SBOS456H – SEPTEMBER 2008 – REVISED FEBRUARY 2015

REF50xxA-Q1 Low-Noise, Very Low Drift, Precision Voltage Reference

1 Features

- Qualified for Automotive Applications
- Low Temperature Drift
  - Standard Grade: 8 ppm/°C (max)
- High Accuracy
  - Standard Grade: 0.1% (max)
- Low Noise: 3 μV_{PP}/V
- Excellent Long-Term Stability:
  - 5 ppm/1000 hr (typ) after 1000 hours
- High Output Current: ±10 mA
- Temperature Range: –40°C to 125°C

2 Applications

- 16-Bit Data Acquisition Systems
- ATE Equipment
- Industrial Process Control
- Medical Instrumentation
- Optical Control Systems
- Precision Instrumentation

3 Description

The REF50xxA-Q1 family of devices is low-noise, low-drift, very-high precision-voltage reference. These reference devices are capable of both sinking and sourcing, and are very robust with regard to line and load changes.

Excellent temperature drift (3 ppm/°C) and high accuracy (0.05%) are achieved using proprietary design techniques. These features combined with very low noise make the REF50xxA-Q1 family of devices ideal for use in high-precision data acquisition systems.

Each reference voltage is available in a standard-grade versions. The devices are offered in SO-8 packages and are specified from –40°C to 125°C.

Device Information(1)

PART NUMBER	PACKAGE	OUTPUT VOLTAGE
REF5020A-Q1	SOIC (8)	2.048 V
REF5025A-Q1		2.5 V
REF5030A-Q1		3 V
REF5040A-Q1		4.096 V
REF5045A-Q1		4.5 V
REF5050A-Q1		5 V

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Table of Contents

5 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision G (October 2013) to Revision H — **Page**

- Added the *Pin Configuration and Functions* section, *Recommended Operating Conditions* table, *Thermal Information* table, *Feature Description* section, *Device Functional Modes* section, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section ... 1
- Added *A-Q1* to the end of the device numbers ... 1
- Changed the MIN and MAX values for the REF5040 initial accuracy parameter in the *Electrical Characteristics* table ... 5

Changes from Revision F (September 2011) to Revision G — **Page**

- Deleted reference to *high grade* throughout the document ... 1
- Deleted *Package/Ordering Information* table from datasheet ... 4
- Deleted references to the MSOP-8 package and *High-Grade* from the *THERMAL HYSTERESIS* section of the *ELECTRICAL CHARACTERISTICS: ALL DEVICES* table ... 6
- Deleted references to the MSOP-8 package from the *LONG-TERM STABILITY* section of the *ELECTRICAL CHARACTERISTICS: ALL DEVICES* table ... 6
- Deleted graphs for MSOP-8 package from *TYPICAL CHARACTERISTICS* section ... 9

Changes from Revision E (August 2011) to Revision F — **Page**

- Added REF5045AQDRQ1 HBM ESD rating of 1000 V ... 4

Changes from Revision D (October, 2010) to Revision E **Page**

- Added *Thermal Hysteresis* parameters and specifications 6
- Added *Long-Term Stability* parameters and specifications 6
- Added Figure 22 through Figure 24 9
- Added *Thermal Hysteresis* section 13
- Revised *Noise Performance* section; added paragraph with links to applications articles 14

NC	7	—	No internal connection. Do not use.
TEMP	3	O	Temperature-dependent voltage output
TRIM/NR	5	I	Trim and noise reduction for ±15-mV output adjustment
V_{IN}	2	I	Input supply voltage
V_{OUT}	6	O	Reference voltage output

7 Specifications

7.1 Absolute Maximum Ratings(1)

	MIN	MAX	UNIT
Input voltage		18	V
Output short-circuit		30	mA
Operating temperature	–40	125	°C
Junction temperature (T_J max)		150	°C
Storage temperature (T_{stg})	–65	150	°C

(1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.

7.2 ESD Ratings

			VALUE	UNIT
REF5020A-Q1, REF5040A-Q1, AND REF5050A-Q1				
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per AEC Q100-002(1)	±500	V
		Charged-device model (CDM), per AEC Q100-011	±1000	
		Machine Model (MM)	200	
REF5030A-Q1 AND REF5045A-Q1				
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per AEC Q100-002(1)	±1000	V
		Charged-device model (CDM), per AEC Q100-011	±1000	
		Machine Model (MM)	200	

(1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{IN}	Supply input voltage	V_{OUT} + 0.2 (1)	18	V

(1) For V_{OUT} ≤ 2.5 V, the minimum supply voltage is 2.7 V.

7.4 Thermal Information

THERMAL METRIC (1)		D (SOIC) 8 PINS	UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	107.1	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	48.8	
$R_{\theta JB}$	Junction-to-board thermal resistance	48.3	
ψ_{JT}	Junction-to-top characterization parameter	6.8	
ψ_{JB}	Junction-to-board characterization parameter	47.6	

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, SPRA953.

7.5 Electrical Characteristics: Per Device

T_A = 25°C, I_{LOAD} = 0, C_L = 1 µF, V_{IN} = (V_{OUT} + 0.2 V) to 18 V (unless otherwise noted).

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
REF5020 (V_{OUT} = 2.048 V) (1)						
V_{OUT}	Output voltage	2.7 V < V_{IN} < 18 V		2.048		V
	Initial accuracy, standard grade		–0.1%		0.1%	
	Output voltage noise	f = 0.1 Hz to 10 Hz		6		μV_{PP}
REF5025 (V_{OUT} = 2.5 V)						
V_{OUT}	Output voltage			2.5		V
	Initial accuracy, standard grade		–0.1%		0.1%	
	Output Voltage Noise	f = 0.1 Hz to 10 Hz		7.5		μV_{PP}
REF5030 (V_{OUT} = 3 V)						
V_{OUT}	Output voltage			3		V
	Initial accuracy, standard grade		–0.1%		0.1%	
	Output voltage noise	f = 0.1 Hz to 10 Hz		9		μV_{PP}
REF5040 (V_{OUT} = 4.096 V)						
V_{OUT}	Output voltage			4.096		V
	Initial accuracy, standard grade		–0.1%		0.1%	
	Output voltage noise	f = 0.1 Hz to 10 Hz		12		μV_{PP}
REF5045 (V_{OUT} = 4.5 V)						
V_{OUT}	Output voltage			4.5		V
	Initial accuracy, standard grade		–0.1%		0.1%	
	Output voltage noise	f = 0.1 Hz to 10 Hz		13.5		μV_{PP}
REF5050 (V_{OUT} = 5 V)						
V_{OUT}	Output voltage			5		V
	Initial accuracy, standard grade		–0.1%		0.1%	
	Output voltage noise	f = 0.1 Hz to 10 Hz		15		μV_{PP}

(1) For V_{OUT} ≤ 2.5 V, the minimum supply voltage is 2.7 V.

7.6 Electrical Characteristics: All Devices

Boldface limits apply over the specified temperature range, **T_A = –40°C to 125°C.**
T_A = 25°C, I_{LOAD} = 0, C_L = 1 µF, V_{IN} = (V_{OUT} + 0.2 V) to 18 V (unless otherwise noted).

PARAMETER			TEST CONDITIONS	MIN	TYP	MAX	UNIT
dV_{OUT}/dT	Output voltage temperature drift, standard grade		Over temperature		3	8	ppm/°C
dV_{OUT}/dV_{IN}	Line regulation	REF5020 only(1)	V_{IN} = 2.7 V to 18 V		0.1	1	ppm/V
		All other devices	V_{IN} = V_{OUT} + 0.2 V		0.1	1	ppm/V
		All devices	Over temperature		0.2	1	ppm/V
dV_{OUT}/dI_{LOAD}	Load regulation	REF5020 only	–10 mA < I_{LOAD} < +10 mA, V_{IN} = 3 V		20	30	ppm/mA
		All other devices	–10 mA < I_{LOAD} < +10 mA, V_{IN} = V_{OUT} + 0.75 V		20	30	ppm/mA
		All devices	Over temperature, –10 mA < I_{LOAD} < +10 mA			50	ppm/mA
I_{SC}	Short-circuit current		V_{OUT} = 0 V		25		mA
	Thermal hysteresis, (2) standard grade		Cycle 1		10		ppm
			Cycle 2		5		ppm
	Long-Term Stability		0 to 1000 hours		90		ppm/1000 hr
			1000 to 2000 hours		10		ppm/1000 hr
	Voltage output, TEMP pin		At T_A = 25°C		575		mV
	Temperature sensitivity , TEMP pin		Over temperature		2.64		mV/°C
	Turn-on settling time		To 0.1% with C_L = 1 µF		200		µs
V_S	Power supply voltage		See Note (1)	V_{OUT} + 0.2(1)		18	V
	Power supply, quiescent current				0.8	1	mA
			Over temperature			1.2	mA
TEMPERATURE RANGE							
	Specified range			–40		125	°C
	Operating range			–55		125	°C
	Thermal resistance				150		°C/W

(1) For V_{OUT} ≤ 2.5 V, the minimal supply voltage is 2.7 V.
(2) The *Thermal Hysteresis* section explains the thermal hysteresis procedure in detail.

7.7 Typical Characteristics

T_A = 25°C, I_{LOAD} = 0, V_S = V_{OUT} + 0.2 V (unless otherwise noted). For V_{OUT} ≤ 2.5 V, the minimum supply voltage is 2.7 V.

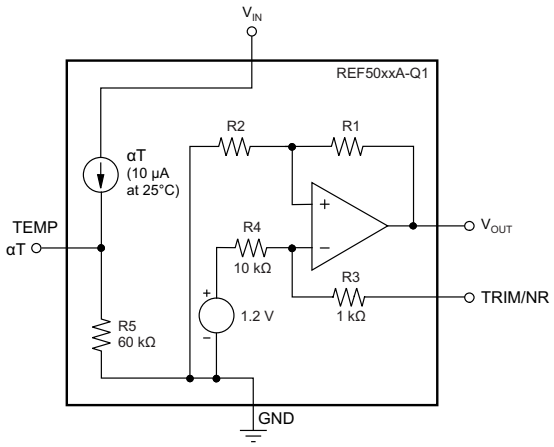
8 Detailed Description

8.1 Overview

The REF50xxA-Q1 family of devices is a low-noise, precision-bandgap voltage reference that is specifically designed for excellent initial voltage accuracy and drift. See the *Functional Block Diagram* section for a simplified block diagram of the REF50xxA-Q1 family of devices.

8.2 Functional Block Diagram



8.3 Feature Description

8.3.1 Supply Voltage

The REF50xxA-Q1 family of voltage references features extremely low dropout voltage. With the exception of the REF5020A-Q1 device, which has a minimum supply requirement of 2.7 V, these references can operate with a supply of 200 mV above the output voltage in an unloaded condition. For loaded conditions, Figure 6 in the *Typical Characteristics* section shows a typical dropout voltage versus load plot.

8.3.2 Using the TRIM/NR Pin

The REF50xxA-Q1 family of devices provides a very accurate voltage output. However, V_{OUT} can be adjusted to reduce noise and shift the output voltage from the nominal value by configuring the trim and noise reduction pin (TRIM/NR, pin 5). The TRIM/NR pin provides a ±15-mV adjustment of the device bandgap, which produces a ±15-mV change on the V_{OUT} pin. Figure 25 shows a typical circuit using the TRIM/NR pin to adjust V_{OUT}. When using this technique, the temperature coefficients of the resistors can degrade the temperature drift at the output.

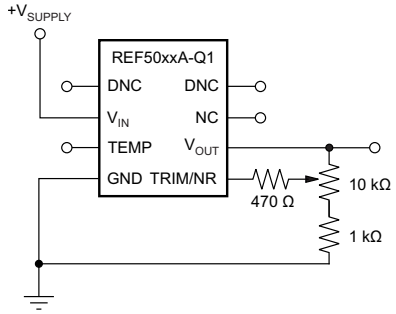


Figure 25. V_{OUT} Adjustment Using TRIM/NR Pin

Feature Description (continued)

The REF50xxA-Q1 family of devices allows access to the bandgap through the TRIM/NR pin. Placing a capacitor from the TRIM/NR pin to GND (as shown in Figure 26) in combination with the internal 1-kΩ resistor creates a low-pass filter that lowers the overall noise measured on the V_{OUT} pin. A capacitance of 1 µF is suggested for a low-pass filter with a corner frequency of 14.5 Hz. Higher capacitance results in a lower cutoff frequency.

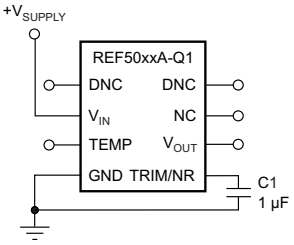

Figure 26. Noise Reduction Using TRIM/NR Pin

8.3.3 Temperature Drift

The REF50xxA-Q1 family of devices is designed for minimal drift error, which is defined as the change in output voltage over temperature. The drift is calculated using the box method. Use Equation 1 to calculate the drift.

$$\text{Drift} = \left(\frac{V_{OUTMAX} - V_{OUTMIN}}{V_{OUT} \times \text{Temp Range}} \right) \times 10^6 (\text{ppm}) \quad (1)$$

The REF50xxA-Q1 family of devices features a maximum drift coefficient of 8 ppm/°C for the standard-grade.

8.3.4 Temperature Monitoring

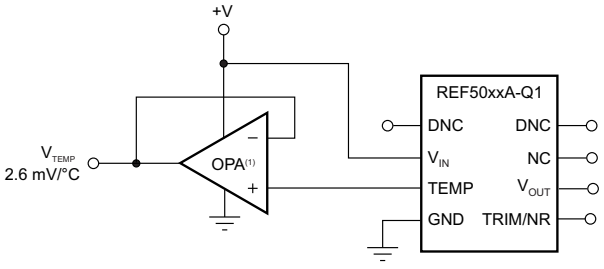
The temperature output pin (TEMP, pin 3) provides a temperature-dependent voltage output with approximately 60-kΩ source impedance. As shown in Figure 8, the output voltage follows the nominal relationship:

$$V_{TEMP\ PIN} = 509\ \text{mV} + 2.64 \times T(°C) \quad (2)$$

This pin indicates general chip temperature, accurate to approximately ±15°C. Although this pin is not generally suitable for accurate temperature measurements, it can be used to indicate temperature changes or for temperature compensation of analog circuitry. A temperature change of 30°C corresponds to an approximate 79-mV change in voltage at the TEMP pin.

The TEMP pin has high output impedance (see the *Functional Block Diagram* section). Loading this pin with a low-impedance circuit induces a measurement error; however, it does not have any effect on V_{OUT} accuracy.

To avoid errors caused by low-impedance loading, buffer the TEMP pin output with a suitable low-temperature drift op amp, such as the OPA333, OPA335, or OPA376, as shown in Figure 27.



(1) Low drift op amp, such as the OPA333, OPA335, or OPA376 device.

Figure 27. Buffering the TEMP Pin Output

8.4 Device Functional Modes

The REF50xxA-Q1 family of devices can only operate in an on or off mode. As long as a sufficient input supply voltage is made available to device, the device performs in standard operation. The device cannot be placed in a low power or shutdown mode.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

9.1.1 Thermal Hysteresis

Thermal hysteresis for the REF50xxA-Q1 family of devices is defined as the change in output voltage after operating the device at 25°C, cycling the device through the specified temperature range, and returning to 25°C. Use Equation 3 to calculate the thermal hysteresis.

$$V_{HYST} = \left(\frac{|V_{PRE} - V_{POST}|}{V_{NOM}} \right) \cdot 10^6 \text{ (ppm)} \quad (3)$$

where

- V_{HYST} = thermal hysteresis (in units of ppm)
- V_{NOM} = the specified output voltage
- V_{PRE} = output voltage measured at 25°C pretemperature cycling
- V_{POST} = output voltage measured after the device has been cycled from 25°C through the specified temperature range of –40°C to +125°C and returned to 25°C

9.2 Typical Applications

9.2.1 Standalone Applications

Figure 28 shows the typical connections for the REF50xxA-Q1 family of devices.

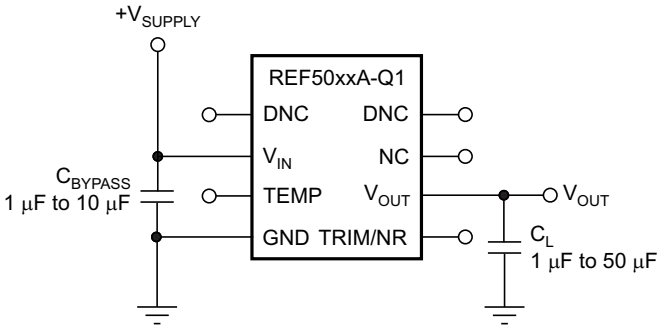


Figure 28. Basic Connections

Typical Applications (continued)

9.2.1.1 Design Requirements

A supply bypass capacitor with a value between 1 µF to 10 µF is recommended. A 1-µF to 50-µF, low-ESR output capacitor (C_L) must be connected from V_{OUT} to GND. The ESR value should be less than or equal to 1.5 Ω. The ESR minimizes gain peaking of the internal 1.2-V reference and thus reduces noise at the V_{OUT} pin.

9.2.1.2 Detailed Design Procedure

9.2.1.2.1 Power Dissipation

The REF50xxA-Q1 family of devices is specified to deliver current loads of ±10 mA over the specified input voltage range. The temperature of the device increases according Equation 4.

$$T_J = T_A + P_D \times R_{\theta JA}$$

where

- T_J = Junction temperature (°C)
- T_A = Ambient temperature (°C)
- P_D = Power dissipated (W)
- $R_{\theta JA}$ = Junction-to-ambient thermal resistance (°C/W) (4)

The junction temperature of the REF50xxA-Q1 family of devices must not exceed the absolute maximum rating of 150°C.

9.2.1.2.2 Noise Performance

The *Electrical Characteristics: Per Device* section specifies the typical voltage noise at 0.1 Hz to 10 Hz for each member of the REF50xxA-Q1 family of devices. The noise voltage increases with output voltage and operating temperature. Additional filtering can be used to improve output noise levels, although care should be taken to ensure the output impedance does not degrade performance.

For additional information about how to minimize noise and maximize performance in mixed-signal applications, such as data converters, refer to the series of *Analog Applications Journal* articles entitled, *How a Voltage Reference Affects ADC Performance*. See the *Related Documentation* section for a list of these articles.

9.2.1.3 Application Curves

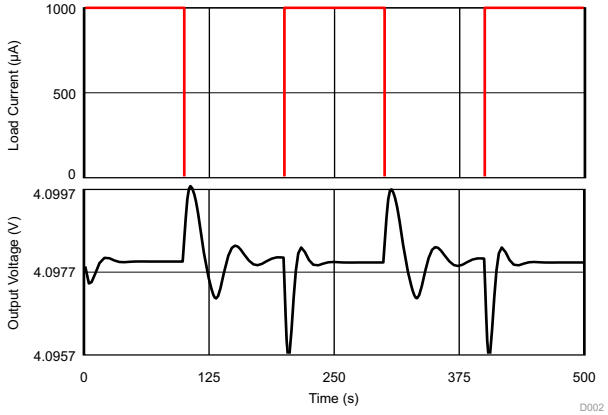

Figure 29. Transient Behavior of V_{OUT}

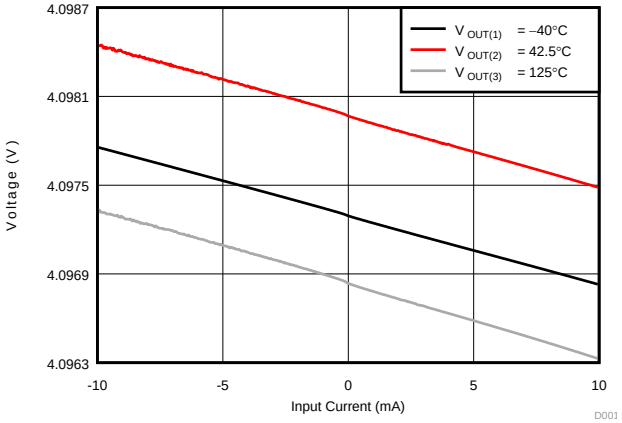

Figure 30. DC Analysis of V_{OUT} Across Various Temperatures and the Full Output-Current Range

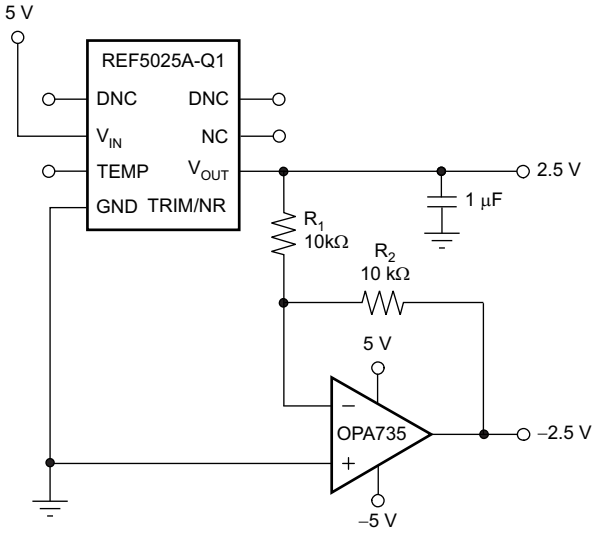
Typical Applications (continued)

9.2.2 Negative-Reference Voltage Applications

For applications requiring a negative and positive reference voltage, the REF50xxA-Q1 family of devices and the OPA735 device can be used to provide a dual-supply reference from a 5-V supply. Figure 31 shows the REF5025A-Q1 used to provide a 2.5-V supply reference voltage. The low drift performance of the REF50xxA-Q1 family of devices complements the low offset voltage and zero drift of the OPA735 device to provide an accurate solution for split-supply applications. Care must be taken to match the temperature coefficients of R_1 and R_2.



NOTE: Bypass capacitors not shown.

Figure 31. The REF5025A-Q1 and OPA735 Create Positive and Negative Reference Voltages

9.2.3 Data-Acquisition Applications

Data acquisition systems often require stable voltage references to maintain accuracy. The REF50xxA-Q1 family of devices features low noise, very low drift, and high initial accuracy for high-performance data converters. Figure 32 shows the REF5040A-Q1 in a basic data acquisition system.

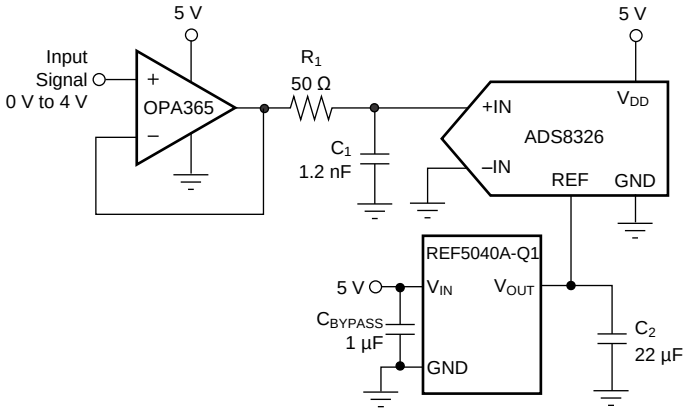


Figure 32. Basic Data Acquisition System

10 Power Supply Recommendations

The REF50xxA-Q1 family of voltage references features extremely low dropout voltage. With the exception of the REF5020A-Q1 device, which has a minimum supply requirement of 2.7 V, these references can operate with a supply of 200 mV above the output voltage in an unloaded condition. A supply bypass capacitor with a value ranging between 0.1 µF and 10 µF is recommended.

11 Layout

11.1 Layout Guidelines

Refer to Figure 33 and use the following guidelines for proper layout design:

- Connect low-ESR, 0.1-µF ceramic bypass capacitors at the V_{IN} and V_{OUT} pins.
- Decouple other active devices in the system per the device specifications.
- Use a solid ground plane to help distribute heat and reduce electromagnetic-interference (EMI) noise pickup.
- Place the external components as close to the device as possible. This configuration prevents parasitic errors (such as the Seebeck effect) from occurring.
- Minimize trace length between the reference and bias connections to the end device to reduce noise pickup.
- Do not run sensitive analog traces in parallel with digital traces. Avoid crossing digital and analog traces if possible and only make perpendicular crossings when absolutely necessary.

11.2 Layout Example

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

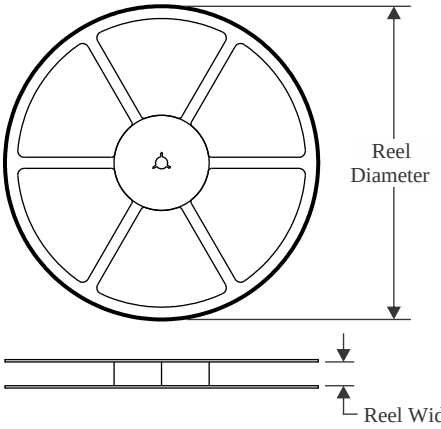
(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

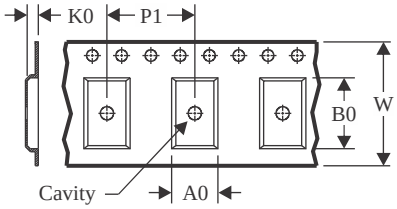
(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

TAPE AND REEL INFORMATION

REEL DIMENSIONS

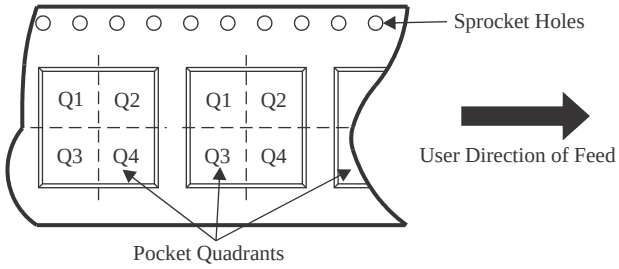


TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE



*All dimensions are nominal

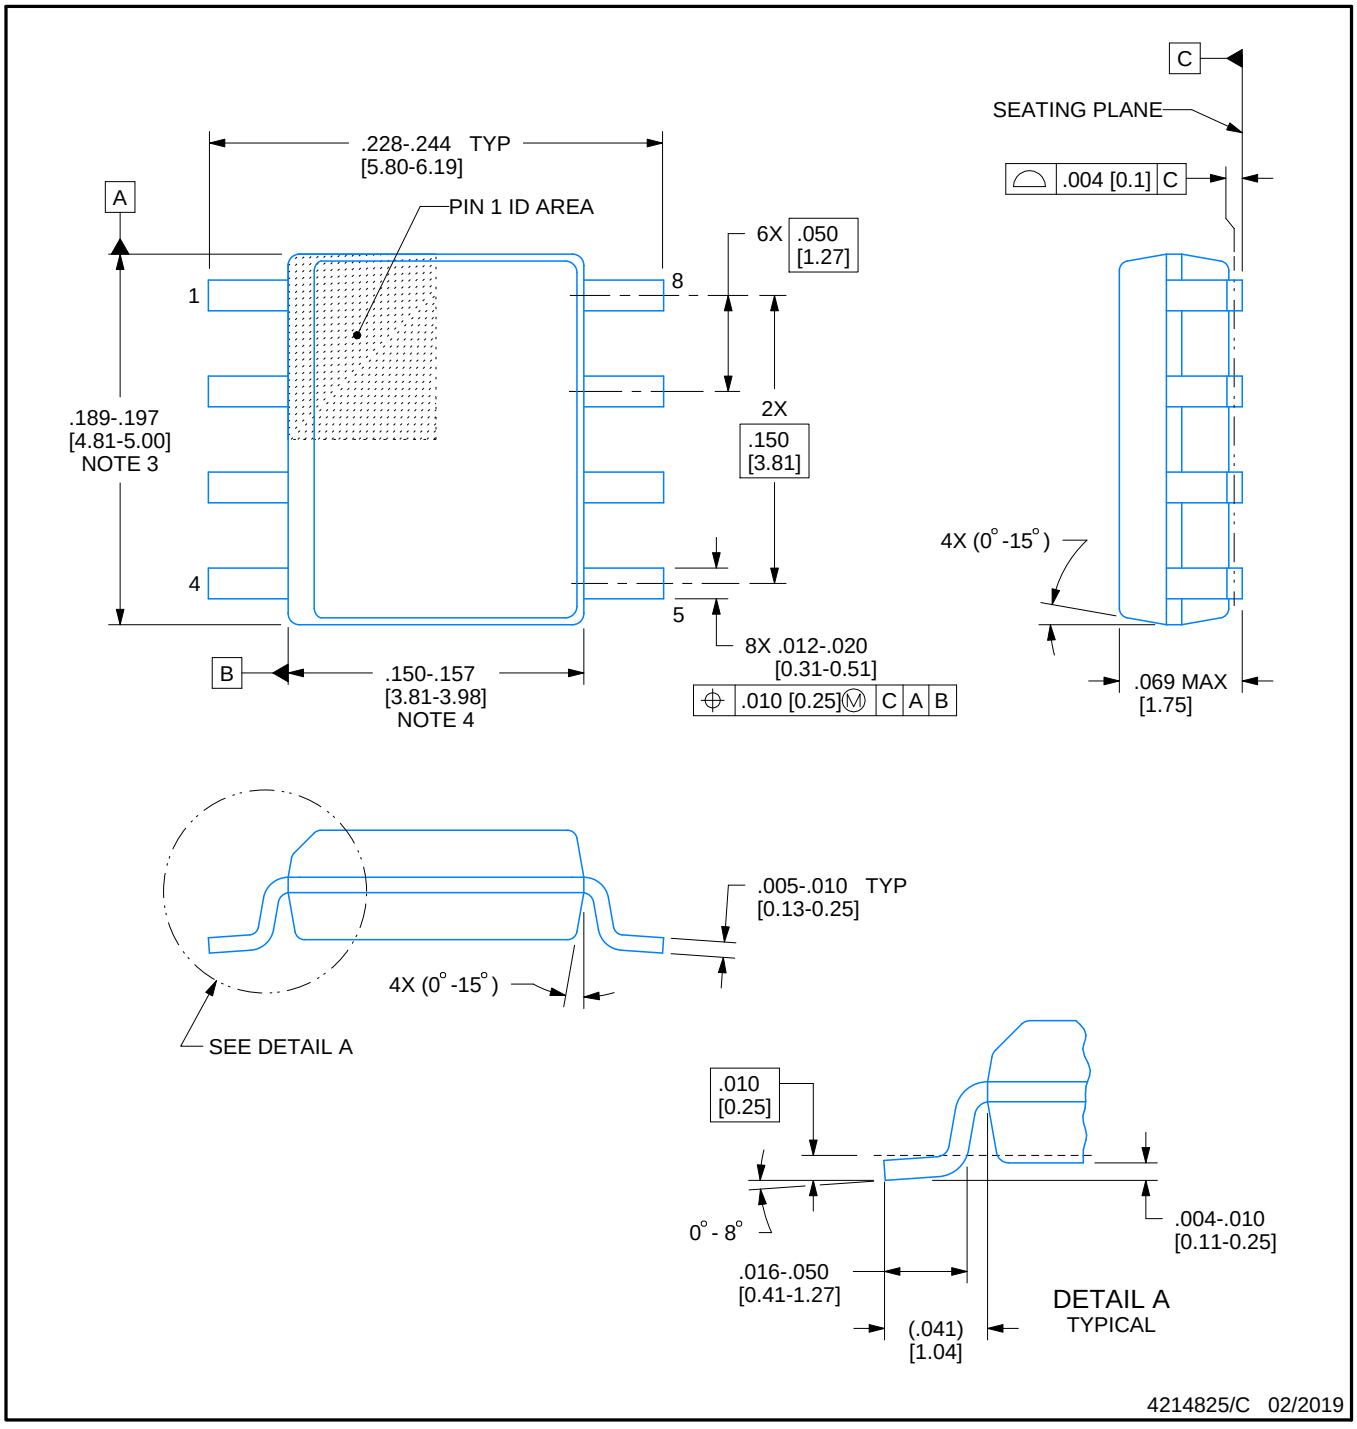
PACKAGE OUTLINE

D0008A

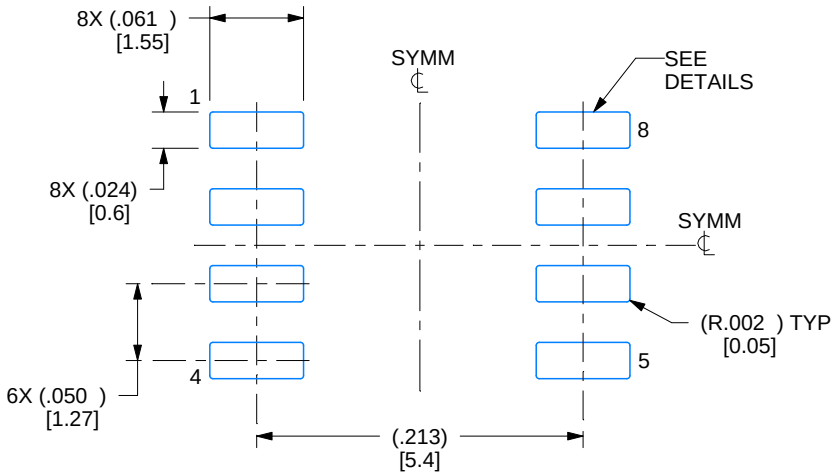
SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

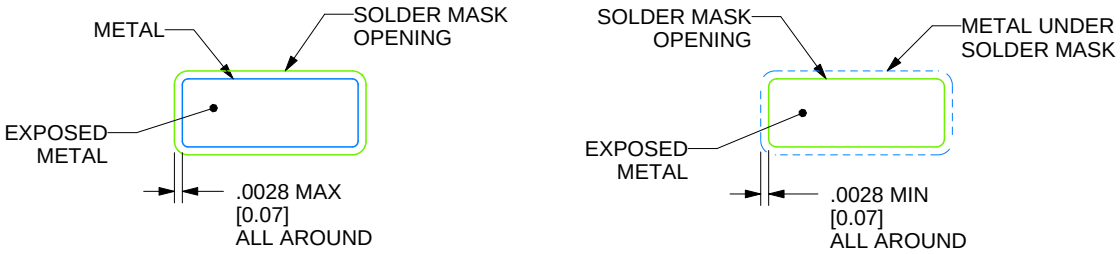


NOTES:

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.



LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:8X



SOLDER MASK DETAILS

4214825/C 02/2019

NOTES: (continued)

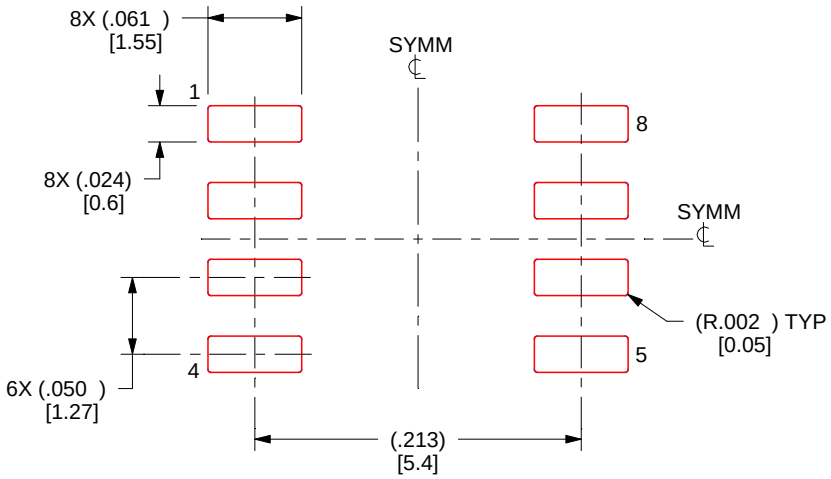
6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT



SOLDER PASTE EXAMPLE
BASED ON .005 INCH [0.125 MM] THICK STENCIL
SCALE:8X

4214825/C 02/2019

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.
