed relay).

**Initial Dielectric Strength** — Between Coil/Control Switch and Contacts — 1,500VAC for one minute.

### Input Data @ 25°C

**Voltage** — See Ordering Information section for details.

**Power Requirement** — 2W max.

### Transient Protection

Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
24, 48 VAC/VDC	1,000V	480V
120, 240VAC/VDC	3,000V	2500V*

\* Min. source impedance of 100 ohm@120/240VAC, 3000V <0.1 , sec. Environmental Data

### Environmental Data

**Temperature Range** — Storage — -40°C to +85°C Operating — -30°C to +65°C

### Mechanical Data

**Mounting/Termination** — Panel, DIN-rail, Machine Tool mounting track mounting case with screw terminals.

**Weight** — 5.5 oz. (156g) approximately

## SST Series, Industrial Grade Discrete Plug-in, Time Delay Relay

### Product Facts

- On-Delay, Off-Delay, Interval, One Shot & Repeat modes
- Time delays to 120 min.
- Fast setting with time calibrated knobs
- Superior transient protection
- Rugged construction with 8- or 11-pin plug
- Flame retardant housing
- File E15631, File LR33434

### Timing Specifications

**Timing Modes** — On-Delay, Off-Delay, Interval, One Shot (Latching Interval) or Repeat Cycle.

**Timing Ranges** — Nine ranges spanning 0.1 sec. to 120 min.

**Timing Adjustment** — Knob adjust.

**Accuracy** —

Repeat Accuracy — ±1%

Overall Accuracy — ±5%

**Reset Time** — 50 ms., max., (25 ms typ.) for on-delay and interval; 300 ms, max., for off-delay and one shot; 500 ms, max., for repeat type.

**Relay Operate Time** — 50 ms.

**Relay Release Time** — 30 ms.

### Contact Data @ 25°C

**Arrangements** — 2 Form C (DPDT)

**Rating** — 10A @ 120/240VAC, resistive; 1/3 HP @ 120/240VAC, 50/60 Hz.

**Expected Mechanical Life** — 10 million operations

**Expected Electrical Life** — 500,000 operations, min., at rated resistive load.

**Initial Dielectric Strength** — Between Contacts, Line Inputs and Control Circuits — 1,500V RMS, minimum, at 60 Hz.

### Input Data @ 25°C

**Voltage** — See Ordering Information section for details.

**Power Requirement** — 3W max.

### Transient Protection

Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
12VDC	1,000V	240V*
12 & 24 VAC/VDC	860V	208V*
120 VAC	2,580V	2,150V*

\*Minimum source impedance of 100 ohm.

### Environmental Data

**Temperature Range** —

Storage — -23°C to +71°C

Operating — -23°C to +54°C

### Mechanical Data

**Mounting/Termination** — On-Delay, Interval and Repeat types have 8- pin octal plug that fits either 27E122 or 27E891 socket. Off-Delay and One Shot types have 11-pin octal-type plug that fits 27E123 or 27E892. Sockets must be ordered separately.

**Weight** — 4 oz. (112g) approximately

## STA Series, Specification Grade Discrete Plug-in, Time Delay Relay With QC Terminals

### Product Facts

- On-Delay, Off-Delay, Interval and Accumulating On-Delay timing modes
- 13 timing ranges from 0.1 sec. to 48 hr.
- 10A DPDT output contacts
- Knob, fixed or external timing adjustment
- QC plug-in terminals save space, two LEDs show status
- File 3520, File E60363, File LR51332

### Timing Specifications

**Timing Modes** — On-Delay, Off-Delay, Interval and Accumulating On-Delay.

**Timing Ranges** — 6 to 180 cycles; 0.1 to 3 / 0.5 to 15 / 1 to 30 / 2 to 60 / 4 to 120 / 6 to 180 / 10 to 300 sec.; 0.33 to 10 / 0.5 to 15 / 1 to 30 min.; 1 to 6 / 2 to 48 hr. (All are +5%, -0% of maximum values).

**Timing Adjustment** — Knob or fixed time (internal fixed resistor) — all models; customer supplied external potentiometer or resistor — On-Delay and Interval models only.

**Accuracy** — Repeat Accuracy —  $\pm 5\% \pm 0.004$  sec. Overall Accuracy —  $\pm 2\%$  throughout operating temperature and voltage ranges.

**Reset Time** — 30 ms. min. (between deenergization and reenergization without affecting accuracy.)

**Relay Operate Time** — Off-Delay mode: 35 ms.; Interval mode — 20 ms.

**Relay Release Time** — On-Delay and Accumulating On-Delay modes — 20 ms

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

### Contact Data @ 25°C

**Arrangements** — 2 Form C (DPDT).

**Rating** — 10A @ 28VDC or 120VAC, resistive; 1/3 HP @ 120/240VAC; 345VA. Same polarity.

**Expected Mechanical Life** — 10 million operations

**Expected Electrical Life** — 500,000 operations, min., at rated resistive load.

**Initial Dielectric Strength** — 1,000VAC plus twice the nominal voltage for one minute.

### Input Data @ 25°C

**Voltage** — See Ordering Information section for details.

**Power Requirement** — 3W max.

## VTM1 Series, On-Delay, Timing Module

### Product Facts

- On-delay timing mode
- Reliable solid state timing circuitry
- Excellent transient protection
- Compact design
- Flame retardant, solvent resistant housing
- File E60363, File LR33434

### Timing Specifications

**Timing Mode** — On-Delay

**Timing Ranges** — 0.5 to 10 / 3 to 60 sec.; 0.5 to 10 / 3 to 60 min.

**Timing Range Selection** — Screwdriver select via recessed 8-position selector dial.

**Timing Adjustment** — External resistor or potentiometer. An external resistance of 1 megohm is required to obtain the maximum time for all ranges. To determine the actual resistance needed to obtain the required time delay, use the following formula:

$$R_T = \frac{(T_{REQ} - T_{MIN})}{T_{MAX} - T_{MIN}} \times 1,000,000 \text{ ohms}$$

### Accuracy

Repeat Accuracy — ±1%  
Overall Accuracy — ±2% at R = 1 megohm

**Reset Time** — 100 ms, max., before time-out; 10 ms, max., after time-out.

### Output Switch Data

**Arrangement** — Solid state 1 Form A (SPST-NO)

**Rating** — 1A, inductive, at nominal operating voltage.

**Expected Electrical Life** — 10,000,000 operations at rated load.

**Initial Dielectric Strength** — Between Terminals and Mounting — 3,000VAC rms.  
Between Input and Output — 1,500VAC rms.

### Input Data @ 25°C

**Voltage** — 12 VAC/VDC, 24VAC/VDC, 120 VAC/VDC.

**Power Requirement** — 3W max.

**Transient Protection** — Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
12, 24 VAC/VDC	860V*	208V*
120 VAC/VDC	2,580V	2,150V*

\* Min. source impedance of 100 ohm.

### Environmental Data

**Temperature Range** —  
Storage — -40°C to +85°C  
Operating — -40°C to +65°C

### Mechanical Data

**Mounting** — Panel mount with one #8 screw.

**Termination** — 0.250 in (6.35) quick connect terminals.

**Weight** — 3 oz. (84g) approximately

Outline Dimensions

Wiring Diagram

An external resistance of 1 megohm is required to obtain the maximum time for all ranges. To determine the actual resistance needed to obtain the required time delay, use the following formula:

$$R_T = \frac{(T_{REQ} - T_{MIN})}{T_{MAX} - T_{MIN}} \times 1,000,000 \text{ ohms}$$

### Ordering Information

VTM1	A	CD
Series VTM1 On-Delay Timing Module	Input Voltage A = 120VAC/VDC E = 24VAC/VDC Q = 12VAC/VDC	Time Range CD = 0.5 - 10 sec. DD = 3 - 60 sec. FD = 0.5 - 10 min. GD = 3 - 60 min.

## VTM-1 Series, Specification Grade, On-Delay, Timing Module

### Product Facts

- On-delay timing mode
- Timing from 1 to 1000 sec.
- 1A solid state SPST-NO output
- 0.25" (6.35) quick connect terminals
- Universal voltage: 24 to 240VAC/VDC
- Rated to 10 million operations
- File E60363, File LR51332

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

Wiring Diagram

### Timing Specifications

**Timing Mode** — On-Delay — VTM-1 in-line timing module is wired in series with the load circuit. Time delay is initiated when power is applied to the series network. Connecting a resistor across the center terminals provides tamper-proof setting of time delay from 1-1000 sec.

**Timing Ranges** — 1 to 1,000 sec.

**Timing Adjustment** — Time delay is set by connecting an appropriately rated resistor or potentiometer between the center two terminals. As supplied, the unit provides a nominal 1 second delay. Add 10k ohm of resistance for every additional second of delay required. For example: 5 seconds = 40k ohms; 10 seconds = 90k ohms.

**Accuracy** — Repeat Accuracy —  $\pm 2\%$

**Reset Time** — 100 ms, max., in the timing or time-out condition.

### Output Switch Data

**Arrangement** — 1 Form A (SPST-NO)

**Rating** — 5A, inductive, at nominal operating voltage.

**Inrush** — Not to exceed 10A for one cycle.

**Max. Leakage Current** — 4mA rms

**Expected Electrical Life** — 10,000,000 operations at rated load.

**Initial Dielectric Strength** — Between Active Terminals and Outside of Case — 1,480VAC for one min.

### Input Data @ 25°C

**Operating Voltage** — Universal — 24-240VAC/VDC (19-288VAC/VDC).

**Current** — 2mA (max.) required to operate timer regardless of output state.

**Power Requirement** — 3W max.

**Transient Protection** — MOV across input 2,000V for 11 $\mu$ s on line side of load.

### Environmental Data

**Temperature Range** — Storage —  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$   
Operating —  $-30^{\circ}\text{C}$  to  $+65^{\circ}\text{C}$

### Mechanical Data

**Mounting** — Screw mount in horizontal or vertical position through built-in mounting ears.

**Termination** — 0.250 in (6.35) quick connect terminals for input line, load output and timing resistor connection.

**Weight** — 3 oz. (84g) approximately

Outline Dimensions

### Ordering Information

Part Number	Mode	Input Voltage
VTM-1	On-Delay	24-240VAC or VDC

### Notes:

1. Do not operate timer without connecting load in series with line voltage.
2. For a time delay of 1 second, connect a jumper across the center two terminals.

Authorized distributors are likely to stock the following:

VTM-1

## VTM2 Series, Off-Delay, Timing Module

### Product Facts

- Off-delay timing mode
- Reliable solid state timing circuitry
- Excellent transient protection
- Compact design
- Flame retardant, solvent resistant housing
- File E60363, File LR33434

### Timing Specifications

**Timing Mode** — Off-Delay

**Timing Ranges** — 0.5 to 10 / 3 to 60 sec.; 3 to 60 min.

**Timing Adjustment** — External resistor or potentiometer. An external resistance of 1 megohm is required to obtain the maximum time for all ranges. To determine the actual resistance needed to obtain the required time delay, use the following formula:

$$R_T = \frac{(T_{REQ} - T_{MIN})}{T_{MAX} - T_{MIN}} \times 1,000,000 \text{ ohms}$$

**Accuracy** —

Repeat Accuracy — ±1%

Overall Accuracy — ±2% at

R = 1 megohm

**Reset Time** — 50 ms, max.

### Output Switch Data

**Arrangement** — Solid state 1 Form A (SPST-NO)

**Rating** — 1A, inductive, at nominal operating voltage.

**Expected Electrical Life** — 10,000,000 operations at rated load.

**Initial Dielectric Strength** —

Between Terminals and Mounting — 3,000VAC rms.

Between Input and Output — 1,500VAC rms.

### Input Data @ 25°C

**Voltage (±10%)** — 12 VAC/VDC, 24VAC/VDC, 120 VAC/VDC.

**Power Requirement** — 4W with rated load

**Transient Protection** —

Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
12, 24 VAC/VDC	860V*	208V*
120 VAC/VDC	2,580V	2,150V*

\* Min. source impedance of 100 ohm.

### Ordering Information

VTM2	A	CD
Series VTM2 Off-Delay Timing Module	Input Voltage A = 120VAC/VDC E = 24VAC/VDC Q = 12VAC/VDC	Time Range CD = 0.5 - 10 sec. DD = 3 - 60 sec. GD = 3 - 60 min.

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

**Authorized distributors are likely to stock the following:**  
None at present.

## VTM3 Series, Interval, Timing Module

### Product Facts

- Interval timing mode
- Reliable solid state timing circuitry
- Excellent transient protection
- Compact design
- Flame retardant, solvent resistant housing
- File E60363, File LR33434

### Timing Specifications

**Timing Mode** — Interval

**Timing Ranges** — 0.5 to 10 / 3 to 60 sec.; 3 to 60 min.

**Timing Adjustment** — External resistor or potentiometer. An external resistance of 1 megohm is required to obtain the maximum time for all ranges. To determine the actual resistance needed to obtain the required time delay, use the following formula:

$$R_T = \frac{(T_{REQ} - T_{MIN})}{T_{MAX} - T_{MIN}} \times 1,000,000 \text{ ohms}$$

**Accuracy** —

Repeat Accuracy — ±1%  
Overall Accuracy — ±2% at R = 1 megohm

**Reset Time** — 50 ms, max.

### Output Switch Data

**Arrangement** — Solid state 1 Form A (SPST-NO)

**Rating** — 1A, inductive, at nominal operating voltage.

**Expected Electrical Life** — 10,000,000 operations at rated load.

**Initial Dielectric Strength** — Between Terminals and Mounting — 3,000VAC rms.

Between Input and Output — 1,500VAC rms.

### Input Data @ 25°C

**Voltage (±10%)** — 12 VAC/VDC, 24VAC/VDC, 120 VAC/VDC.

**Power Requirement** — 4W with rated load

### Transient Protection

Non-repetitive transients of the following magnitudes will not cause spurious operation or affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
12, 24 VAC/VDC	860V*	208V*
120 VAC/VDC	2,580V	2,150V*

\* Min. source impedance of 100 ohms.

**Current Drain** — Less than 5mA.

### Environmental Data

**Temperature Range** —  
Storage — -40°C to +85°C  
Operating — -40°C to +65°C

### Mechanical Data

**Mounting** — Panel mount with one #8 screw.

**Termination** — 0.250 in (6.35) quick connect terminals.

**Weight** — 4 oz. (112g) approximately

Outline Dimensions

Wiring Diagram

An external resistance of 1 megohm is required to obtain the maximum time for all ranges. To determine the actual resistance needed to obtain the required time delay, use the following formula:

$$R_T = \frac{(T_{REQ} - T_{MIN})}{T_{MAX} - T_{MIN}} \times 1,000,000 \text{ ohms}$$

### Ordering Information

## VTMA1 Series, On-Delay Timing Module, With Internal Potentiometer

### Product Facts

- On-delay timing mode
- Discrete voltage or universal type
- Internal potentiometer for timing adjustment
- Reliable solid state timing circuitry
- Excellent transient protection
- Flame retardant, solvent resistant housing
- File E60363, File LR33434

### Timing Specifications

**Timing Mode** — On-Delay

#### Timing Ranges —

VTMA1ULA only — 24 to 480 sec.  
 All others — 0.5 to 10 / 3 to 60 / 15 to 300 sec.; 3 to 60 min.

#### Timing Adjustment —

Internal potentiometer

#### Accuracy —

Repeat Accuracy — ±5%  
 Overall Accuracy —  
 Max. Time: -0%, +10%.  
 Min. Time: -30%, +10%.

**Reset Time** — 250 ms, max., before time-out; 10 ms, max., after time-out.

### Output Switch Data

**Arrangement** — Solid state 1 Form A (SPST-NO)

**Rating** — 1A, inductive, at nominal operating voltage.

**Expected Electrical Life** — 10,000,000 operations at rated load.

**Initial Dielectric Strength** — Between Terminals and Mounting — 3,000VAC rms.

Between Input and Output — 1,500VAC rms.

### Input Data @ 25°C

**Voltage (±10%)** — 120VAC/VDC (unfiltered DC must be full-wave rectified) or 24 to 240 VAC/VDC.

**Power Requirement** — 250mW during timing; 3W, max. after time out.

**Transient Protection** — Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
24 VAC/VDC	860V*	208V*
120/240 VAC/VDC	2,580V	2,150V*

\* Min. source impedance of 100 ohms.

**Current Drain** — 2mA, Max.

### Environmental Data

## VTMR1 Series, On-Delay Timing Module, With Internal Potentiometer, Relay Output

### Product Facts

- On-delay timing mode
- 8A SPDT relay output
- Internal potentiometer for timing adjustment
- Reliable solid state timing circuitry
- Excellent transient protection
- Flame retardant, solvent resistant housing
- File E60363, File LR33434

### Timing Specifications

**Timing Mode** — On-Delay  
**Timing Ranges** — 15 to 300 sec.  
**Timing Adjustment** — Internal potentiometer  
**Accuracy** — Repeat Accuracy — ±5% max. (0.25% typ.)  
 Overall Accuracy — Max. Time: -0%, +10%.  
 Min. Time: -30%, +10%.  
**Reset Time** — 250 ms, max.

### Output Switch Data

**Arrangement** — 1 Form C (SPDT)  
**Rating** — 8A, resistive, at nominal operating voltage.  
**Expected Mechanical Life** — 10,000,000 operations  
**Expected Electrical Life** — 100,000 operations  
**Initial Dielectric Strength** — Between Terminals and Mounting — 3,000VAC rms.  
 Between Input and Output — 1,500VAC rms.

### Input Data @ 25°C

**Voltage (±10%)** — 120VAC/VDC  
**Power Requirement** — 3.5VA max. during timing; 3W, max. after time out.  
**Transient Protection** — Non-repetitive transients of the following magnitudes will not cause spurious operation of affect function and accuracy.

Operating Voltage	<0.1 ms	<1 ms
120 VAC/VDC	2,580V	2,150V*

\* Min. source impedance of 100 ohms.

**Current Drain** — 30mA, Max.

### Environmental Data

**Temperature Range** — Storage — -40°C to +70°C  
 Operating — -40°C to +70°C

### Mechanical Data

**Mounting** — Panel mount with one #8 screw.  
**Termination** — 0.250 in (6.35) quick connect terminals.  
**Weight** — 4 oz. (112g) approximately

## CII Custom High Performance Solenoids

### Product Facts

- Designed and built to customer requirements
- Push, pull or combination motion
- Broad operating temperature range
- Multiple termination and mounting options
- 200°C magnet wire insulation is standard

### Description

Custom-designed linear solenoids for demanding applications

Top-end devices are engineered for applications where extreme temperatures and other severe environmental conditions may exist

High altitude, shock, acceleration and vibration reliable

### Product Options

Linear motion, tubular solenoid line ranges from models only one-half inch (12.7 mm) in diameter producing only a few ounces (<1N) of force at very short strokes, to three-inch (76.2 mm) diameter models capable of 100 pounds (445N) force at one-inch (25.4 mm) strokes

Push, pull or combination motion available

Continuous or intermittent duty coils available

AC voltages can be handled through the use of internal rectifiers

Dual coil models with low holding power requirement may be appropriate in power sensitive equipment

Solenoids with plunger seals can be built for harsh environments

Solenoids can be made water-resistant, fuel-resistant and with encapsulated coils (ferrous parts are plated for protection against corrosion)

Leads are normally provided with fluoropolymer insulation, PTFE or ETFE; however, any type wire may be used as specified by the customer. MIL type connectors may also be used when specified. Can be provided with flat or conical face depending on stroke

Solenoid plungers can be internally or externally threaded or have clevis attachment

Prototype solenoids can be custom built to a customer's requirements

### Electrical Characteristics

Voltage Rating —  
6 to 270 VDC  
28 to 115 VAC (60 or 400 Hz)

### Mechanical Characteristics

Ambient Temperature Range —  
-65°C to +125°C

Force — 1 oz. to 100 lbs. push, pull, hold

Rated at 100,000 operations  
Built IAW MIL-S-4040 as applicable

## CII Custom High Performance Solenoids (Continued)

### Typical Applications

#### Fin Locking Solenoid

Three of these husky Solenoids are used to lock steering fins in place until the guided weapon is released.

**Voltage** — 22-28 VDC  
**Max. Allowable Current** — Not specified  
**Actuating Force** — 12 to 15.4 lb. (depends on input V)  
**Stroke** — .095"  
**Time On** — Bomb drop time  
**Time Off** — Continuous  
**Cycling Rate** — Not applicable  
**Type Operation** — Pull  
**Temperature Range** — Ambient -65°F to +125°F  
**Coil Connections** — Fluoropolymer Insulation 8" to 8 3/4"  
**Approximate Dimensions** — 2.20" diameter x 2.05" long  
**Type Mounting** — Integral tapped holes  
**Special Environmental Consideration** — Exposure to sand, dust, aircraft oils and fuels, will require an "O" ring seal on plunger.

#### Primer Firing Solenoid

This extremely powerful Solenoid together with its companion pulse control module is designed to fire a standard Military #41 arsenal primer, as part of an advanced mine detection system.

**Voltage** — 26 VDC  
**Max. Allowable Current** — 10.4 Amps @ 26 VDC  
**Actuating Force** — 90 oz. force inches (.64 joules)  
**Stroke** — .38"  
**Time On** — W/pulse control module, 25 ms  
**Time Off** — 3 seconds  
**Cycling Rate** — 20 operations/minute  
**Type Operation** — Push  
**Temperature Range** — Ambient -65°F to +85°F  
**Coil Connections** — Fluoropolymer Insulation #20 stranded 6' long  
**Approximate Dimensions** — 3/4" diameter x 3 1/2" long  
**Type Mounting** — Integral 1/2" - 20 threaded base  
**Special Environmental Consideration** — Sand and dust

#### Aero Medical Valve Solenoid

A scant 3/8" in diameter, this tiny precision Solenoid is capable of 100,000 reliable operations, controlling various airborne gas systems.

**Voltage** — 28 VDC  
**Max. Allowable Current** — .18 Amps @ 28 VDC  
**Actuating Force** — 190 grams @ .030 Amps  
**Stroke** — .030" minimum  
**Time On** — Continuous duty  
**Time Off** — Not specified  
**Cycling Rate** — Not applicable  
**Type Operation** — Pull  
**Temperature Range** — Ambient -65°F to +125°F  
**Coil Connections** — #32 AWG Fluoropolymer Insulation, 24" minimum  
**Approximate Dimensions** — 3/8" diameter x 3/4" long  
**Type Mounting** — None

# 13

CII Solenoids

## CII Custom High Performance Solenoids (Continued)

### Typical Applications (Continued)

#### Fuel Valve Solenoid

This is a unique application in which the Solenoid is mounted inside an aircraft fuel tank submerged in JP-8 jet fuel. The coil is potted, completely fuel proof.

**Voltage** — 115 VAC 400 Hz  
**Actuating Force** — 1 lb. minimum @ 160°F  
**Stroke** — .030"  
**Time On** — Continuous duty rating  
**Time Off** — Not specified  
**Type Operation** — Push  
**Temperature Range** — Ambient -65°F to +160°F  
**Coil Connections** — IAW customer drawing, Fluoropolymer Insulation Leads  
**Approximate Dimensions** — Tubular, 3/4" diameter x 3" long  
**Type Mounting** — Flange IAW customer drawing  
**Special Environmental Consideration** — Coil must be air tight, plunger operates while submerged in JP-8 jet fuel

#### Directional Valve Solenoid

A major valve company selected this rugged type Solenoid to control a directional hydraulic valve in heavy industrial machinery. The valve assembly has a 20 year expected life.

**Voltage** — 92 VDC  
**Max. Allowable Current** — 7.2 Amps inrush, .08 Amps hold  
**Actuating Force** — 30 lbs. minimum  
**Holding Force** — 40 lbs. minimum  
**Stroke** — .500"  
**Time On** — Continuous duty  
**Time Off** — Not applicable  
**Cycling Rate** — Not applicable  
**Type Operation** — Push and hold  
**Temperature Range** — Ambient -55°F to +85°F  
**Coil Connections** — Fluoropolymer Insulation #18 AWG, 72" L  
**Approximate Dimensions** — 2 3/16" dia. x 4 3/16"  
**Type Mounting** — Plate  
**Special Environmental Consideration** — Sand, dust, rain

#### Refueling Release Solenoid

This complex Solenoid with internal current limiting switch is part of an "Air to Air" refueling system.

**Voltage** — 18 to 30 VDC  
**Max. Allowable Current** — 10 Amps/50 ms - 1 Amp continuous holding  
**Actuating Force** — 20 lbs. min. for .10" of initial stroke  
**Holding Force** — Plunger must hold at bottom  
**Stroke** — .17 to .20"  
**Time On** — Continuous duty  
**Time Off** — Not applicable  
**Cycling Rate** — Not applicable  
**Type Operation** — Pull  
**Temperature Range** — Ambient -65°F to +160°F  
**Coil Connections** — Connector MS 302E-10SL-4P per MIL-C-5015  
**Approximate Dimensions** — 2 1/4" dia. x 2 13/16"  
**Type Mounting** — Integral with refueling receptacle  
**Special Environmental Consideration** — High performance aircraft exposure

Power Distribution Units .....14-2

Power Distribution Units

Custom-designed and built AC or DC products for aerospace applications

Key platforms for which we have designed and built PDUs:

- For primary and secondary power distribution
- Various plug-in and bus bar line-replaceable modules (LRMs)
- Installed on a panel mounting system or backplane
- LRMs may be contactors, circuit breakers, sensing units, ELCUs
- Backplanes, designed as a fault-free zone with no moving parts, are intended as a permanent installation on the mother vehicle
- Current/voltage sensing, fuses, circuit breakers, power monitors
- Integrated generator and logic control units
- Compact designs

HARTMAN AC and DC power distribution units (PDUs) and KILOVAC DC PDUs from TE Connectivity are designed, built and qualified to meet your specific requirements.

We have a half-century of experience providing PDUs for the aerospace industry, serving both commercial and military customers.

Allow us to apply our significant expertise in integrating bus-bar and plug-in contactors, relays, sensors, monitors, circuit breakers, shunts, generator control units and other components into compact, lightweight PDUs.

Through our value-added service we can save you time and money in your design and manufacturing processes, as well as the end customers' maintenance programs.

Whether you require innovative modular units or backplane-type panels for fixed wing aircraft or rotorcraft, we can help.

**Custom Primary Power Distribution**

**AC PDUs** — from power distribution panels to line replaceable units—using HARTMAN AC contactors with ratings to 500 amps per phase at 115/200 VAC, 400 Hz

**28 VDC PDUs** — Distribution panels HARTMAN DC bus bar contactors rated to 1000 amps or hermetic contactors rated to 600 amps at 28 VDC

**270 VDC PDUs** — using KILOVAC military/aerospace high-voltage DC contactors rated to 1000 amps continuous current and up to 1000 VDC

**Secondary Power Distribution**

HARTMAN and CII relays and contactors combine for a full range of capability in secondary AC or 28VDC power distribution.

KILOVAC ultra-small high-voltage DC contactors, rated to 150 amps continuous current, allow smaller PDU packages with true flight-rated HVDC hardware.

**Advanced Products for State-of-the-Art Designs**

**Monitoring and Autonomous Trip** — HARTMAN AC Remote Power Controllers (RPCs), Remote Control Circuit Breakers (RCCBs) or Electronic Load Control Units (ELCUs) provide power monitoring and autonomous trip capabilities.

**Ground Fault Sense and Trip Relays and Contactors** — can be added for further protection.

**Hall Effect Current Sensors** — can be integrated into our HARTMAN K series bus bar 28 VDC contactors or used as standalone sensors.

**High-Voltage DC Current Sensing** — KILOVAC KCS series contactors have embedded hall effect sensors for use as overcurrent sense contactors or as remote power controllers with customer-determined time delay on trip.

**Fast Switching** — TE's new KDPC series SSPC, rated at 100 A at 270 VDC, delivers fast switching speed, power protection and long life.

**Complete Packaging** — TE's broad product portfolio enhances our PDU design capability with products from our Raychem wire, cable, tubing, and molded shapes, AMP terminals and connectors, and DEUTSCH 38999 connectors.

**Materials Expertise** — Our capabilities for providing sturdy, lightweight enclosures include both aluminum and TE composites.

270 VDC EDU incorporating KILOVAC MAP series primary and secondary distribution contactors in a compact LRU enclosure

28 VDC secondary distribution PDU using HARTMAN K series contactors, CII FCA Series relays and DEUTSCH connectors

28 VDC primary distribution PDU incorporating HARTMAN K500 bus bar-mount contactors and HECS Hall effect sensors

Primary and secondary 115 VAC, 400 Hz PDU using HARTMAN compact 200 A, 3-phase contactors and CII midrange relays

Sensors .....15-2

## High reliable sensors solutions for harsh environmental conditions

### Applications

- Lightweight, compact single- and multiturn position sensors for Flight Controls
- Resolver for steering position, e-drives, rotary actuation and cockpit controls
- Proximity sensors for cabin & cargo doors, seat positioning
- Force sensor
- Sensor types
- Flap, Slat position sensors
- Door proximity sensor
- Steering feedback sensor
- Hollow Shaft Resolver

Next to a lot of other sensors technologies and applications TE offers a growing range of sensors for the Aerospace, Defense and Marine industry. Our core competence in high reliability sensors for harsh environments such as temperature extremes, RFI, EMI, vibration and lightning

strikes make us a leading choice in sensor technology. We work closely with our customers to provide stable, reliable and cost effective solutions that meet the extensive development cycles and qualifications critical to aerospace, defense and marine.

## Introduction

This index covers all High Performance Group military qualified (QPL) products under the following specifications:

- **CII Hybrid Relays**  
MIL-PRF-28776: Relays, Hybrid, Established Reliability, Low level to 1 Amp
- **CII Electromechanical Relays**  
MIL-PRF-39016: Relays, Electromagnetic, Established Reliability, Low level to 5 Amps  
MIL-R-5757: Relays, Electromagnetic, Low level to 10 Amps  
MS27245: Relays, Electromagnetic, 10 Amps  
MS27247: Relays, Electromagnetic, 10 Amps  
MIL-PRF-83536: Relays, Electromagnetic, Established Reliability, Low level to 25 Amps
- **HARTMAN Contactors**  
MS27750: Relays, Electromagnetic, 50 Amps
- **KILOVAC Vacuum Relays**  
MIL-DLT-83725: Relays, Vacuum, High or Low Voltage Circuits
- **KILOVAC Time Delay Relays**  
MIL-PRF-83726: Relays, Hybrid and Solid State, Time Delay  
(NOTE: QPL STATUS PENDING AT TIME OF CATALOG PRINTING)
- **KILOVAC Solid State Relays**  
MIL-PRF-28750: Relay, Solid State, Hermetically Sealed or Encapsulated  
DSCC 85092: Relay, Solid State, Optically Isolated, Analog Signal Switching  
DSCC 86031: Relay, Solid State, Optically Isolated, 10 Amps  
DSCC 88062: Relay, Solid State, Optically Isolated, 2.1 Amps  
DSCC 89116: Relay, Solid State, Optically Isolated, 0.25 to 1 Amp  
DSCC 90091: Relay, Solid State, Optically Isolated, 1 or 2 Amps

## Military Part Number Example

<b>M</b>	<b>39016/10</b>	<b>-001</b>	<b>L</b>
Military Designator	Specification Sheet Number	Dash Number	Failure Rate Level (see below)

## Failure Rate Designation

Failure Rate Level Designation	Failure Rate Level (Percent per 10,000 cycles)
L	3.0
M	1.0
P	0.1

## Non-Power Switching Applications (Isolation Only)

If your application requires only that the relay carry current, provide voltage isolation, and the power is always removed prior to actuating the relay contacts, then you have a relatively simple task selecting the proper relay based on its voltage isolation and current carry capability.

If there is any possibility that the relay could at some time switch a load, for example in a fault condition, then a load switching relay should be selected. Please review next page to determine which TE relays meet your voltage and current carry needs and then proceed directly to the indicated product page.

### Technical Considerations

When the relay will not be required to power switch, the primary issues to consider are the maximum system voltage and the maximum current the relay must carry. Normally these can be easily determined and, by reviewing the product specifications, the

appropriate relay can be selected.

### Momentary or Pulsed Loads Through Closed Contacts

KILOVAC vacuum and gas-filled relays can handle momentary current pulses much higher than their continuous current rating. The key is to keep the temperature rise of the relay

within safe limits since the normal failure mode in high peak current applications will be either contact welding from very high, very short current pulses or loss of seal integrity of the glass-to-metal, ceramic-to-metal or epoxy-to-metal seals due to excessive heat.

Figure 1. Recommended Relays For High Voltage Isolation (Non-power Switching) Applications

Part Number	Isolation Voltage	Continuous Current	Contact Form	Load Switch*	Peak Current	See Page
MAP100 CAP100	1800 V	90 Amps	A	Yes	600***	7-8, 7-9 7-18 – 7-20

\*In Fault Condition. "Yes" means relay is capable of tolerating some faults.  
 \*\*Pulse, 5ms Duration, Closed Contacts: Failure=Welded Contacts  
 \*\*\*Pulse, 1s Duration, Closed Contacts

## Non-Power Switching Applications (Isolation Only) (Continued)

Therefore, there are two key parameters you must consider in selecting a relay for this type of application. First, refer to Figure 1 for recommended relays and their estimated peak current pulse rating. Second, you must calculate the duty cycle of the pulse to ensure that you will not exceed, on average, the relay's continuous current rating. To calculate duty cycle,

$$\text{Pulse duration (in seconds)} \times \text{pulse rep rate (in cycles per second)} \times 100 = \text{duty cycle (in percent)}$$

The duty cycle times pulse peak current should not exceed the continuous current rating of the relay.

For example: A pulse of 50 amps, lasting 50 milliseconds is passed through the relay every 200 milliseconds. The duty cycle is ...

$$.050 \text{ pulse duration} \times 1 \text{ cycle} / .200 \text{ seconds} = 25\% \text{ duty cycle}$$

The average current is ...

$$25\% \times 50 \text{ amp peak current} = 12.5 \text{ amps continuous}$$

Thus, a relay with a 12.5 amp or greater continuous current rating will be suitable for this application.

### Radio Frequency (RF) Applications

Because of their good insulation qualities and low contact resistance, vacuum relays are quite commonly used in RF applications such as transmitters, antenna couplers, semiconductor processing equipment, and power supplies. However, operating any relay at RF imposes current and voltage limitations. The "skin effect" of RF current on the surface of the conductor creates the current limitation. As frequency is increased, the effective cross-section of the conductor path is decreased, resulting in heating of the conductor surface. This heating limits the maximum current the conductor can carry due to the inherent temperature limitations of the ceramic-to-metal or glass-to-metal seals.

When the relay is used as an insulator, there is RF voltage across the open contacts, or between contacts and ground. For all practical purposes, this insulator has a high voltage capacitance of from 1 to 2 picofarads. The leakage current flowing through this insulator/capacitor results in the heating of the lossy elements of the insulator which, again due to the temperature limitations of the seals, limits the maximum RF voltage that can be handled. In addition, contact gaps simply break down at lower voltages with RF than DC.

These effects make it necessary to derate the current and voltage specifications for operating at RF. Ceramic relays can handle higher RF power than glass relays due to their reduced susceptibility to failure from localized heating; however, both types are commonly used. Many of the KILOVAC relays recommended for RF applications have pure copper contacts for better heat conduction and increased ratings. Because of this, relays in RF applications should normally not be switched under load as a catastrophic failure caused by melting of the relay contacts may occur. If you have an application which requires high frequency power switching, call TE at the numbers listed below.

TE Connectivity offers a wide variety of high voltage relays for RF applications to 32 MHz.

## Non-Power Switching Applications (Isolation Only) (Continued)

Figure 2 shows the typical RF deratings that can be expected when specifying vacuum relays. Specific relay deratings are shown on the product pages. Figure 3 displays the relays recommended for RF applications.

### Typical RF Derating For High Voltage Vacuum Relays

H-23, H-24	30.0 kV	7 Amps	A,B	7-81

## Power Switching Applications

High voltage power switching applications are those which require the relay to make and/or break the load. In most applications, it is important to know the highest potential fault current which could be encountered and how many times the relay or contactor will be required to clear the fault since this will determine the relay or contactor which should be selected.

Load switching in AC circuits is sometimes easier on the relay due to the natural arc extinction which occurs as the current passes through zero. Because of this, relay ratings are usually much higher when switching AC circuit loads.

TE vacuum relays and contactors have been selected for a variety of high reliability space and undersea fiber applications.

Switching of direct current loads creates special problems for relays. Many traditional relays and contactors have difficulty interrupting loads above 48 Vdc. TE has a broad product line of relays, contactors, and power controllers which have been specially designed to handle the problems of DC switching. When load switching must be done at voltages above 1000 volts, refer to the power switching curve on the product data pages or the below graphs for relay families. For specific recommendations, call TE at the numbers listed below.

Higher current affects relay ratings more than higher voltage. There are no hard and fast rules which can be used to develop a relay's electrical life rating given voltage and current switching specifications. Once again, experience and thorough testing in the actual circuit are the best ways to establish relay life and reliability. Figure 4 illustrates the operating characteristic determined experimentally for one family of power switching products.

Figure 4. Typical Hot Switching Resistive load-Life Characteristics K41A, K43A, K81A Relays

Note: Life expectancy for SPDT relays is lower due to greater contact bounce

**Power Switching Applications** (Continued)

**Capacitive Discharge or “Make-Only” Power Switching**

One of the most common applications for high voltage relays is the charge and discharge of a high voltage capacitor. Since this normally involves “make-only” power switching, KILOVAC SF-6 gas-filled relays generally offer superior performance to vacuum relays. In order to select the proper relay, you must determine the peak current and RC time constant in addition to the normal parameters of voltage, contact configuration, etc. The RC time constant is the time it takes for the capacitor to discharge 63% of its stored electrical charge. Virtually all electrical charge will be discharged in 5 RC time constants. The RC time constant is simply the product of the circuit resistance and capacitance. For example, a circuit discharging an 8 microFarad capacitor through 100 ohms of series resistance will have an RC time constant of 800 microseconds.

$$(R \times C) = 100 \times .000008 = .0008 \text{ or } 800 \text{ microseconds}$$

It is often difficult to specify the proper relay for capacitive discharge applications because of the many potential variables. It is especially important in these applications to conduct tests to determine which relays are suitable and their reliability.

Figure 5 below is based on “rules of thumb” and actual circuit data. If your application differs significantly from those shown in the figure, contact your local Tyco Electronic sales engineer.

**Figure 5. Recommended Relays for Capacitive Discharge Applications at Rated Voltage**

Part Number	Rated Voltage	Contact Form	Peak Current 500 ns RC Time	Peak Current 500 μs RC Time	Peak Current 1 ms RC Time	See Page
HC-5	3.5 kV	C	50 A	25 A	5 A	7-58
KM-17	5.5 kV	2C	150 A	75 A	35 A	7-62
HC-6	8.0 kV	C	50 A	25 A	5 A	7-64
KC-15, 16	15.0 kV	C	200 A	100 A	10 A	7-75
KC-28, 38	25.0 kV	X,Y	1500 A	1000 A	400 A	7-80
K61 Series	35.0 kV	A,B,C	500 A	250 A	125 A	7-82
K64C	50.0 kV	C	400 A	200 A	100 A	7-85
K70 Series	70.0 kV	A,B,C	350 A	175 A	90 A	7-86

**Note:** Relay life can be expected to be in excess of 100,000 cycles at these load levels. This chart is intended to serve as a general guide only. We recommend you test the relay in your circuit to confirm its suitability.

Figure 6a

Figure 6b

Figure 6c

**Failure Modes in Capacitive Discharge Switching**

There are two possible failure modes in capacitive discharge switching: contact welding and shortened load life. Both are due to excessive contact heating from high peak currents and/or long RC times. Therefore, we often recommend that customers either reduce the capacitance or increase the resistance of their circuit to improve relay performance.

**Direct Current Power Switching**

Vacuum and hydrogen gas filled relays and contactors are being selected more and more often for use in direct current electrical systems. Switching a direct current load is one of the toughest tasks a relay can be asked to perform. Many times the relay or contactor will also be called upon to clear the maximum fault current, often several times higher than the normal load. Unlike AC power, where both voltage and current regularly pass through zero allowing the arc formed during switching to naturally extinguish, a DC load can only be interrupted by forcing the arc voltage higher than the source voltage. A number of schemes are commonly used to increase the arc voltage, ranging from arc chutes or multiple contacts to magnetic blowout, which lengthens the arc path.

The TE power switching relays are designed to interrupt rated power as supplied. However, reactive inductive loads can result in significant voltage overshoot in some applications. Voltage overshoot can be suppressed by a variety of measures.

Figure 6a, b, and c show three methods used to limit the voltage transient developed across the relay contacts when interrupting inductive loads. The same circuits impressed across the load will protect it from voltage overshoot:

- Figure 6a shows a Metal Oxide Varistor (MOV) across the power contacts. We recommend this circuit for most general purpose applications and suggests the user consult MOV manufacturers application notes since the proper MOV selection depends on transient energy, etc. MOV's are compact in size and low in cost.

TE offers a wide variety of relays and contactors for power switching applications.

## Power Switching Applications (Continued)

- Figure 6b indicates an MOV in series with an SVP (Surge Voltage Protector — spark gap). The MOV absorbs transient overshoot energy, the SVP provides excellent dielectric once the circuit is open. This solution is also compact in size and low cost.
- Figure 6c illustrates the traditional RC Snubber. The snubber will suffice for low power and energy situations, but suffers a size and cost penalty at high power.

KILOVAC vacuum, hydrogen and nitrogen gas-filled “super sealed” relays have some significant inherent advantages in switching high current DC loads. These include:

- Longer load life due to ability to use high temperature contact materials
- Low contact resistance due to the elimination of contact oxidation/contamination
- Lighter weight and smaller size due to smaller contacts and shorter contact gaps
- Low coil power due to optimized magnetic circuits and small size
- High integrity, durable ceramic to metal hermetic seals

Today, the TE products have been rated at 320 Vdc since this is the most common voltage being adopted by many new applications. However, the new products are versatile, encompassing a wide range of power, voltage, and current applications.

**For detailed application notes on EV relays, contact TE to request a copy of the TE EVS-13 paper entitled, “Use of High Current Relays in Electric and Hybrid Electric Vehicles”.**

### Double Throw Power Switching

Double throw relays like the TE PD5C are used in a variety of “hot” or “power” switching applications, and they generally work fine. However, many application problems can be avoided by verifying that the relay was tested with the polarity and load conditions exactly like the application. In the aerospace industry, it is generally well known that switching un-synchronized AC loads is not recommended (see Figure 7a).

Figure 7a. Un-synchronized AC Loads — Generally not recommended

We found another application that took our experts some time to troubleshoot. This application required the charging and discharging of a capacitor. The double throw relay was used to switch a capacitor, which was in series with a resistor, between the plus and minus of the power source (see Figure 7b.).

Figure 7b. Improper placement of resistor for power switching

But when the relay was used to discharge the capacitor, an arc occurred as the plus side of the load was interrupted, and an arc with full power system potential followed the moving contact to the minus side of the power source, thereby causing a short. To remedy the problem, the resistor was removed from the moving contact, and resistors were installed on both the plus and minus sides of the power source (see Figure 7c).

Figure 7c. Proper placement of resistor for power switching

This reduced the current, and therefore eliminated the arc fault during contact transfer. TE tests all of our hot switching relays with the positive polarity on the common contact, unless otherwise requested. The application above, and others that may involve switching between two power sources, require special testing to confirm a workable circuit design.

### 270 Vdc Aerospace Relays, and Contactors

With the need for more power, less weight and the desire to eliminate unreliable hydraulic systems, next generation military aircraft, ground, and sea vehicles have moved to 270 Vdc as the primary power. One of the reasons it has taken so long for 270Vdc to be used in these systems is that there were no relays or circuit breakers that could handle this new higher dc voltage. We have solved this problem.

Since 1987, TE has invested substantial time and effort in developing products that can switch direct current 270Vdc loads. Today TE has the largest selection of aerospace products available for these applications with load ratings from milliamps to 350A, continuous current carry to 800A, and overload rating to 3000A. These relays and contactors can be used at voltages ranging from 28 to 400Vdc. These ratings have been extrapolated and plotted onto graphs which are shown on the individual product data sheets.

In addition, we have the resources necessary to work directly with you in developing a new product or modifying an existing product to meet your specific application’s requirements. TE recommends that you contact your local sales engineer for specific rating information-for higher voltage applications.

**Power Switching Applications** (Continued)

**Figure 8. Recommended Relays for D.C. Power Switching Aerospace Applications**

Part Number	Contact Form	Load Rating @ 270 Vdc	Continuous Current Carry	Overload Rating @ 270 Vdc	See Page

\*SPST-NO, latching version available, contact TE for more information.

**270 Vdc Aerospace Relay and Contactor Reliability**

In order to allow customers to select the desired failure rate for TE’s power switching devices, and determine the appropriate life rating and vice-versa, TE has created a series of curves showing the failure rate vs rated life. These curves have been generated using the results from Weibull analysis. The use of the Weibull distribution to predict product reliability from life test data has been shown to be an accurate and effective method when applied to TE’ electromechanical devices. As an example, the following graph shows the hot switch life estimate for EV200 contactors:

**Failure Rate vs. Rated Resistive Load Life at 90 A, 270 Vdc**

\*Failure rate letter designations per MIL-STD-690

**Contact TE for more information on the following:**

- Reliability data for other 270 Vdc KILOVAC contactors and relays.
- Methodology using Weibull analysis; ask for TE Engineering Report No.415, “Determination of Failure Rate Curve from Weibull Data”.
- Correlation between Weibull analysis and traditional reliability methods; ask for TE Paper “Correlation Between Weibull Analysis and Traditional Reliability Methods”.

**270 Vdc Aerospace Remote Power Controllers (RPCs)**

The TE high voltage DC power contactors can be coupled with our custom designed CED1034 electronic control circuit to provide the remote power controller function. The controller performs the circuit protection function by monitoring the load current via a low resistance, precision temperature compensated resistor. An overload has priority over all control functions. The trip characteristic graphically illustrates the typical trip envelope with trip time as a function of overload current. The trip envelope can be tailored to meet specific customer requirements.

## Test Equipment for HARTMAN Relays and Contactors

### VIBRATION TEST EQUIPMENT

**Vibration Control:**

Spectral Dynamics PUMA Vibration Control System; Auto/Manual operation; Sine, 1 – 5000Hz; Random, 50 – 20,000Hz; Shock Pulse: half-sine, sawtooth, trapezoidal, rectangular; Accuracy: ± 1 dB (with 120 Dof), calibration frequency: 6 months.

**Power Amplifier:**

Unholtz-Dickie, model: TA-115, range: 16 KVA output power, calibration frequency: 6 months.

**Shaker:**

Unholtz-Dickie, model: TC-205, 4,000 lbs. pk. force sine 3,300 lbs. force RDM 1 inch pk. stroke, frequency range 5-3,000 Hz.

**Slip Table:**

Mitron.

**Charge Amplifier:**

Unholtz-Dickie, model: D22PMJO, range: 1/10/100 mv/pk.g., 0-10 kHz., 0 to 1,000 g, accuracy: ± 2%, calibration frequency: 6 months, P/N- SN5103

### CHAMBERS

**Temperature Chamber:**

Thermotron, model S-1.2, range –73°C to +175°C (3 units)

**Temperature/Altitude Chamber:**

Envirotronics, Model EA27-2-5-WC, temperature range: -68°C to +177°C ± 1.1°C, altitude range 0 – 100,000 feet.

**Temperature Chamber:**

Envirotronics, Model EVS 37-2-30, range -73°C to +177°C accuracy ± 1.0°C, calibration frequency 6 months; capable of 30°C/minute maximum change rate.

**Humidity/Temperature Chamber**

Thermotron Model SM 5.5C range –68°C to 177°C ±1.1°C, relative humidity 20% to 95%, ±2.5%RH

### GENERATORS

**AC Generator:**

Ideal, 300 KVA, 3 phase, 4 wire, 400 Hz., 208/120 volts. 415/240 – 450/260 volts

**AC Generator:**

Kato Engineering, 30 KVA, 3 phase, 4 wire, 400 Hz., 208/120 volts.

**Other Capabilities:**

Voltage, Current and Power Sensing  
 Over and Reverse Current  
 Over and Under Voltage  
 Over and Under Frequency  
 Ground Fault and Detection  
 Phase Sequence, Unbalance and Failure  
 Positive, Negative and Zero Sequence Voltage  
 Impedance Relays  
 Ripple Detection

Signal Amplification  
 Time Delay  
 Turbine Starting  
 Trip-Free, Electrical and Mechanical Interlocking  
 Electrical and Magnetic Latching  
 Polarization  
 Power Switching

## Typical KILOVAC Relay Applications

### Predicting Reliability by Weibull Plotting

TE uses Weibull plotting to predict product reliability. Weibull plotting is a simple and efficient way to predict reliability from a small number of life tests and it is widely used for this purpose. At least five and preferably seven or more samples are tested to failure. The cumulative percent failure is plotted against life on Weibull paper. The scales of Weibull paper are designed so the failure data of a wide variety of manufactured devices will tend to lie in a straight line. As the chart above shows, this data can then be interpreted to estimate the likelihood of failure at a given life. If you would like more information on this valuable technique, contact TE and request "Weibull Plotting," TE Engineering Report #219.

### PC Board Mount Relays

TE' K81 series of relays offer designers the flexibility of printed circuit board mounting. High voltage relay connections are directly on the board or to high voltage flying leads. With a new rating of 10 kV and capable of carrying 10 amps, the K81 series can serve a wide range of high voltage applications. Failsafe, latching, and SPDT versions are available and we will be happy to provide special terminations on request.

Figure 9 shows the predicted life of K81 series relays making and breaking a resistive load. Since circuit conditions vary widely, this information should be considered a general guide only. Please contact your TE sales engineer with your design requirements.

Figure 9. Typical Hot Switching Resistive Load-in Characteristics K41A, K43A, K81A Relays

**Note:** Life expectancy for SPDT relays is lower due to contact bounce

## Typical KILOVAC Relay Applications (Continued)

### Test Equipment Applications

Test equipment applications, by their very nature, tend to impose difficult requirements on relays. The overall criterion is for reliable, repeatable, and consistent results. Without this, no piece of test equipment can be considered usable.

TE relays have some special characteristics which contribute to their wide application in test equipment.

1. The relay contacts are in a controlled environment. Dust, humidity, or infrequent use will not affect the relay's performance.
2. KILOVAC vacuum relays have extremely low and stable contact resistance since oxides cannot form on the contacts. Even when load switching, contact resistance will vary within a very narrow range.
3. Since they are designed for high voltage isolation, KILOVAC relays offer extremely high insulation resistance and very low current leakage. This is an advantage in many switching matrices where these values must be kept as low and repeatable as possible.

TE high voltage relays are used in many in-house test equipment applications as well as OEM applications. For example:

- Hipot Testing
- Test Sets
- Motor/Generator Test Sets
- Cable Testing
- Capacitor Testing
- Electrostatic Discharge (ESD) Testing
- Relay Test Equipment
- Power Supply Test Equipment

### High Insulation Resistance Applications

Both vacuum and gas-filled relays are often used in applications, particularly test equipment, which require very high insulation resistance due to the sensitivity of the measurements being conducted. Standard KILOVAC relays often have sufficiently high insulation resistance for many applications and other KILOVAC relays can be modified to meet special insulation resistance requirements upon request. The chart below shows the typical insulation resistance of standard KILOVAC relays. If you have an application that requires a high insulation resistance relay, call TE at the numbers listed below and tell us of your requirement.

**Figure 10. Recommended Relays for High Insulation Resistance Applications**

Part Number	Rated Voltage	Contact Form	Contact to Case Insulation Resistance*		Contact to Contact Insulation Resistance*	
			@ 1000 Volts	@ Rated Voltage	@ 1000 Volts	@ Rated Voltage
HC-1 Series	3.5 kV	C	9.5 x 10 <sup>13</sup>	1.5 x 10 <sup>12</sup>	2.5 x 10 <sup>13</sup>	3.6 x 10 <sup>13</sup>
K41 Series	5.0 kV	A,B,C,P,R	2.4 x 10 <sup>13</sup>	3.2 x 10 <sup>13</sup>	7.0 x 10 <sup>12</sup>	7.5 x 10 <sup>12</sup>
K44 Series	8.0 kV	P	1.4x 10 <sup>14</sup>	1.6 x 10 <sup>13</sup>	3.3 x 10 <sup>13</sup>	3.8 x 10 <sup>13</sup>
K43 Series	10.0 kV	A,B,C,P,R	2.4 x 10 <sup>13</sup>	4.4 x 10 <sup>13</sup>	9.0 x 10 <sup>12</sup>	1.5 x 10 <sup>11</sup>
K81 Series	10.0 kV	A,B,C	N/A	N/A	5.7 x 10 <sup>13</sup>	7.0 x 10 <sup>13</sup>
KC-2 Series	15.0 kV	C	3.1 x 10 <sup>13</sup>	3.5 x 10 <sup>12</sup>	3.8 x 10 <sup>14</sup>	5.8 x 10 <sup>13</sup>

\* Typical values; measured In ohms

**Note:** Measurement of insulation resistance requires strict control of the test environment. Contact TE for more information.

### Typical KILOVAC Relay Applications (Continued)

#### Relays with Special Modifications and Power Distribution Units

TE routinely develops KILOVAC relays with special modifications for customers. These modifications can include:

- contact arrangement
- operating voltage
- pickup or dropout voltage
- operate time
- mounting style or method
- coil voltage
- high voltage terminations
- coil terminations
- markings

#### Customized Lightweight Power Distribution Units

- For primary and secondary power distribution
- Modular systems consist of various plug-in and bus bar line-replaceable modules (LRMs) installed on a panel mounting system or backplane
- LRMs may be contactors, circuit breakers, sensing units, ELCUs, etc.
- Backplanes, designed as a fault-free zone with no moving parts, are intended as a permanent installation on the mother vehicle
- Optional current/voltage sensing, fuses, circuit breakers, power monitors, etc.
- Weight-saving and space-saving designs reduce OEM labor requirements and easy maintenance
- Optional integration of generator control units and logic control units

PDU featuring bus bar mount 270 Vdc DC contactors.

In addition, TE can take a standard relay or several relays and package them to your specifications. By packaging components and subassemblies with the relays, as demonstrated in Figure 16, the handling and installation of the product during manufacturing and field service can be greatly simplified. In this case, four high frequency inductive filters and special quick-connect cable assemblies of the correct length have been assembled with the relay. Then the whole assembly has been encapsulated for ease of handling and mounting.

Contact the TE sales engineer in your area to review your special requirements and establish a special part number which identifies your relay's unique characteristics.

A number of modifications can be made to KILOVAC relays so they will operate faster than the catalog specifications, consume less power, and function reliably at elevated temperatures. In addition, high voltage relay users should be familiar with high voltage processing techniques, high voltage connectors available by special order, and when to be concerned about radiation exposure. The following chapter covers these topics, and more.

### Improving Relay Operate Time

## Relay Application Notes

There are a number of methods which can be used to substantially improve relay operate time over the standard specification. Operate times of one millisecond or less can sometimes be achieved.

Our definition of operate time is “the interval between the application of the nominal coil voltage and closing of all normally open contacts (or opening of all normally closed contacts).” This includes:

1. Time for the coil to build up the magnetic field.
2. Transfer time of the moveable contact.
3. Bounce time after the initial make or break.

Operate time is basically a function of the coil power and inductance. More than half of the switching time is necessary simply to build up the coil field, thus; the basic scheme for reducing operate time is to apply more voltage to the coil. This can be accomplished by overdriving the coil with a higher than nominal voltage directly from your supply. To prevent overheating, the coil voltage should be reduced to the nominal value shortly after the relay operates or a resistor equal to or greater in value than the coil resistance should be placed in series with the coil to keep total power applied at the specified level (See Figure 11). Doubling the nominal voltage and adding an external resistor equal to the coil resistance can reduce the operate time up to roughly 40%.

Figure 11. Over Voltage Method of Reducing Operate Time

Figure 12. Recommended Relays for Fast Switching Applications

Part Number	Rated Voltage	Contact Form	Operate Time Specifications (Typical Time)*	Operate Time with “Hot Shot” Circuit*	See Page
HC-1, HC-3	3.5 kV	C	6 (2.5)	2.0	7-58
K41P	5.0 kV	P	6 (2.7)	2.3	7-60
K40P	5.0 kV	P	1 (0.75)	0.6	7-61
K44P	8.0 kV	P	5 (2.5)	2.2	7-66
HC-2, 4, 6	8.0 kV	C	6 (2.5)	2.0	7-64
K43P	10.0 kV	P	5 (3.0)	2.9	7-70

\*Time is in milliseconds.

## Relay Application Notes (Continued)

### Calculating Pull-in and Drop-out Voltages at High or Low Temperatures

Most of our specifications are for a 25°C ambient temperature. However, a well known phenomena of electrical circuits is the rise in resistance of a current path as temperature is increased. The temperature rise may be caused by current flow or by changes in ambient temperature, but the effect in either case is increased resistance. Therefore, you can expect coil resistance, pull-in, and drop-out values to change over the operating temperature range of the relay.

Figure 13. Change in Pull-In Voltage Over Temperature

The coil resistance ( $R_t$ ) after a specific temperature rise ( $\Delta T$ ) is calculated using the formula:

$$R_t = R_{25^\circ\text{C}} (1 + .003853 \Delta T)$$

where:

$R_t$  = New resistance at elevated temperature

$R_{25^\circ\text{C}}$  = Coil resistance at room temperature (25°C)

$\Delta T$  = Rise in temperature from 25°C

Pick-up voltage varies directly with the change in coil resistance caused by a change in temperature. The basis for this is Ohms Law:

$$E/I = R$$

Since a relay coil is a current-driven device, as the coil resistance varies with temperature, so must the pick-up voltage ( $I=V/R$ ). Thus, the same formula we used above to calculate the change in resistance with a change in temperature can be used to calculate pick-up voltage by substituting pick-up voltage for resistance. For example, assume that you have selected a relay that has a maximum pick-up voltage of 16 Vdc at 25°C, a standard value for a relay with a 26.5 Vdc coil, and you want to operate it in a 85°C environment. Using the formula, we find:

$$V_t = 16 \text{ Vdc} (1 + .003853 \times 60^\circ\text{C}) = 19.7 \text{ Vdc}$$

If the ambient temperature is raised to 100°C, the new pick-up voltage will be:

$$V_t = 16 \text{ Vdc} (1 + .003853 \times 75) = 20.6 \text{ Vdc}$$

If the power supply you are using is rated at 20 Vdc, the relay would operate in an 85°C environment but not in a 100°C environment.

This same formula works for a decrease in temperature. For instance, at -25°C the pick-up voltage will drop to 12.9 Vdc, as follows:

$$V_t = 16 \text{ Vdc} (1 + .003853 \times -50) = 12.9 \text{ Vdc}$$

If you want your circuit to operate properly over its entire temperature range, it is essential that you make the necessary calculations to ensure that the available voltage exceeds the temperature-adjusted relay specification.

## Relay Application Notes (Continued)

### Suppressing Relay Coil Transients

When a 28 Vdc relay coil is turned off, the inductive energy stored in it can create surge voltages to 1500 volts on a DC power line. With the increased use of solid state devices which are sensitive to spikes, relay coils must be suppressed to limit voltage spikes to a maximum of 50 to 80 volts.

The measure of successful coil suppression depends on the degree to which the method affects the operation of the relay. Improper or excessive suppression can cause the relay to suffer from a long release time, slow contact transfer, and contact bounce on break. All of these conditions will increase contact arcing when load switching, which will reduce relay life dramatically.

There are a number of common ways for a relay user to suppress relay coil transients and each has advantages and disadvantages. However, the most widely used methods utilize zener-diode and/or zener-zener combinations. These combinations are compact, provide excellent suppression, and do not affect relay release-time or contact life. Figure 14 illustrates some of the more common configurations.

17

### Radiation Exposure at High Voltage; Is it A Problem?

High voltage vacuum relays, like any high voltage component, can potentially produce hazardous X-rays when operated above 15 kV. However, KILOVAC gas-filled high voltage relays can be operated safely at very high voltages without any concern for X-rays. Gas-filled relays cannot produce X-rays because the electrons collide with the gas molecules and are unable to accumulate sufficient energy to make significant radiation.

Many KILOVAC relays rated for use above 15 kV are gas-filled relays and, whenever possible, we recommend you use one of these. If a vacuum relay must be used, then it, or the equipment it's in, should be shielded with lead which is at least .062 inches thick. If shielding is not possible, then appropriate warnings of the potential for X-ray exposure must be posted and a radiation monitoring program implemented. Contact your local health agency for more information.

## Relay Application Notes (Continued)

---

### Power Conservation Schemes

Quite often in space, aircraft, or battery operated applications it is important to minimize relay power consumption either to conserve power or to minimize heating. TE offers three ways to help you reduce the power which must be dedicated to supply the relays.

1. Use a latching relay. Latching relays need only to be pulsed to switch. Power can be removed and the relay will maintain its latched position. If a normally open or normally closed relay must be used, TE has developed a custom hybrid circuit which allows a latching relay to function as a non-latching relay.
2. If a latching relay is not available for your application, TE may be able to incorporate an "energy conserving" circuit in your relay package. This circuit regulates the power provided to the coil, providing full power during relay operation and providing a reduced power level which is adequate for holding the relay contacts in position at other times. An energy conserving circuit such as this must be custom designed for each application and each model relay. Contact the your local TE sales engineer for more information.
3. For failsafe contactors, TE offers electronic economizers for reducing coil power once the contacts are closed. These schemes result in more energetic activation, smaller size contactors, and substantially reduced coil temperature rise.

### High Voltage Processing of Vacuum Relays

Although the shelf life of vacuum relays is typically many years, occasionally a relay will show signs of "gassiness" after a relatively short period of non-use. A trace of gas released from its adsorbed state on the internal surface of the relay is usually responsible. Fortunately, this trace can normally be eliminated by the use of the high voltage processing procedure de-scribed below. The need for such processing can be readily determined by a simple, high voltage test just before installing the component in a system, which is good practice for any high voltage component. **It is not necessary to high voltage process gas-filled relays.**

### High Voltage Process Procedure

1. Connect a variable high voltage AC or DC power supply in series with a 10 megohm resistor, a micrometer, and the relay (with the relay on the ground side of the power supply).
  - SPST-NO relay:** Process between open contacts.
  - SPST-NC relay:** Ground the base, energize the coil, and process between open contacts.
  - SPDT relay:** Connect the base and the NO terminal together, ground the base, and process between open contacts with the coil energized and de-energized.
  - DPDT relay:** Process each set of contacts in the same manner suggested for a SPDT relay.
2. Immerse the relay in a dielectric fluid for processing. Transformer oil can be used but FLUORINERT FC-77 is cleaner since it evaporates quickly from the relay surface.
3. Raise the voltage slowly. If the peak voltage is made equal to the maximum specified test voltage and less than 5 microamps of current is drawn at this level (or no glow is visible in a darkened room), then the vacuum is "hard" and no further processing is necessary.
4. If a glow occurs at a lower than maximum specified test voltage, hold the voltage just above the glow initiation level until the glow disappears; raise the voltage again to the onset of glow, or until the maximum specified test voltage is reached. If a DC supply is used, reverse the polarity and repeat the process.
5. Processing at levels up to 20% above the maximum specified test voltage may be done. Typical processing times range from one minute to several minutes for very high voltage relays.

**WARNING:** X-rays are produced during high voltage processing at voltages above 15 kV. See page 16-15 in this catalog for information on the precautions you should take when operating vacuum relays above 15 kV.

FLUORINERT is a trademark of 3M.

## Common KILOVAC High Voltage Relay Designs

### Hinged Armature Design

This traditional design approach provides high mechanical reliability and is adaptable to a number of contact configurations. The contact is actuated by the movement of the spring-loaded armature when the coil is energized. The coil assembly is external to the vacuum package and readily replaceable.

Figure 11

### Diaphragm Design

This simple, low-cost design approach makes use of a thin molybdenum diaphragm which allows contact movement to be transferred into the vacuum package from the external motor assembly. This basic design is used in a large number of Kilovac products.

Figure 12

### Solenoid Design

When high current loads must be interrupted, the solenoid design provides the force necessary to separate large contacts quickly. It also provides high contact holding force to keep contact resistance low. These attributes make this design the choice for high current DC load switching relays and contactors.

Kilovac's Patented Relay Design

Figure 13.

### Definition of Specifications

#### Bounce Time

The time interval between when the contact first makes, and when the last contact make occurs.

#### Coil Hi Pot

The minimum voltage which the relay coil terminals will isolate when the relay is properly mounted.

#### Coil Resistance

The DC resistance, in ohms, of the coil at 25°C.

#### Contact Arrangement

Contact arrangements of relays may be one or a combination of the following:

- single pole single throw (SPST)
- single pole double throw (SPDT)
- double pole single throw (DPST)
- double pole double throw (DPDT)
- 3 pole single throw (3PST)
- 3 pole double throw (3PDT)
- four pole double throw (4PDT)

#### Contact Capacitance

Contact capacitance is measured either between open contacts or between contacts and ground. Measurements are made per MIL-STD-202, Method 305, at 1 kHz.

#### Contact Form

The contact form of relays may be one or a combination of the following (see page 16-20):

- Form A: SPST - Normally Open
- Form 3A: 3PST - Normally Open
- Form B: SPST - Normally Closed
- Form C: SPDT
- Form 2C: DPDT
- Form 3C: 3PDT
- Form 4C: 4PDT
- Form K: SPDT Center Off
- Form P: SPST - Latching
- Form R: SPDT - Latching
- Form 3R: 3PDT - Latching
- Form X: SPST-NO-Double Make
- Form Y: SPST-NC-Double Break
- Form Z: SPST NO and SPST NC  
Double Break/Make
- Form ZZ: DPST NO and DPST NC  
Double Break/Make

#### Contact Resistance

In vacuum relays, the resistance of closed contacts is measured as voltage drop across contacts carrying 1 amp at 6 Vdc. Measurement is made in accordance with MIL-R-83725, SAE ARD 50031, or MIL-R-6016. In gas-filled relays, 1 amp at 28 Vdc is used to measure contact resistance. "Kelvin" connections should be used to obtain accurate readings.

#### Contact Voltage Drop

Contact voltage drop is typically measured with the contacts carrying rated current. Measurements are made at the external terminals of the circuit being tested.

#### Continuous Current

The maximum current that can be carried by the closed contacts of the relay for a sustained time period through the specified operating temperature range.

#### Dielectric Strength

The maximum allowable Ac rms voltage (50 or 60 Hz) which may be applied between two test points, such as the coil and case or current carrying and non-current carrying points, without a leakage current in excess of 1 milliamp.

#### Drop-out Voltage

The voltage at which all contacts return to their "normal", unoperated positions. (Applicable only to non-latching relays.) Unless otherwise noted, maximum drop-out voltage is specified during a continuous current test with a hot coil at maximum temperature. Minimum drop-out voltage is done at minimum temperature.

#### Insulation Resistance

The minimum allowable DC resistance between two test points, such as the relay contacts and the coil, or contacts and case at a specified voltage, usually 500 Vdc.

#### Hold Voltage

The lowest voltage that can be applied without any change in state of the contacts from their energized position. This is just above the maximum drop-out voltage.

#### Leakage Current

The rms current conducted by the output circuit of the relay at maximum rated voltage with the contacts open.

#### Load Life

The minimum number of cycles the relay will make, carry, and break the specified load without contact sticking or welding, and without exceeding the electrical specifications of the device. Load life is verified through qualification testing.

#### Load Life, Rated Resistive

The voltage and current encountered by the contacts when opening and/or closing. To be considered a resistive load, the inductance in the test circuit shall not exceed an L/R ratio of  $1 \times 10^{-4}$ . Load ratings are established using various methods including Weibull analysis.

#### Mechanical Life

This is the number of operations which a relay can be expected to perform while maintaining mechanical integrity. Mechanical life is normally tested with no load or voltage applied to the power contacts and is verified through qualification testing.

## Definition of Specifications (Continued)

### Operating Temperature Range

The ambient temperature range over which an unmounted relay is specified to operate.

### Operate Time

The time interval between the coil energization (nominal coil voltage) and the closing of the normally open contacts. This includes time for the coil to build up its magnetic field (a significant limiting factor) and transfer time of the moveable contact between stationary contact(s), and bounce time after the initial contact make. All KILOVAC relays, except "AP" and "PD" power switching products include bounce time.

### Overload

The maximum current the relay can make and break for the specified number of operations at the maximum system voltage without contact welding, sticking, or blowing of a 1 amp fuse connected between the case and load system ground.

### Pick-Up Voltage

The voltage at which normally open contacts close and/or normally closed contacts open. Pick-up voltage increases as coil temperature rises. Unless otherwise specified, pick-up voltage is specified during a continuous current test with a hot coil at maximum temperature.

### Release Time

The time interval between de-energizing of the coil and the relay returning to normal de-energized position.

### Shock

Shock tests determine what acceleration a relay can sustain without normally closed contacts opening or normally open contacts closing. The shock pulse is typically an 11 millisecond, 1/2 sine pulse. Contacts are monitored for chatter in excess of 10 microseconds and no transfer.

### Vibration

The maximum acceleration over the frequency range which the relay can withstand without impairing operation or causing contact chatter of more than 10 microseconds or contact transfer.

**Engineering Notes**

---

A large grid of graph paper for taking engineering notes. The grid consists of 30 columns and 40 rows of small squares, providing a structured area for technical drawings or calculations.

## X-ON Electronics

Largest Supplier of Electrical and Electronic Components
