

**FEATURES/BENEFITS**

- Random and zero-cross models available for all applications
- Low zero-cross turn-on voltage
- Input and output protection and control LED standard
- IP20 touch-proof flaps
- Connectors for power wiring and heat sinks available
- Designed in conformity with EN60947-4-3 (IEC947-4-3) and EN60950/VDE0805 (Reinforced Insulation)

| Part No.  | Load Voltage | Load Current | Control Voltage | Switch Type |
|-----------|--------------|--------------|-----------------|-------------|
| SH24D25   | 12-275 Vac   | 25A          | 3-32 Vdc        | Zero Cross  |
| SH24A25   | 12-275 Vac   | 25A          | 20-265 Vac/Vdc  | Zero Cross  |
| SH24A25T5 | 12-275 Vac   | 25A          | 20-265 Vac/Vdc  | Zero Cross  |
| SH24R50   | 12-275 Vac   | 50A          | 3-32 Vdc        | Random      |
| SH24D50   | 12-275 Vac   | 50A          | 3-32 Vdc        | Zero Cross  |
| SH48D35   | 24-510 Vac   | 35A          | 3.5-32 Vdc      | Zero Cross  |
| SH48D50   | 24-510 Vac   | 50A          | 3.5-32 Vdc      | Zero Cross  |
| SH48A50   | 24-510 Vac   | 50A          | 20-265 Vac/Vdc  | Zero Cross  |
| SH48D95   | 24-510 Vac   | 95A          | 3.5-32 Vdc      | Zero Cross  |
| SH48A95   | 24-510 Vac   | 95A          | 20-265 Vac/Vdc  | Zero Cross  |
| SH48R125  | 24-510 Vac   | 125A         | 3.5-32 Vdc      | Random      |
| SH48D125  | 24-510 Vac   | 125A         | 3.5-32 Vdc      | Zero Cross  |
| SH48A125  | 24-510 Vac   | 125A         | 20-265 Vac/Vdc  | Zero Cross  |
| SH60D50   | 24-690 Vac   | 50A          | 3.5-32 Vdc      | Zero Cross  |
| SH60D125  | 24-690 Vac   | 125A         | 3.5-32 Vdc      | Zero Cross  |

Thermal grease or pad

DIN Rail Adapter  
Teledyne P/N DL12

**Mounting**  
HIPpak SSRs must be mounted on heat sinks. A large range of heat sinks is available. For heat-sink mounting, use thermal grease or a thermal pad with high conductivity specified by Teledyne.

Thermal Pad  
Teledyne P/N –12

Removable IP20 touch-proof

**Typical Loads (Random)**

SH relays with random turn-on are designed for high inductive loads or phase angle control applications. Our data sheet lists nominal current of power thyristors corresponding to a resistive load (AC-51). Depending on the loads, check the inrush current at turn ON and possible overvoltages at turn OFF.

**Main applications:**

- AC-55b — Incandescent or infrared lamps. Inrush current is generally 10 times  $I_n$  during few 10ms. Random relays often use in-phase angle controllers or soft-starters with the right control.
- AC-53 — Three-phase motors. 2 or 3 random turn-on relays can drive such motors.
- AC-56a — Transformer loads. Very high inrush current up to 100 times  $I_n$ . Use a random turn-on SSR like the SH.

The table below lists recommended current values for proper lifetime expectancy.

| SSR Model | AC-53 Current (motor) | AC-55b Current (lamp) | AC-55b Current (transformer) | AC-55b Current (capacitor) |
|-----------|-----------------------|-----------------------|------------------------------|----------------------------|
| 12A       | 2.5A                  | 2.5A                  | 0.4A                         | XXX                        |
| 25A       | 5A                    | 5A                    | 1A                           | XXX                        |
| 35A       | 9A                    | 9A                    | 2A                           | XXX                        |
| 50A       | 12A                   | 12A                   | 3A                           | 13A                        |
| 75A       | 16A                   | 16A                   | 6A                           | 24A                        |
| 95A       | 24A                   | 24A                   | 9A                           | 36A                        |
| 125A      | 32A                   | 32A                   | 12A                          | 48A                        |

**Typical Loads (Zero-Cross)**

SH relays with zero-cross turn-on are designed for most types of loads.

Our data sheet lists the AC-51 current value corresponding to resistive loads.

For other loads, check the inrush current at turn ON and possible overvoltages at turn OFF:

- AC-55b — Incandescent lamps. Inrush current is generally 10 times  $I_n$  during few 10ms.
- AC-55a — Electric discharge lamp. These loads often have overcurrent at turn ON and overvoltage at turn OFF, so use 400VAC SSR on 230VAC mains.
- AC-58 — One-pole motors. These loads often have overcurrent at turn ON and overvoltage at turn OFF, so use 400VAC SSR on 230VAC mains and adapt the SSR current to the starting current of the motor.
- AC-53 — Three-phase motors. 2 or 3 SH zero-cross relays can drive these motors, but generally use E3P/E3PT or other three-phase relays or SH random range.
- AC-56a — Transformer loads. Very high inrush current up to 100 times  $I_n$ . Use SH random relay or peak control SSR.
- AC-56b — Capacitor loads with very high current at turn ON and overvoltage at turn OFF. Our high-voltage relays are well adapted for high inrush current.

Protection

- To protect the SSR against a short-circuit of the load, use a fuse with a  $I^2t$  value =  $1/2 I^2t$  value specified.

EMC

Immunity:

- Our data sheets list the immunity level of our SSRs according to the main standards for these products: IEC/EN61000-4-4 and IEC/EN61000-4-5. You can compare the high immunity level with other products on the market.

Emission:

- Teledyne SSRs are designed in compliance with standards for class A equipment (Industry).
- Use of this product in domestic environments may cause radio interference. In this case the user may be required to employ additional devices to reduce noise. SSRs are complex devices that must be interconnected with other equipment (loads, cables, etc.) to form a system. Because the other equipment or interconnections may not be under Teledyne's control, it shall be the responsibility of the system integrator to ensure that systems containing SSRs comply with the requirement of any rules and regulations applicable at the system level.
- In phase angle applications, a filter adapted to the load must be necessary.
- The very low zero-cross voltage of SH relays (<12V) improves the conducted emission level in comparison with most other SSRs on the market with zero-cross voltages often higher than 50V.
