## KILOVAC WD Series, DIN Rail or Screw Mounted Protective Relays

### Product Facts

- WD25 Paralleling (Synch Check) Relays
- WD2759 Over/undervoltage Relays
- WD32 Reverse Power Relays
- WD47 Phase Sequence Relays
- WD5051 Single- or Three-Phase Overcurrent Relays
- WD810U Over/Underfrequency Relays
- File E58048, DIN EN50022-35

The WD series offers several different models of protective relays in a common package that is suitable for either DIN rail or screw mounting. These flexible, multifunction devices offer user selectable voltages, sense currents and frequencies. Adjustable time delays are standard. This allows a single part number to be suitable for multiple applications, thereby reducing inventory costs.

### Specifications Common to All Models

**Power Consumption** — 2.5VA, maximum.

**Contact Ratings** — 5 amps, resistive, at 120VAC.  
5 amps, resistive, at 30VDC.

**Isolation from Control to Sense Inputs** — 2,500VAC.

**Mechanical Life** — 10 million operations.

**Shock** — 10g.

**Vibration** — 0.062 (1.57) double amplitude at 10-55 Hz.

**Terminals** — M3.5 screws.

**Maximum Wire Size** — 2 x 24 AWG (2.5mm<sup>2</sup>) solid to DIN 46288 or 2 x 16 AWG (1.5mm<sup>2</sup>) stranded w/end sleeves.

**Operating Temperature Range** — -40°C to +60°C.

**Enclosure** — Plastic case (not sealed).

**Mounting Options** — Snap mounts on standard DIN rail (DIN-EN 50022-35) or panel mounts with M4, M5, #8 or #10 screws.

**Weight** — 14.4 oz. (400g) approximately.

Users should thoroughly review the technical data before selecting a product part number. It is recommended that user also seek out the pertinent approvals files of the agencies/laboratories and review them to ensure the product meets the requirements for a given application.

### Installation and Maintenance Information

**Installation** — To mount the WD series protective relay on a DIN rail, hook the top edge of the cutout on the base of the case over one edge of the DIN rail, then press the opposite side of the cutout containing the release clip over the opposite side of the DIN rail. To remove or reposition the relay, lever the release clip and move the relay as required. WD series relays should be installed in a dry location where the ambient temperature will be within the operating temperature range.

**Maintenance** — WD series protective relays are solid state devices that require no maintenance. They are not designed to be serviced by the user. Consult KILOVAC customer service at 805-220-2023 if repairs should be necessary.

### Outline Dimensions

## KILOVAC WD25 Paralleling Relays

### Product Facts

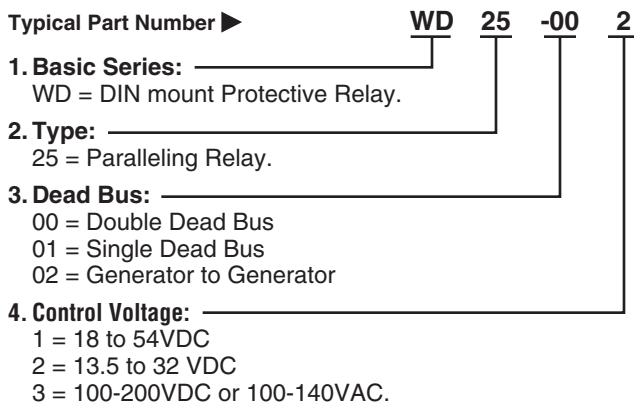

- Function 25
- ANSI/IEEE C37.90-1978

### WD25 Operation

WD25 paralleling relays are used to ensure that two circuits are synchronized. When voltage, phase relationship and frequency are within the selected synchronizing limits, the output relay will energize. The WD25 paralleling relay allows for a generator to be brought online without damage or system disturbance. WD25 series with a “dead bus” feature will energize for a synchronized condition or an “on line” generator, “dead bus” condition. This “dead bus” feature allows the generator to energize a dead bus. The “double dead bus” feature permits paralleling of two buses when: (a) both the line voltages are equal and in phase, or (b) when either bus is “hot” and the other bus is “dead.”

### Ordering Information

#### Typical Part Number ►

Our authorized distributors are more likely to stock these items.

WD25-001  
 WD25-013

### WD25 Specifications

**Nominal Operating Range** — 120, 208, 277 or 480 VAC, selectable.

**Maximum Sensing Range** — 575VAC.

**Nominal Frequency Range** — 40-400 Hz.

**Contact Form** — 2 form C (DPDT).

### WD25 Calibration

The calibration marks on the faceplate are provided only as guides. Proper calibration requires using an accurate voltmeter. Use the following procedure to calibrate the WD25:

1. Remove the cover.
2. Adjust the SYNC VOLTAGE control fully counterclockwise (CCW). Apply nominal voltage to the LINE B (bus) sensing terminals.
3. Apply the maximum desired synchronization voltage to the LINE A (generator) terminals. This voltage should be in phase with LINE B (bus) voltage and have the same frequency.
4. Slowly adjust the SYNC VOLTAGE control clockwise (CW) until the relay energizes.

### Sense Voltage

|                              |                                       |     |     |     |
|------------------------------|---------------------------------------|-----|-----|-----|
| Voltage (nominal)            | 120                                   | 208 | 277 | 480 |
| Synch Voltage (% of nom.)    | 6 - 30% (= 4°- 20° electrical degree) |     |     |     |
| Dead Bus Voltage (% of nom.) | 10 - 70% (Dead Bus)                   |     |     |     |

### Control Voltage

|                     |          |            |            |

### WD25 Connections

### WD25 Typical Hookup

**NOTE:** For single dead bus option, connect the generator to 1 & 3 and the bus to 5 & 7.

## KILOVAC WD2759 Over/Undervoltage Relays

### Product Facts

- Function 27/59
- ANSI/IEEE C37.90-1978

### WD2759 Operation

WD2759 AC voltage sensing relays provide voltage monitoring and protection in AC systems from 50 to 400 Hz. Sensing voltages, number of phases, over and undervoltage setpoint, and time delays are user configured. WD2759 voltage relays operate when the externally adjustable trip point is reached. An external time delay control is provided with an adjustment of .5 to 10 seconds. This time delay may be used to prevent false tripping when there are slight variations in the voltage supply. On overvoltage (OV) the output relay energizes when the input signal exceeds the trip point. On undervoltage (UV) the output relay energizes when the input signal goes below the trip point. A green LED indicates power to the relay. Red LED lights indicate the state of the undervoltage and overvoltage trips.

### Sense Voltage

|                     |         |         |         |         |
|---------------------|---------|---------|---------|---------|
| Voltage (nominal)   | 120     | 208     | 277     | 480     |
| UV Adjustment Range | 72-120  | 125-208 | 166-277 | 288-480 |
| OV Adjustment Range | 120-168 | 208-291 | 277-388 | 480-672 |

### Control Voltage

|                     |          |            |            |
|---------------------|----------|------------|------------|
| Model WD2759        | -001     | -002       | -003       |
| Input Voltage (VDC) | 18 to 54 | 13.5 to 32 | 100 to 200 |
| Input Voltage (VAC) | —        | —          | 100 to 140 |

### WD2759 Specifications

**Nominal Operating Range** — 120, 208, 277 or 480 VAC, selectable.

**Maximum Sensing Range** — 700VAC.

**Nominal Frequency Range** — 50-400 Hz.

**Contact Form** — 1 form C (SPDT) for undervoltage and 1 form C (SPDT) for overvoltage.

**Time Delay Adjustment** — 0.5 to 10 sec.

### WD2759 Calibration

The calibration marks on the faceplate have a maximum error of 10% and are provided only as guides. Proper calibration requires using an accurate voltmeter in parallel with the input signal. Use the following procedure to calibrate your relay.

#### OVER VOLTAGE

1. Remove cover.
2. Adjust the TRIP SET control fully clockwise (CW) and the TIME DELAY control fully counterclockwise (CCW).
3. Apply the desired trip voltage to the relay.
4. Slowly adjust the TRIP SET control CCW until the relay trips.

5. Remove the applied voltage (do not change the voltage level) and set the TIME DELAY control to the desired time delay.
6. Apply the trip voltage to the relay and measure the time to trip.
7. Adjust the TIME DELAY and repeat steps 4 and 5 until you have the desired time delay.

#### UNDER VOLTAGE

1. Remove cover.
2. Adjust the TRIP SET control fully CCW and the TIME DELAY control fully CCW.
3. Decrease the applied sensing voltage from the nominal value until the desired tripping voltage is reached.
4. Slowly adjust the TRIP SET control CW until the relay trips.
5. Set the TIME DELAY control to the desired time delay and apply nominal voltage to the relay.
6. Step down the applied voltage from nominal to a level just below the trip level set in Step 3 and measure the time delay.
7. Adjust the TIME DELAY and repeat steps 4 and 5 until the desired time delay is achieved.

Product Facts

■ Function 32

## KILOVAC WD32 Reverse Power Relays

### WD32 Operation

WD32 reverse power relays are used to monitor the direction of power from AC generators. This is accomplished by measuring  $I \cos \phi$ . If current from the generator is reversed and exceeds the adjustable setting, the relay will trip. A 0.5 to 20 second time delay is provided. A correct setting of the trip point and time delay will prevent motorizing the generator and prevent tripping during transients that occur while synchronizing. A POWER LED indicates the condition of the power supply and a REVERSE POWER TRIP LED indicates the output status of the relay.

### WD32 Specifications

**Nominal Operating Range** — 120 to 480 VAC, 1 or 3 phase.

**Maximum Sensing Range** — 575VAC.

**Nominal Sensing Current** — 5A.

**Nominal Frequency Range** — WD32-00X — 40-400 Hz.; WD32-01X — 60 Hz.

**Contact Form** — 2 form C (DPDT).

**Time Delay Adjustment** — 0.5 to 20 sec.

**Sense Current** — Reverse Power Trip: 0.2 to 1.0A (4-20% of nominal sense current).

### Control Voltage

| Model WD32          | -001     | -002       | -003       |
|---------------------|----------|------------|------------|
| Input Voltage (VDC) | 18 to 54 | 13.5 to 32 | 100 to 200 |
| Input Voltage (VAC) | —        | —          | 100 to 140 |

### WD32 Calibration

The calibration marks on the faceplate have a maximum error of 10% and are provided only as guides. Proper calibration requires using an accurate Current Meter in series with the input current. Use the following procedure to calibrate your relay.

#### REVERSE POWER

1. Remove cover.
2. Adjust the TRIP SET control fully clockwise (CW) and the TIME DELAY control fully counterclockwise (CCW).
3. Apply the desired trip current to the relay. NOTE: for the Reverse Power (WD32-00X) a resistive load must be used and for the Reverse kVAR (WD32-01X) an inductive load must be used.
4. Slowly adjust the TRIP SET control CCW until the relay trips.
5. Remove the applied Current and set the TIME DELAY control to the desired time delay.
6. Re-apply the Current (10% more than the trip current) to the relay and measure the time to trip.
7. Adjust the TIME DELAY and repeat steps 4 and 5 until you have the desired time delay.

## KILOVAC WD32 Reverse Power Relays (Continued)

### WD32 Controls

### WD32 Connections

### WD32 Typical Hookup

## KILOVAC WD47 Phase Sequence Relays

### Product Facts

- **Function 47**
- **ANSI/IEEE C37.90-1978**

### WD47 Operation

WD47 phase sequence relays are designed to monitor the correct phase rotation and loss of phase of three phase ac systems from 50 to 400 Hz. An incorrect phase sequence or loss of any phase will cause the WD47 to pickup. When the phase sequence is corrected or the lost phase is restored the contacts dropout. Red LED's light to indicate a fault condition. A green LED indicates power to the relay. The WD47 is often used to detect reverse phase rotation or loss of phase to generators, busses, motors, and transformers.

### WD47 Specifications

- Nominal Operating Range** — 120 to 480 VAC.
- Maximum Sensing Range** — 575VAC.
- Nominal Frequency Range** — 40-400 Hz.
- Contact Form** — 2 form C (DPDT).

### WD47 Calibration

The WD47 has no adjustments and no calibration is necessary. Proper operation may be verified as follows:

1. Apply a nominal, three-phase input with the correct phase sequence. The output relay should dropout and the green LED should light.
2. Apply a nominal, three-phase input with an incorrect phase sequence. The output relay should pickup and the red LED should light.
3. Apply only one or two phases with the correct phase sequence. The output relay should pickup and the red LED should light.

### Control Voltage

| Model WD47          | -001     | -002       | -003       |
|---------------------|----------|------------|------------|

### WD47 Typical Hookup

## KILOVAC WD5051 1Ø and 3Ø Overcurrent Relays

### Product Facts

#### ■ Function 5051

### WD5051 Operation

WD5051 AC current sensing relays provide current monitoring and protection in AC systems from 50 to 400 Hz. Nominal Sensing Current, Instantaneous Over Current setpoint, Time Over Current setpoint, and Time Over Current time delay are user configured. WD5051 current relays operate when the externally adjustable trip point is reached. An external time over current time delay control is provided with an adjustment of .5 to 20 seconds. This time delay may be used to prevent false tripping when there are slight variations in the sensed current. With control power applied, the Instantaneous Over Current (IOC) contacts pick-up when the input signal exceeds the IOC trip setpoint. Similarly, with control power applied, the Time Over Current (TOC) contacts pick-up after the preset time delay when the Sense Current rises above the TOC trip setpoint. The IOC contacts may also be configured to function as an under current relay. A green LED indicates power to the relay. Red LED lights indicate the state of the IOC and TOC trips.

### Sense Current

| Current (nominal) | 1          | 3          | 6          | 8          |
|-------------------|------------|------------|------------|------------|
| IOC               | 0.2 to 1.2 | 0.6 to 3.6 | 1.2 to 7.2 | 1.6 to 9.6 |
| TOC               | 0.2 to 1.2 | 0.6 to 3.6 | 1.2 to 7.2 | 1.6 to 9.6 |

### Control Voltage

| Model WD5051        | -001     | -002       | -003       |
|---------------------|----------|------------|------------|
| Input Voltage (VDC) | 18 to 54 | 13.5 to 32 | 100 to 200 |
| Input Voltage (VAC) | —        | —          | 100 to 140 |

### WD5051 Specifications

**Sense Current Full Scale** — 1, 3, 6 or 8A, selectable.

**Maximum Sensing Current** — 10A continuous; 30A for 10 sec.; 60A for 2.5 sec.; 100A for 0.9 sec..

**Nominal Frequency Range** — 50-400 Hz.

**Contact Form** — 1 form C (SPDT) for IOC and 1 form C (SPDT) for TOC.

**TOC Time Delay Adjustment** — 0.5 to 20 sec.

**IOC Operate Time (max.)** — 0.2 sec.

### WD5051 Calibration

The calibration marks on the faceplate are provided only as guides. Proper calibration requires using an accurate ammeter in series with the current source. Use the following procedure to calibrate your relay:

#### OVERCURRENT

1. Remove the cover.
2. Adjust the TRIP SET control fully clockwise (CW) and the TIME DELAY control (TOC only) fully counter-clockwise (CCW).
3. Apply the desired trip current to the relay.
4. Slowly adjust the TRIP SET control CCW until the relay trips.
5. Remove the applied current (do not change the current level). Set the TIME DELAY (TOC only) control to the desired time delay.

## KILOVAC WD810U Over/Underfrequency Relays

### Product Facts

- **Function 81 0U**
- **ANSI/IEEE C37.90-1978**

### WD810U Operation

WD810U frequency relays are used to provide frequency monitoring and protection to generators, buses, power supplies, and other equipment. The relay operates at voltages from 120 to 480 Vac and at nominal frequencies of 50, 60, and 400 Hz. External controls include nominal frequency selection, under frequency (UF) trip set, over frequency (OF) trip set, UF time delay, and OF time delay. A green LED indicates power to the relay. Red LED's indicate the status of the UF and OF trips.

### WD810U Specifications

**Nominal Operating Frequency** — 50, 60 or 400 Hz., selectable.

**Maximum Frequency @ 400 Hz. Nominal** — 1000 Hz.

**Nominal Sensing Voltage** — 20-480VAC.

**Maximum Sensing Voltage** — 575VAC.

**Contact Form** — 1 form C (SPDT) for underfrequency and 1 form C (SPDT) for overfrequency.

**Time Delay Adjustment** — 0.5 to 10 sec.

### WD810U Calibration

The calibration marks on the faceplate are provided only as guides. Proper calibration requires using an accurate frequency meter in parallel with the input signal.

#### UNDER FREQUENCY

1. Remove the cover.
2. Set the SENSE FREQUENCY to the nominal system frequency. Adjust the Under Frequency TRIP SET fully clockwise (CW) and the TIME DELAY control fully counterclockwise (CCW).
3. Apply the desired trip frequency to the relay.
4. Slowly adjust the TRIP SET control CCW until the relay trips.
5. Set the TIME DELAY control to the desired time delay and apply nominal frequency to the relay.
6. Step down the applied frequency from nominal to just below the trip level set in Step 4 and measure the time delay.
7. Adjust the TIME DELAY and repeat steps 5 and 6 until the desired time delay is set.

#### OVER FREQUENCY

1. Remove the cover.
2. Set the SENSE FREQUENCY to the nominal system frequency. Adjust the OF TRIP SET and TIME DELAY controls fully counterclockwise (CCW).
3. Apply the desired trip frequency to the relay.
4. Slowly adjust the TRIP SET control clockwise (CW) until the relay trips.
5. Set the TIME DELAY control to the desired time delay and apply nominal frequency to the relay.
6. Step down the applied frequency from nominal to just below the trip level set in Step 4 and measure the time delay.
7. Adjust the TIME DELAY and repeat steps 5 and 6 until the desired time delay is set.

### Sense Frequency

| Frequency (nominal) | 50    | 60    | 400     |

### Product Facts

- ANSI/IEEE C37.90-1978

#### Undervoltage Models

The relay is energized at normal voltage, N.C. contacts will open and N.O. contacts will close. The relay will de-energize when the voltage drops below the U/V set point.

#### Overvoltage Models

The relay is de-energized at normal voltage, N.C. contacts are closed and N.O. contacts are open. The relay will energize, when the voltage rises above the O/V set point.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage** — 12 VDC to 560 VDC

**Drop-out Point (u/v models)** — 70-100% of nominal voltage, screwdriver adjustable

**Pick-Up Point (o/v models)** — 100-125% of nominal voltage, screwdriver adjustable

**Output Contacts** — One set N.O., One set N.C.

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Operating Temperature Range** — -40°C to +75°C

**Temperature Effects** — Less than 1% voltage drift over the temperature range

**Power Consumption** — 12 to 60 VDC models — 1 W max. 120 to 305 VDC models — 2 W max. 405 to 470 VDC models — 3 W max. 560 VDC model — 4 W max.

**Time Delay** — A short duration delay is provided to prevent nuisance tripping due to momentary dips or surges in voltage. The drop-out delay, following a voltage fault is 75 to 100 milliseconds.

#### Notes:

- Remove black screws for access to the O/V and U/V trip adjustment.
- Clockwise rotation of the adjustment potentiometer will raise the voltage trip point.
- The adjustments are by means of a single turn potentiometer. Use a small screwdriver and do not force beyond the limit stops.

 A = 2 Form A Contacts  
 B = 2 Form B Contacts  
 H = 125 VDC Contacts  
 P = Transient Protection

Time Curves DC Overvoltage Relays

**Transient Protection** — All voltage relays will withstand momentary voltage surges of twice the nominal rated input voltage (standard).

**Option "P"** provides additional transient protection which complies with the requirements of ANSI/IEEE C37.90-1978

**Consult factory for additional models.**

### WUV/WOV Series

**Product Facts**

- Function 27/59
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Voltage sensitive relays are available for both AC and DC applications for over/undervoltage protection. Combination over/undervoltage relays provide bandpass capabilities. AC relays are either single or three-phase type. Three phase models are designed to sense the average of the three phases or the highest single phase. Voltage trip points are screwdriver adjustable, and operation is time-delayed so that momentary voltage transients will not cause nuisance tripping.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

**Product Specifications**

- Nominal Voltage** — 120 VAC to 575 VAC
- Phase** — Single or Three
- Line Frequency** — 50-400 Hz
- Pick-up to Drop-out Differential** — 2.5% maximum
- Drop-out Point (u/v models)** — 70-100% of nominal voltage, screwdriver adjustable
- Pick-Up Point (o/v models)** — 100-125% of nominal voltage, screwdriver adjustable
- Output Contacts** — One set N.O., One set N.C.
- Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC
- Operating Temperature Range** — -20°C to +65°C
- Power Consumption** — 2 VA maximum
- Time Delay** — 150-300 ms (UV Model)
- Minimum Life** — 500,000 operations

- Notes:**
1. Remove black screw for access to the voltage trip adjustment.
  2. Clockwise rotation of the adjustment potentiometer will raise the voltage trip point.

- H - 125VDC, 3A Contacts

**Typical Time Curve**

**Transient Protection** — All voltage relays will withstand momentary voltage surges of twice the nominal rated input voltage (standard).

**Option "P"** provides additional transient protection which complies with the requirements of ANSI/IEEE C37.90-1978

**Consult factory for additional models.**

## WUVT/WOVT Series

### Product Facts

- Function 27/59
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

### Undervoltage Models

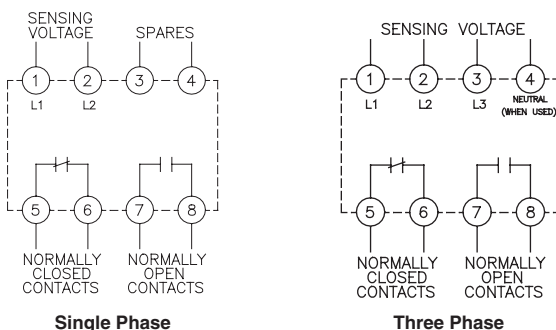

The relay is energized at normal voltage, N.C. contacts will open and N.O. contacts will close. The relay will de-energize when the voltage drops and remains below the U/V set point for the duration of the set time delay.

### Overvoltage Models

The relay is de-energized at normal voltages, N.C. contacts are closed and N.O. contacts are open. The relay will energize, when the voltage rises and remains above the O/V set point for the duration of the set time delay.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage** — 100 VAC to 575 VAC

**Phase** — Single or Three

**Line Frequency** — 50-400 Hz

**Pick-up to Drop-out Differential** — 1% typical

**Drop-out Point (u/v models)** — 70-100% of nominal voltage, screwdriver adjustable

**Pick-Up Point (o/v models)** — 100-125% of nominal voltage, screwdriver adjustable

**Output Contacts** — One set N.O., One set N.C.

**Contact Ratings** —

5 amp resistive at 120 VAC or 28 VDC

**Operating Temperature Range** — -40°C to +70°C

**Power Consumption** — 3 VA maximum

**Time Delay** — 0.5 to 20 seconds, screwdriver adjustable

**Voltage Reset** — The reset is automatic when voltage returns to normal.

### Notes:

1. Remove black screws for access to the voltage and time delay adjustment potentiometer.
2. Clockwise rotation of the voltage adjust potentiometer will raise the voltage trip point.
3. Clockwise rotation of the time adjust potentiometer will increase the time delay (Pick-up time for O/V models, drop-out time for U/V models).
4. The adjustments are single turn potentiometers, use a small screwdriver and do not force beyond the limit stops.
5. On U/V models, when the voltage falls to approximately 33% of nominal or below, the relay will drop out in 0.150 to 0.300 seconds, regardless of the time delay setting.

**Consult factory for additional models.**

## WOUV DC Series, Over/Undervoltage

### Product Facts

- ANSI/IEEE C37.90-1978

The relay will energize at normal voltage conditions. The normally open contacts will close, and the normally closed contacts will open. The relay will de-energize during over or undervoltage conditions. Reset is automatic when the voltage returns to normal.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage ( $\pm 10\%$ )** — 12 VDC to 560 VDC

**Drop-out Point (u/v models)** — 70-100% of nominal voltage, screwdriver adjustable

**Pick-Up Point (o/v models)** — 100-125% of nominal voltage, screwdriver adjustable

**Output Contacts** — One set N.O., One set N.C.

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Operating Temperature Range** —  $-40^{\circ}\text{C}$  to  $+75^{\circ}\text{C}$

**Temperature Effects** — Less than 1% voltage drift over the temperature range.

**Power Consumption** — 12 to 60 VDC models — 1 W max. 120 to 305 VDC models — 2 W max. 405 to 470 VDC models — 3 W max. 560 VDC Model — 4 W max.

**Time Delay** — A short duration delay is provided to prevent nuisance tripping due to momentary dips or surges in voltage. The drop-out delay, following a voltage fault is 75 to 100 milliseconds

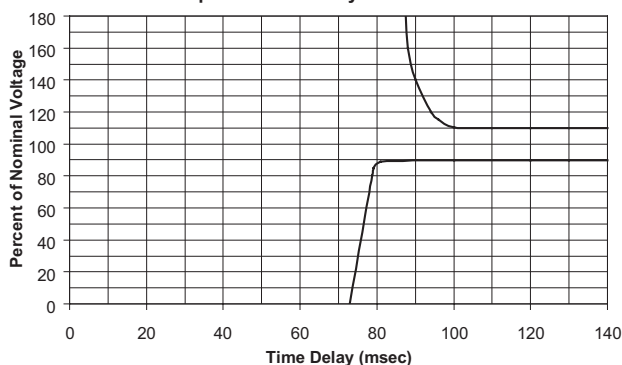

#### Notes:

- Remove black screws for access to the O/V and U/V trip adjustment.
- Clockwise rotation of the adjustment potentiometer will raise the voltage trip point.
- The adjustments are by means of a single turn potentiometer. Use a small screwdriver and do not force beyond the limit stops.

Drop-Out Time Delay WOUV...DC Series

**Transient Protection** — All voltage relays will withstand momentary voltage surges of twice the nominal rated input voltage (standard).

**Option "P"** provides additional transient protection which complies with the requirements of ANSI/IEEE C37.90-1978

**Consult factory for additional models.**

## WOUVT Series, Over/Undervoltage

### Product Facts

- Function 27/59
- ANSI/IEEE C37.90-1978

Voltage sensitive relays are available for both AC and DC applications for overvoltage and undervoltage protection. Combination over/undervoltage relays provide band-pass capabilities. AC relays are either single or three-phase type. Three phase relays are designed to sense the average of the three phases. Voltage trip points are screwdriver adjustable, and operation is time-delayed so that momentary voltage transients will not cause nuisance tripping.

### Operation

The relay will energize at normal voltage condition. The normally closed contact (Form B) will open and the normally open (Form A) will close. The relay will de-energize after time delay when over or undervoltage condition is reached.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage** — 120 VAC to 575 VAC

**Phase** — Single or Three

**Line Frequency** — 50-400 Hz

**Type of Sensing** — Average of all three phases

**Undervoltage Trip** — 70-100% of nominal voltage, screwdriver adjustable

**Overvoltage Trip** — 100-125% of nominal voltage, screwdriver adjustable

**Drop-out Time Delay** — 0.5 to 20 seconds, screwdriver adjustable

**Pick-up to Drop-out Differential** — 2% maximum

**Output Contacts** — One set N.O., One set N.C.

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Operating Temperature Range** — -40°C to +70°C

**Power Consumption** — 4 VA maximum

### Notes:

1. Remove black screw for access to the voltage trip and time delay adjustment potentiometer.
2. Clockwise rotation of the voltage adjustment potentiometer will raise the voltage trip point.
3. Clockwise rotation of the time adjustment potentiometer will increase the drop-out time delay.

**Option "P"** provides additional transient protection which complies with the requirements of ANSI/IEEE C37.90-1978

**Consult factory for additional models.**

## 250 Series, Over/Undervoltage

### Product Facts

- Function 27/59
- ANSI/IEEE C37.90-1978

The 250 series relays provide combined Overvoltage and Undervoltage protection in a single compact unit.

Models are available for single phase or three phase applications, and are suitable for either 50 Hz, 60 Hz, or 400 Hz operation. The trip point is adjustable.

A transistorized circuit provides a sharp and accurate response at the preset tripping voltage; unaffected by temperature or frequency variations.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage** — See Ordering Information

**Undervoltage Trip** — 70-100% of nominal voltage, screwdriver adjustable

**Overvoltage Trip** — 100-125% of nominal voltage, screwdriver adjustable

**Pick-up to Drop-out Differential** — 3% maximum

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Contact Form** — One set N.O., one set N.C.

**Operating Temperature Range** — -20°C to +85°C

### Notes:

1. Remove screws for access the overvoltage or undervoltage trip adjustments. Clockwise rotation of the adjustment potentiometer will raise the trip point.

### Contact Arrangements

**NC** — Open at nominal voltage. Closed at Overvoltage and Undervoltage

**NO** — Closed at nominal voltage. Open at Overvoltage and Undervoltage

- 253X\* = 230 VAC, 3 Phase, 3 Wire, 50-400 Hz
- 254X\* = 380 VAC, 3 Phase, 3 Wire, 50-400 Hz
- 255X\* = 460 VAC, 3 Phase, 3 Wire, 50-400 Hz
- 256X\* = 575 VAC, 3 Phase, 3 Wire, 50-400 Hz

Mounting

- Blank = Stud
- X = Flange

\* Enclosure height is 3.835"

Consult factory for additional models.

## D100X Series, Close Differential

### Product Facts

- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Close Differential Relays are voltage sensitive. The pick-up and drop-out voltage settings are independently adjustable, which allows precise setting of the differential voltage. This relay is available in a wide range of AC and DC voltages. Their primary application is the sensing and control of transfer switches.

### Operation

Monitors a single phase AC signal, and is used for undervoltage detection. Has separate pick-up and drop-out voltage settings, providing an adjustable hysteresis.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

- Nominal Voltage** — AC, Single Phase, see Ordering Information
- Nominal Frequency** — 50 to 400 Hz.
- Pick-Up Adjustment Range** — 67-100% of nominal voltage
- Drop-Out Adjustment Range** — 67-100% of nominal voltage
- Maximum Differential Setting** — 33% of nominal voltage
- Minimum Differential Setting** — 2% of nominal voltage
- Output Contacts** — Form C (SPDT)
- Contact Ratings** — 5 Amp resistive at 120 VAC or 28 VDC
- Operating Temperature Range** — -20°C to +85°C
- Expected Life** — 10 million operations
- Inverse Time Drop-Out** — The differential relay contains a time delay before operation so that momentary voltage transients do not affect the operation of the relay. The time delay has an inverse time characteristic so that excessive voltage conditions will cause a more rapid drop-out. This time delay is approximately 200mSec. (12 cycles) at the trip settings and decreases to 30 mSec. at approximately 15% beyond the trip settings.

### Notes:

1. Remove black nylon protective screws to gain access to the two internal adjustment potentiometers.
2. Clockwise rotation of the pick-up and drop-out adjustment will raise the voltage trip point.
3. The relay contacts are shown in the de-energized state.

Surge Withstand Capability is in compliance with the requirements of ANSI/IEEE C37.90B

**Consult factory for additional models.**

## D101X Series, 3 Phase Adjustable, Close Differential

### Product Facts

- ANSI/IEEE C37.90-1978
- UL File No. E58048
- CSA File No. LR61158

Close Differential Relays are voltage sensitive. The pick-up and drop-out voltage settings are independently adjustable, which allows precise setting of the differential voltage. This relay is available in a wide range of AC voltages. Their primary application is the sensing and control of transfer switches.

### Operation

The output contacts will close when the voltage of all three phases is above the pre-set pick-up point, and will open when any one phase drops below its drop-out setting.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage** — AC, Three Phase, see Ordering Information

**Nominal Frequency** — 50 to 500 Hz.

**Pick-Up Adjustment Range** — 66-100% of nominal voltage, screw-driver adjustable

**Drop-Out Adjustment Range** — 66-100% of nominal voltage, screw-driver adjustable

**Output Contacts** — SPNO

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Operating Temperature Range** — -20°C to +85°C

### Notes:

1. Remove screws for access to pick-up and drop-out trip adjustments.
2. Clockwise rotation of the pick-up and drop-out adjustment will raise the voltage trip point.

### Ordering Information

## 700 Series w/ Adjustable Time Delay

### Product Facts

- Function 32
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Several types of Reverse Power Relays are available including relays sensitive to reverse reactive power (kVAR). KILOVAC is the leading brand of reverse power relays. Our rugged sealed construction provides continuous and reliable operation unaffected by shock, vibration or other severe environments. Reverse Power Relays are used for the protection of generator sets operating in parallel.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

**Model 710TD**

Designed for 120, 220 or 266 volt line to neutral connection

**Model 720TD (X) thru 724TD (X)**

For operation on three phase, three wire

### Ordering Information

Sample Part Number ▶

**720TDX**

Type:

- 710TD = 120V, 220V, 266V line to neutral
- 720TD = 120V, L-L, 3 Phase
- 721TD = 230V, L-L, 3 Phase
- 722TD = 380V, L-L, 3 Phase
- 723TD = 460V, L-L, 3 Phase
- 724TD = 575V, L-L, 3 Phase
- 725TD = 416V, L-L, 3 Phase
- 730TD = 120 V, 230 V, 380 V, 460 V, L-L, 3 Phase or 120 V, Single Phase, L-N

Mounting:

- X = Flange
- Blank = Stud

Options:

- 7 = Reverse Inductive, 60 Hz

### Product Specifications

#### Line Voltage —

Model 710TD — 120 V, 220 V or 266 V, line to neutral  
 Model 730TD — 120 V, 230 V, 380 V, 460 V, L-L, 3 Phase or 120 V, Single Phase, L-N

All models for three phase, three wire sensing are available, see Ordering Information

#### Line Frequency — 50-500 Hz.

#### Current Requirements —

0 to 5 amp max direct or from CT with 5 amp secondary

#### Trip Adjustment —

Screwdriver adjustable 4% to 20% (of the 5 amp rating)

#### Time Delay Adjustment — 0.5 to 20 seconds, screwdriver adjustable

#### Output Contacts — One set N.O., one set N.C.

#### Contact Ratings — 5 amp resistive at 120 AC or 28 Vdc

#### Power Consumption —

Voltage circuit — 2 VA max.  
 Current circuit — 4 VA max.

#### Weight — 2.75 lbs. max.

### Notes:

1. Remove screw for access to the pick-up and time delay adjustments.
2. Clockwise rotation of the pick-up adjustment will raise the reverse trip point.
3. Clockwise rotation of the time adjustment will increase the time delay.
4. Polarity of the voltage and the current connections must be observed for true power sensing.
5. Interchanging connections on terminals 5 and 6, will cause the output contacts to pick-up on forward power and dropout on no power or reverse power.

Consult factory for additional models.

### 1000 Series

**Product Facts**

- Function 47
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Phase failure relays protect motors, equipment and personnel from damage or injury caused by open phase, reversed phase sequence, or low voltage in a three phase system. Models are available for 50 and 60 Hz with voltages up to 575 volts. Motor control switchboards are a common application.

**Operation**

The contacts of the relay will close only when it senses normal conditions of three phase power at the proper phase sequence.

The relay contacts will remain in their normally open position (de-energized) when voltage with incorrect phase sequence is applied, one or more phases are open, or at undervoltage condition.

TERMINAL STRIPS  
#6 - 32 SCREWS

**Product Specifications**

- Nominal Voltage** — See Ordering Information
- Voltage Drop-Out** — 75% to 100% of nominal, screwdriver adjustable
- Pick-Up to Drop-Out Differential** — 3% approx.
- Ambient Operating Temperature** — -40°C to +70°C
- Temperature Drift** — ± 1%
- Time Delay** — See Curve
- Output Contacts** — One set, normally open
- Contact Ratings** —  
10 amp at 28 VDC resistive  
10 amp at 230 VAC resistive

**Notes:**

1. Remove screw for access to the undervoltage adjustment.
2. Clockwise rotation of the adjustment potentiometer will raise the drop-out voltage.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

**Ordering Information**

Sample Part Number ►

1004X

Type:

- 1001 = 120 V, 60 Hz, 3 phase, L-L
- 1007 = 208 V, 60 Hz, 3 phase, L-L
- 1002 = 230 V, 60 Hz, 3 phase, L-L
- 1012 = 300 V, 60 Hz, 3 phase, L-L
- 1013 = 350 V, 60 Hz, 3 phase, L-L
- 1003 = 380 V, 50 Hz, 3 phase, L-L
- 1004 = 460 V, 60 Hz, 3 phase, L-L
- 1005 = 525 V, 60 Hz, 3 phase, L-L
- 1006 = 575 V, 60 Hz, 3 Phase, L-L

Mounting:

- X = Flange
- Blank - Stud

Consult factory for additional models.

## 900 Series

### Product Facts

#### ■ Function 47

Phase sequence relays are designed to monitor the correct phase rotation of a three phase system. Several models are available from 50 Hz, 60 Hz, and 400 Hz with voltages up to 575 volts. High shock relay output and reverse contacts are also available.

#### Operation

The relay remains de-energized when voltage in the proper phase sequence (A, B, C) is applied, the relay is energized when voltage with incorrect sequence (A, C, B) is applied.

### Product Specifications

**Input Voltage** — See Ordering Information

**Output Contacts** — SPDT

**Contact Ratings** — 5 amp resistive at 120 Vac or 28 Vdc

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Ordering Information

Sample Part Number ►

901X

Type: \_\_\_\_\_

- 900-3X = 120 VAC, 60 Hz, 3 phase, L-L
- 910X = 190-520 VAC, 60 Hz, 3 Phase, L-L
- 900-2X = 208-230, 50/60 Hz, 3 Phase
- 900X = 230 VAC, 60 Hz, 3 phase, L-L
- 901X = 460 VAC, 60 Hz, 3 phase, L-L

Mounting: \_\_\_\_\_

- X = Flange
- Blank - Stud

Consult factory for additional models.

### WCB Series

**Product Facts**

- Function 60 or 87
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Current Balance Relays are designed to sense unbalanced current flow in a three phase system. The primary application of Current Balance Relays is to protect three phase motors against phase unbalance or phase failure.

**Operation**

With control voltage applied to the relay, the output contacts will energize when the three phase currents are balanced (including zero currents), and will be de-energize by unbalance currents.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

**Product Specifications**

- Line Current** — Three Phase, AC current, 50-400 Hz Direct or from CT.  
5 amp continuously  
20 amp, 30 sec.  
200 amp, 0.10 sec.
- Control Voltage** — See Ordering Information
- Unbalanced Trip Point** — Screwdriver adjustable. Adjustment range in accordance with ordering information. (The unbalanced value is defined as the difference between the highest and the lowest phase current).
- Drop-Out Time Delay** — 0.9 to 1.3 seconds
- Surge Withstand Capability** — In compliance with C37.90B ANSI/IEEE
- Operating Temperature** — -40°C to +70°C
- Burden** —  
Current input — 5.0 VA,  
Phase Control voltage — 3.0 VA
- Contact Ratings** —  
One set, N.O., One set N.C.  
5 amp resistive at 120 VAC or 28 VDC

**Notes:**

1. Remove black screw for access to the trip adjustment.
2. Clockwise rotation of the adjustment potentiometer will raise the unbalance trip point.
3. The output contacts are shown de-energized.

**Ordering Information**

B = two normally closed contacts

11 Protective Relays

## WC1 & WCT1 Series, Overcurrent

### Product Facts

- Function 50/51
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Current sensitive relays are available for single and three phase applications. Voltage controlled overcurrent relays protect generators against fault currents below the full rated value, when the fault produces a voltage drop as in the case of short circuits or grounds. Phase balance relays are available to sense and control unbalanced current flow in three phase systems. Current differential relays operate when the differential between two currents exceeds preset values. Over/under current phase-band relays are also available.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

- Line Current** — Single Phase, AC current, 50-400 Hz Direct or from CT
- Control Voltage** — See Ordering Information
- Trip Point** — Screwdriver adjustable. Adjustment range in accordance with ordering information.
- Pick-up to Drop-Out Differential** — Approximately 0.1 amp.
- Overcurrent Allowance** — Maximum of 500% for 0.25 seconds
- Surge Withstand Capability** — In compliance with C37.90B ANSI/IEEE
- Operating Temperature** — -40°C to +70°C
- Temperature Drift** — ± .05%
- Burden** — Current input — 1.2 VA, Control voltage — 2.5 VA
- Contact Ratings** — One set, N.O., One set N.C. 5 amp resistive at 120 VAC or 28 VDC

### Notes:

1. Remove black screws for access to the current pick-up and the time delay adjustment.
2. Clockwise rotation of the pick-up adjustment will raise the current trip point.
3. Clockwise rotation of the time delay adjustment, (Type WCT1 only) will increase the time delay.

### Time Delay

**Standard Time Delay (WC1 Series)** — A fixed inverse time delay is incorporated in all overcurrent relays and is represented by the typical curves shown.

**Adjustable Time Delay (WCT1 Series)** — The time delay is field adjustable. The standard time delay can be increased by any value between 0.5 and 20 seconds.

### Ordering Information

Sample Part Number ► **WC1 -48DC -5 -B**

Type: \_\_\_\_\_  
 WC1 = Per Time Curves  
 WCT1 = Adjustable Time Delay

## WC3 & WCT3 Series, Overcurrent

### Product Facts

- Function 50/51
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Current sensitive relays are available for single and three phase applications. Voltage controlled overcurrent relays protect generators against fault currents below the full rated value, when the fault produces a voltage drop as in the case of short circuits or grounds. Phase balance relays are available to sense and control unbalanced current flow in three phase systems. Current differential relays operate when the differential between two currents exceeds preset values. Over/under current phase-band relays are also available.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Time Delay

**Standard Time Delay (WC3 Series)** — A fixed inverse time delay is incorporated in all overcurrent relays and is represented by the typical curves shown.

**Adjustable Time Delay (WCT3 Series)** — The time delay is field adjustable. The standard time delay can be increased by any value between 0.5 and 20 seconds.

### Product Specifications

- Line Current** — Three Phase, AC current, 50-400 Hz Direct or from CT
- Control Voltage** — See Ordering Information
- Trip Point** — Screwdriver adjustable. Adjustment range in accordance with ordering information.
- Pick-Up to Drop-Out Differential** — Approximately 0.1 amp
- Overcurrent Allowance** — Maximum of 500% for 0.25 seconds
- Surge Withstand Capability** — In compliance with the requirements of ANSI/IEEE
- Operating Temperature** — -40°C to +70°C
- Temperature Drift** — ± 0.05%/°C
- Burden** — Current input — 1.2 VA, Control voltage — 2.5 VA
- Contact Ratings** — One set, N.O., One set N.C. 5 amp resistive at 120 VAC or 28VDC

### Notes:

1. Remove black screws for access to the current pick-up and the time delay adjustment.
2. Clockwise rotation of the pick-up adjustment will raise the current trip point.
3. Clockwise rotation of the time delay adjustment, (Type WCT3 only) will increase the time delay.

### Ordering Information

**Sample Part Number** ▶ **WCT3 -48DC -5 A**

**Type:** WC3 = Per Time Curves  
WCT3 = Adjustable Time Delay

26 DC  
48 DC  
125 DC  
120 AC  
230 AC  
380 AC  
460 AC

**Trip Adjustment Range**  
1 = .2 amp - 1 amp  
5 = 1 amp to 5 amp  
10 = 2 amp to 10 amp

**Other Options**  
A = Two normally open contacts  
B = Two normally closed contacts

Typical Curves (WC3 Series)

See previous page for 1-phase models and consult factory for additional models.

## WCD Series

### Product Facts

- Function 87
- ANSI/IEEE C37.90-1978

Current Differential Relays are used for the protection of transformers, motors and generators, by comparing the magnitude of the current entering and leaving the protected circuit. On a given phase winding, any difference between the two currents will indicate an internal fault; the relay will sense the vectorial difference between the two currents of the protected section and will initiate a quick disconnection of the unit, to prevent disastrous consequences.

The relay may also be used to protect internal faults on transformers, such as: ground faults, shorted winding, leakage between primary and secondary, etc. It will sense and compare primary vs. secondary currents, once the turns ratio has been taken into consideration.

### Operation

With control voltage applied, the output contacts (shown in the de-energized position) will remain de-energized as long as the difference between the two input currents remains below the pre-set trip value. The contact will transfer to the energized position when the current difference exceeds the trip value.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

- Line Current** —  
Single Phase, AC current, 50-400 Hz  
Direct or from CT  
5 amp continuously  
20 amp 30 seconds  
200 amp, 0.10 seconds
- Control Voltage** — See Ordering Information
- Differential Trip Point** —  
Screwdriver adjustable. See Ordering Information
- Operating Temperature** —  
-40°C to +75°C
- Burden** —  
Current input — 2.5 VA max.  
Control voltage DC — 2 W max.  
AC — 2 VA max.
- Output Contacts** —  
One set, N.O., One set N.C.
- Contact Ratings** —  
5 amp resistive at 120 VAC or 28 VDC

### Notes:

1. Remove black screws for access to the trip adjustments.
2. Clockwise rotation of the adjustment potentiometer will raise the current differential trip point.
3. The output contacts are shown de-energized.

1800 Series

Product Facts

- Function 25
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Application

These relays are designed for automatic paralleling (synchronizing) of generators. The relays sense the phase angle displacement and the amplitude difference between two voltages and permit paralleling only when both voltages are equal and in phase. A short time delay is provided to assure that the frequencies are essentially the same at the moment of paralleling. The basic series is designed to parallel two or more energized AC generators. The "Dead Bus" type provides paralleling of AC generators to the main bus. They permit electrical connection of an energized generator to an un-energized line (Dead Bus). If the bus is energized, connection of the generator to the bus is permitted only when both are synchronized.

Notes

- \*Permits paralleling of two generators only when they are "on-line" and their voltages are equal and in phase (synchronized)
- \*\*Normally used to permit paralleling of a generator to a bus when: (a) both line voltages are equal and in phase, or: (b) when the generator is "on-line" and the bus is "dead"
- \*\*\*Permits paralleling of two power lines (buses) when: (a) both line voltages are equal and in phase, or: (b) when either bus is "hot" and the other bus is "dead"

Output Contact Options —

1. Two Form A. (Add -A to Model Number)
2. Two Form B. (Add -B to Model Number)

Consult factory for additional models.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Product Specifications

**Sensing Voltage** — 120 V, 230 V, 277 V, 380 V, 460 V, 575 V, & 415 V

**Line Frequency** — 50-500 Hz

**Pick-Up Adjustment** — External adjustment for field sensing of 10-30% of nominal input voltage. (Vertical voltage differential of 6 to 18 electrical degrees).

**Time Delay** — Fixed @ 60 milliseconds is provided to assure that the frequencies of both input lines are sufficiently close to permit paralleling within the preset window.

**Output Contacts** — One set N.O., one set N.C. 5 amp resistive at 120 VAC or 28 VDC

A. 3 Phase, 4 Wire System

- Connect phase "A" of LINE 1 to terminal 1
- Connect phase "A" of LINE 2 to terminal 3
- Connect the neutrals to terminals 2 & 4

B. 3 Phase, 3 Wire or 1 Phase, 2 Wire System

- Connect phase "A" of LINE 1 to terminal 1
- Connect phase "B" of LINE 1 to terminal 2
- Connect phase "A" of LINE 2 to terminal 3
- Connect phase "B" of LINE 2 to terminal 4

WOF & WUF Series

Product Facts

- Function 81 O/U
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

Application

The output contacts of frequency relays are energized when the frequency exceeds the adjustable set point. Overfrequency and underfrequency relays are available in 50, 60 and 400Hz. Combination over/underfrequency "band pass" relays are also available. These are energized at rated frequency and de-energized during overfrequency or underfrequency conditions. Frequency Differential relays are energized above the preset frequency. The pick-up and drop-out frequency settings are independently adjustable.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

Product Specifications

- Nominal Voltage (±20%)** — 120, 230, 380 and 460 volts
- Nominal Frequencies** — 50, 60 and 400 Hz.
- Trip Point** — Screwdriver adjustable. Adjustment range in accordance with ordering information.
- Operating Temperature** — -20°C to +65°C
- Differential** — The frequency pitch-up to drop-out differential is .5% max
- Voltage Drift** — ±.05% maximum frequency error for input voltage variation of ±10%
- Time Delay** — See Time versus Frequency curves
- Surge Withstand Capability** — In compliance with C37.90B ANSI/IEEE
- Output Contacts** — One set N.O., one set N.C.
- Contact Ratings** — 5 amp resistive at 120 VAC or 28VDC

Time Delay

**Standard Time Delay** — A minimum, fixed inverse time delay is incorporated in all frequency relays to prevent nuisance tripping and is represented by the typical curves shown above.

**Adjustable Time Delay** — If additional time delay is required, a suffix "T" must be added to the part number. This allows the minimum fixed time delay to be field-adjustable up to 20 seconds.

Notes:

1. Remove black screws for access to the frequency and the time adjustments.
2. Clockwise rotation of the frequency potentiometer will raise the frequency trip point.
3. Clockwise rotation of the time adjustment, option "T" will increase the time for overfrequency relays and dropout time for underfrequency relays.

Consult factory for additional models.

## WOUF Series, Over/Underfrequency

### Product Facts

- Function 81 O/U
- ANSI/IEEE C37.90-1978
- UL File No. E58048 
- CSA File No. LR61158 

The output contacts of frequency relays are energized when the frequency exceeds the adjustable set point. Overfrequency and underfrequency relays are available in 50, 60 and 400Hz. Combination over/underfrequency “band pass” relays are also available. These are energized at rated frequency and de-energized during overfrequency or underfrequency conditions. Frequency Differential relays are energized above the preset frequency. The pick-up and drop-out frequency settings are independently adjustable.

### Operation

The relay will energize at normal frequency; The normally closed contacts will open and the normally open contacts will close. The relay will drop-out after time delay at overfrequency or underfrequency.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Product Specifications

**Nominal Voltage (±20%)** — 120, 230, 380 and 460 volts

**Nominal Frequencies** — 50, 60 and 400 Hz.

**Trip Point** — Screwdriver adjustable. Adjustment range in accordance with ordering information.

**Operating Temperature** — -40°C to +65°C

**Differential** — The frequency pick-up to drop-out differential is .5% max

**Voltage Drift** — ± 0.05% maximum frequency error for input voltage variation of ±10%

**Time Delay** — See Time versus Frequency curves

**Surge Withstand Capability** — In compliance with C37-90B ANSI/IEEE

**Output Contacts** — One set N.O., one set N.C.

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

### Notes:

1. Remove black screws for access to the frequency and the time adjustments.
2. Clockwise rotation of the frequency potentiometer will raise the frequency trip point.
3. Clockwise rotation of the time adjustment, option “T” will increase the drop-out time delay.

### Time Delay

**Standard Time Delay** — A minimum, fixed inverse time delay is incorporated in all frequency relays to prevent nuisance tripping and is represented by the typical curves shown below.

**Adjustable Time Delay** — If additional time delay is required, a suffix “T” must be added to the part number. This allows the minimum fixed time delay to be field-adjustable up to 20 seconds.

## 20-000 Series

### Product Facts

- Function 81 0

The output contacts of frequency relays are energized when the frequency exceeds the adjustable set point. Overfrequency and underfrequency relays are available in 50, 60 and 400Hz. Combination over/underfrequency “band pass” relays are also available. These are energized at rated frequency and de-energized during overfrequency or underfrequency conditions. Frequency Differential relays are energized between the preset frequencies. The pick-up and drop-out frequency settings are independently adjustable.

### Operation

The normally open contacts close, and the normally closed contacts open, at all frequencies above the set point. The contacts in the connection diagram, are shown in the de-energized position (below the trip set point).

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

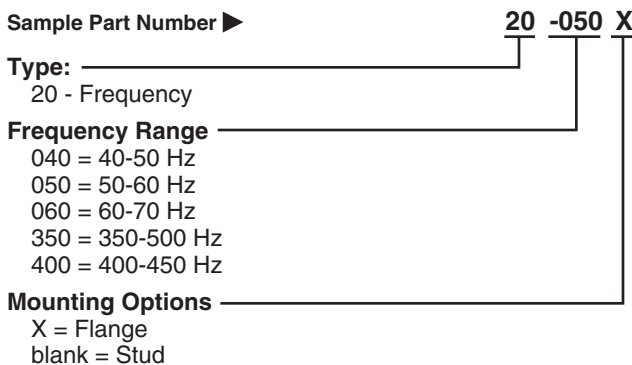

### Product Specifications

- Input Voltage ( $\pm 10\%$ )** — 120 VAC, Single Phase
- Frequencies Range (adjustable)** — See Ordering Information
- Differential** — Frequency pick-up to drop-out differential is 1% max
- Temperature Range** —  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
- Temperature Drift** —  $\pm 1\%$  frequency error over temperature range
- Voltage Error** —  $\pm 1\%$  for input voltage of 120 VAC  $\pm 10\%$
- Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC
- Output Contacts** — One set N.O., one set N.C.

### Notes:

1. Remove screw for access to trip adjustment.

### Ordering Information

Consult factory for additional models.

25-000 Series

Product Facts

- Function 81 O/U
- ANSI/IEEE C37.90-1978

The output contacts of frequency relays are energized when the frequency exceeds the adjustable set point. Overfrequency and underfrequency relays are available in 50, 60 and 400Hz. Combination over/underfrequency “band pass” relays are also available. These are energized at rated frequency and de-energized during overfrequency or underfrequency conditions. Frequency Differential relays are energized above the preset frequency. The pick-up and drop-out frequency settings are independently adjustable.

Operation

The normally open contacts close, and the normally closed contacts open, at nominal frequency. The contacts are de-energize at underfrequency, overfrequency or no input voltage.

Product Specifications

- Input Voltage (±10%)** — 120 VAC
- Frequency Range (adjustable)** — See Ordering Information
- Trip Points** — Screwdriver adjustable
- Temperature Range** — -20°C to +85°C
- Temperature Drift** — ± 1% frequency error over temperature range
- Voltage Drift** — ± 1% frequency error input voltage variation of ± 10%
- Contact Ratings** — 5 Amp resistive at 120 VAC or 28VDC
- Output Contacts** — One set N.O., One set N.C.

Notes:

1. The contacts are shown in the de-energized position.
2. Remove screws for access to the underfrequency and overfrequency trip adjustments.
3. Clockwise rotation of the adjustment potentiometer will raise the frequency trip points.

Note: Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

## WGD Series — Floating Ground

### Product Facts

- ANSI/IEEE C37.90-1978
- UL file No. E58048
- CSA file No. LR61158

Ground Fault Detectors are used to sense leakage current to ground in power transformers and generators. They are available for both AC and DC systems. Some generator systems provide auxiliary power outlets for small equipment. TE Connectivity GFD's eliminate personnel risk of accessing these outlets if a ground fault exists. Diesel locomotives and railroad line signal boxes also use GFD's for operational control purposes. The GFD monitors both positive and negative grounds for fault currents and can trigger either notification or system shut-down if these are detected. GFD's are available for both grounded and ungrounded systems.

### Operation

When the resistance between any phase to ground falls below the set point the relay will energize; The normally closed contacts will open, the normally open contacts will close.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### Ordering Information

Sample Part Number ►

WGD-

| Type:     | Volts L-L | Trip Point Adj. Phase to Ground |
|-----------|-----------|---------------------------------|
| 115-120AC | 115       | 11-55KΩ                         |
| 120-120AC | 120       | 12-60KΩ                         |

| 400-120AC | 400       | 40-200KΩ                        |
| 416-120AC | 416       | 42-210KΩ                        |
| 440-120AC | 440       | 44-220KΩ                        |
| 460-120AC | 460       | 46-230KΩ                        |
| 480-120AC | 480       | 48-240KΩ                        |
| 525-120AC | 525       | 52-260KΩ                        |
| 575-120AC | 575       | 57-285KΩ                        |
| 600-120AC | 600       | 60-300KΩ                        |

### Product Specifications

**Sensing Voltage (±10%)** — 3 phase, 3-wire. See Ordering Information.

**Control Voltage** — 120 Volts AC

**Contacts Trip Points (sensitivity)** — Screwdriver adjustable. See Ordering Information.

**Pick-up Time Delay** — 1.5 seconds approximately

**Contact Ratings** — 5 amp resistive at 120 VAC or 28 VDC

**Operating Temperature** — -40°C to +65°C

**Temperature Effects** — ± 1% over temperature range

**Power Consumption** — Sensing: —2 mA/Phase Approx., Control — 2VA at 120VAC

**Surge Withstand Capability** — In accordance with the requirements of ANSI/IEEE

### Notes:

1. Remove screw for access to the pick-up adjustment potentiometer.
2. Clockwise rotation of the adjustment potentiometer will raise the relay sensitivity.

11

Protective Relays

## WC1G Series — Grounded

Ground Fault Detectors are designed to provide very sensitive Ground-Current protection for motor, equipment and personnel from damage or electrical shock. In a ground system, the leakage current is monitored through a toroidal or doughnut current transformer placed around the supply conductors to a motor, transformer, equipment or outlets. Since the sums of the current in a system add to zero, the relay is responsive only to ground-fault current.

### Operation

The output contacts are shown in de-energized position. They will change state when these conditions are met:

1. Control voltage is applied.
2. Leakage current exceed the trip setting.

### Product Specifications

**CT Window Diameter** — 1.7 inches (std) or can be specified by customer

**Leakage Current Range** — 10 to 60 mA

**Control Voltage** — See Ordering Information

**Output Contacts** — One set N.C., one set N.O.

**Operating Temperature** — 40°C to +65°C

**Contact Ratings** — 10 amp resistive at 250 Vac, 8 amp. resistive @ 30 Vdc

### Notes:

1. Remove screw for access to the pick-up adjustment potentiometer.
2. Clockwise rotation of the adjustment potentiometer will raise the relay sensitivity.

**Note:** Dimensions in inches. Multiply values by 25.4 for dimensions in mm.

### REVERSE POWER RELAYS

#### AC, SINGLE PHASE

|        |   |
|--------|---|
| 710-HX | 120/220/266VAC, 125VDC 3A Control           |
| 710-PX | 120/220/266VAC, 0.2-1.0A, Spike Suppression |
| 710-1X | 120/220/266VAC, 125VDC 1/4A Control         |
| 710-3X | 120VAC (L-N), 1 Phase, 3-5A                 |

#### 120/220/266VAC. SINGLE PHASE TIME DELAY

|           |   |
|-----------|---|
| 710TD-1X  | 0.05-0.25A, 0.5-10 Sec. T.D. with Knobs |
| 710TD-5X  | 2 N.O. Contacts                         |
| 710TD-7X  | 60Hz, Reverse Inductive                 |
| 710TD-7PX | Similar to 710TD-7X with Suppression    |
| 710TD-8X  | Similar to 710TDX with -55F to +150F    |
| 710TD-9X  | Similar to 710TDX with Suppression      |
| 710TD-12X | Similar to 710TDX, 125VDC 2A Contacts   |
| 710TD-14X | 50Hz, Reverse Inductive                 |
| 720TD-14X | 120 V, L-L, 50Hz, Reverse Inductive     |
| 721TD-14X | 230 V, L-L, 50Hz, Reverse Inductive     |
| 722TD-14X | 380 V, L-L, 50Hz, Reverse Inductive     |
| 723TD-14X | 460 V, L-L, 50Hz, Reverse Inductive     |
| 724TD-14X | 575 V, L-L, 50Hz, Reverse Inductive     |

|           |                                     |
|-----------|-------------------------------------|
| 725TD-14X | 415 V, L-L, 50Hz, Reverse Inductive |
| 726TD-14X | 100 V, L-L, 50Hz, Reverse Inductive |
| 727TD-14X | 185 V, L-L, 50Hz, Reverse Inductive |

### PHASE SEQUENCE RELAYS

#### AC, THREE PHASE

|         |  |
|---------|--|
| 900-2PX | 208-230VAC, Spike Suppression                            |
| 900-4X  | 208VAC, 50/60 Hz   |
| 900-5X  | 120VAC, 50/60Hz  |
| 900-8X  | 120VAC, 60 Hz, 125VDC 2A Contacts                        |
| 900-10X | 120VAC, 60 Hz, Spike Suppression                         |
| 901-1X  | 440VAC, 60 Hz, 5A Contacts                               |
| 901-5X  | 575VAC, Porcelain Term., AZ Relay                        |
| 901-6X  | 460VAC, 60 Hz, Spike Suppression                         |
| 901-SX  | 440VAC, 55-65HZ, HI-Shock                                |
| 910-1X  | 220/440VAC, 60 Hz, N.O. Contacts                         |
| 910-2X  | 220/440VAC, 60 Hz, Reversed Contact Operation            |
| 910-3X  | 220/440VAC, 60 Hz, Porcelain Term., Sigma Relay          |
| 920X    | 380VAC, 50 Hz  |
| 920-1X  | 380VAC, 50 Hz, Mounting per 21-037                       |
| 920-2X  | 380VAC, 50 Hz, Porcelain Terminals, Sigma Relay          |
| 920-3X  | 416VAC, 50 Hz, 5A Contacts                               |
| 920-5X  | 220/380VAC, 50 Hz  |
| 920-6X  | 440VAC, 50 Hz  |
| 930X    | 208VAC, 400 Hz   |
| 930-1X  | 208VAC, 400Hz, 2A at 28VDC Contacts, Energized A-B-C, 5A |
| 930-3X  | 400VAC, 400Hz  |
| 930-4X  | 400VAC, 2 N.C. Contacts, -51C to +71C                    |
| 931X    | 120VAC, 400 Hz.  |
| 932-5X  | 115/200VAC, 400Hz, 2A Contact, Hi-Shock                  |
| 932-7X  | 230/400VAC, 400Hz  |

### PHASE FAILURE RELAYS

|      |                                    |
|------|------------------------------------|
| 980X | 120VAC, 60 Hz, no T.D. on Starting |
| 981X | 230VAC, 60 Hz, no T.D. on Starting |
| 982X | 460VAC, 60 Hz, no T.D. on Starting |
| 983X | 380VAC, 60 Hz, no T.D. on Starting |
| 984X | 575VAC, 60 Hz, no T.D. on Starting |
| 985X | 525VAC, 60 Hz, no T.D. on Starting |

|          |   |
|----------|---|
| 1980X    | 120VAC, 60 Hz                                 |
| 1981X    | 230VAC, 60 Hz                                 |
| 1982X    | 460VAC, 60 Hz                                 |
| 1983X    | 380VAC, 50 Hz                                 |
| 1984X    | 575VAC, 60 Hz                                 |
| 1985X    | 525VAC, 60 Hz                                 |
| 1986X    | 415VAC, 50 Hz                                 |
| 1987X    | 380VAC, 60 Hz                                 |
| SUFFIX:  | "-S": Time Delay (0.5 - 30 Sec.)              |
|          | "-3S": Factory Set Time Delay (0-60 Sec.)     |
| 1981-1SX | 230VAC, Similar to 1981X except 50 Hz         |
| 1980-2SX | 120VAC, Similar to 1980X except N.C. Contacts |

#### AC, THREE PHASE, VOLTAGE SENSITIVE

|            |                                      |
|------------|--------------------------------------|
| 1003X-60HZ | 380VAC, Similar to 1003X except 60Hz |
| 1009X      | 415VAC, 50 Hz                        |
| 1010X      | 208VAC, 50 Hz                        |
