Key Features

AEC-Q200 Qualified

Thin film technology

Excellent overall stability

Sn termination on Ni barrier layer

Tight tolerance down to ±0.1%

Extremely low TCR down to ±10 PPM/°C

SMD enabled structure

Lead-free and RoHS compliant

Applications

Automotive (Non-safety parts)

Industrial

Telecommunication

Medical Equipment

Measurement/Testing Equipment

Type SMA-A series

The SMA-A series is a metal film precision MELF resistor with an SMD enabled structure tight tolerance and low TCR. A sister to our SMA series the SMA-A series is AEC-Q200 qualified

It comes in three sizes and six power ratings to 1W, is lead free and RoHS compliant.

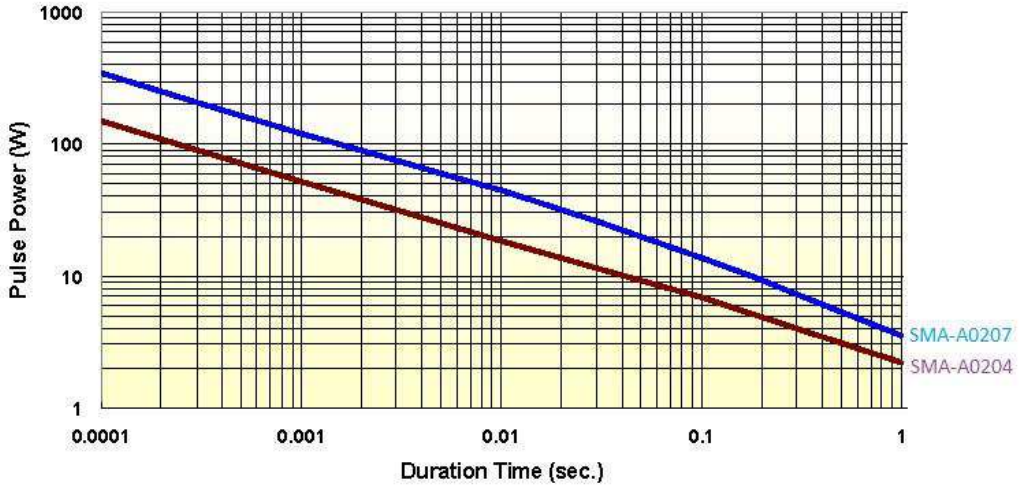
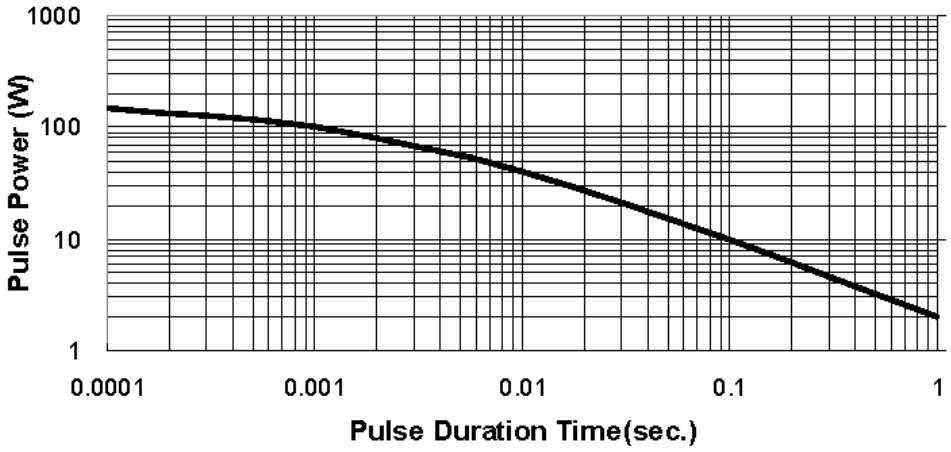
Pulse withstanding capacity

The single impulse graph is the result of 50 impulses of rectangular shape applied at one-minute intervals. The limit of acceptance was a shift in resistance of less than 1% from the initial value. The power applied was subject to the restrictions of the maximum permissible impulse voltage graph shown

SMA-A Series Single Pulse(100 Ohm)



SMA-A0102 Series Single Pulse



Continuous Pulse

The continuous load graph was obtained by applying repetitive rectangular pulses where the pulse period was adjusted so that the average power dissipated in the resistor was equal to its rated power at 70°C. Again the limit of acceptance was a shift in resistance of less than 1% from the initial value

Frequency behaviour

Resistors are designed to function according to ohmic laws. This is basically true of resistors for frequencies up to 100kHz. At higher frequencies, there is an additional contribution to the impedance by an ideal resistor switched in series with a coil and both switched parallel to a capacitor. The values of the capacitance and inductance are mainly determined by the dimensions of the terminations and the conductive path length.

The environment surrounding components has a large influence on the behaviour of the component on the printed-circuit board.

Lightning Surge

Resistors are tested in accordance with IEC 60115-1 using both 1.2/50us and 10/700us pulse shapes. The limit of acceptance is a shift in resistance of less than 0.5% from the initial value.
