HARDWARE INSTALLATION

- 1. Pull out the SIM needle from the front panel of the router and push the SIM holder button with the SIM needle.
- 2. Pull out the SIM holder.
- 3. Insert your SIM card into the SIM holder.
- 4. Slide the SIM holder back into the router.
- 5. Attach all antennas.
- 6. Connect the power adapter to the socket on the front of the device. Then plug the other end of the power adapter into a power outlet.
- 7. Connect to the device wirelessly using SSID and password provided on the device information label or use an Ethernet cable connected to LAN port.

LOGIN TO DEVICE

- 1. To enter the router's Web interface (WebUI), type http://192.168.1.1 into the URL field of your Internet browser.
- 2. Use login information shown in image A when prompted for authentication.
- 3. After you log in, you will be prompted to change your password for security reasons. The new password must contain at least 8 characters, including at least one uppercase letter, one lowercase letter, and one digit. This step is mandatory, and you will not be able to interact with the router's WebUI before you change the password.
- 4. When you change the router's password, the Configuration Wizard will start. The Configuration Wizard is a tool used to set up some of the router's main operating parameters.
- 5. Go to the Overview page and pay attention to the Signal Strength indication (image B). To maximize the cellular performance try adjusting the antennas or changing the location of your device to achieve the best signal conditions.
