

Low Power, 3.0kV rms Dual I²C Isolators

FEATURES

- Bidirectional I²C communication
- Ultra-low power consumption
- Supports up to 2MHz operation
- Open-drain interfaces
 - Side 1 outputs with 3.5 mA sink current
 - Side 2 outputs with 35 mA sink current
- 3.0V to 5.5V supply/logic levels
- 3000Vrms for 1 minute per UL 1577
- CSA Component Acceptance Notice 5A
 - DIN VDE V 0884-11:2017-01
 - V_{IORM} = 565V peak
- CQC certification per GB4943.1-2011
- AEC-Q100 qualification
- Wide temperature range: -40°C to 125°C
- RoHS-compliant, NB SOIC-8 package

APPLICATIONS

- Isolated I²C, SMBus, PMBus interfaces
- Multilevel I²C interfaces
- Electric and Hybrid-Electric Vehicles
- Open-Drain Networks
- I²C Level Shifting
- Power supplies

PIN CONFIGURATIONS AND FUNCTIONS

M1251/1261 Pin Function Descriptions

Pin No.	Name	Description
1	VDD1	Supply Voltage for Isolator Side 1.
2	SDA1	Serial data input / output, side 1.
3	SCL1	Serial clock input / output, side 1.
4	GND1	Ground 1. This pin is the ground reference for Isolator Side 1.
5	GND2	Ground 2. This pin is the ground reference for Isolator Side 2.
6	SCL2	Serial clock input / output, side 2.
7	SDA2	Serial data input / output, side 2.
8	VDD2	Supply Voltage for Isolator Side 2.

Figure 3. M1251/1261 Pin Configuration

ABSOLUTE MAXIMUM RATINGS

Table 1. Absolute Maximum Ratings^{1,2}

Parameter	Rating
Supply Voltages ($V_{DD1-GND1}$, $V_{DD2-GND2}$)	-0.5 V to +7.0 V
Signal Voltage SDA1/SCL1	-0.5 V to $V_{DDx} + 0.5$ V
Signal Voltage SDA2/SCL2	-0.5 V to $V_{DDx} + 0.5$ V
Average Output Current SDA1/SCL1 (I_{O1})	-20 mA to +20 mA
Average Output Current SDA2/SCL2 (I_{O2})	-100 mA to +100 mA
Storage Temperature (T_{ST}) Range	-55°C to +150°C
Maximum junction temperature $T_{J(MAX)}$	+150°C

Notes:

¹ All voltage values here within are with respect to the local ground pin (GND1 or GND2) and are peak voltage values.

² Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

RECOMMENDED OPERATING CONDITIONS

Table 2. Recommended Operating Conditions

Parameter	Symbol	Min	Typ	Max	Unit
Supply Voltage	V_{DDx} ¹	3		5.5	V
Input/Output Signal Voltage (V_{SDA1} , V_{SCL1} , V_{SDA2} , V_{SCL2})		0		V_{DDx} ¹	V
Low-level input voltage, side 1	V_{IL1}	0		0.47	V
High-level input voltage, side 1	V_{IH1}	$0.7 \cdot V_{DD1}$		V_{DD1}	V
Low-level input voltage, side 2	V_{IL2}	0		$0.3 \cdot V_{DD2}$	V
High-level input voltage, side 2	V_{IH2}	$0.7 \cdot V_{DD2}$		V_{DD2}	V
Output current, side 1	I_{OL1}	0.5		3.5	mA
Output current, side 2	I_{OL2}	0.5		35	mA
Capacitive load, side 1	C1			40	pF
Capacitive load, side 2	C2			400	pF
Operating frequency	f_{MAX}			2	MHz
Ambient Operating Temperature	T_A	-40		125	°C

Notes:

¹ V_{DDx} is the side voltage power supply V_{DD} , where x = 1 or 2.

Truth Tables
Table 3. M1251/1261 Truth Table

V _{ix} Input ¹	V _{DD1} State ¹	V _{DD0} State ¹	V _{ox} Output ¹
Low	Powered ²	Powered ²	Low
High	Powered ²	Powered ²	High Impedance
Open ⁴	Powered ²	Powered ²	High Impedance
Don't Care	Unpowered ³	Powered ²	High Impedance
Don't Care	Powered ²	Unpowered ³	High Impedance

Notes:

¹ V_{ix}/V_{ox} are the input/output signals of a given channel (SDA or SCL). V_{DD1}/V_{DD0} are the supply voltages on the input/output signal sides of this given channel.

² Powered means V_{DDx} ≥ 2.95 V

³ Unpowered means V_{DDx} < 2.30V

⁴ Invalid input condition as an I²C system requires that a pullup resistor to V_{DD} is connected.

SPECIFICATIONS
ELECTRICAL CHARACTERISTICS
Table 4. DC Specifications

V_{DD1} - V_{GND1} = V_{DD2} - V_{GND2} = 3.3V_{DC} ± 10% or 5V_{DC} ± 10%, T_A = 25°C, unless otherwise noted.

Parameter	Symbol	Min	Typ	Max	Unit	Test Conditions/Comments
SIDE 1 LOGIC LEVELS						
Voltage input threshold low, SDA1 and SCL1	V _{I LT1}	470	510	570	mV	
Voltage input threshold high, SDA1 and SCL1	V _{I HT1}	540	580	630	mV	
Voltage input hysteresis	V _{H YST1}	50	70		mV	V _{I HT1} - V _{I LT1}
Low-level output voltage, SDA1 and SCL1	V _{O L1}	650	720	800	mV	0.5 mA ≤ (I _{SDA1} and I _{SCL1}) ≤ 3.5 mA
Low-level output voltage to high-level input voltage threshold difference, SDA1 and SCL1	ΔV _{O IT1} ¹	60	120		mV	0.5 mA ≤ (I _{SDA1} and I _{SCL1}) ≤ 3.5 mA
SIDE 2 LOGIC LEVELS						
Voltage input threshold low, SDA2 and SCL2	V _{I LT2}	0.30* V _{DD2}		0.42* V _{DD2}	V	
Voltage input threshold high, SDA2 and SCL2	V _{I HT2}	0.58* V _{DD2}		0.69* V _{DD2}	V	
Voltage input hysteresis	V _{H YST2}	0.20* V _{DD2}	0.28* V _{DD2}		V	V _{I HT2} - V _{I LT2}
Low-level output voltage, SDA2 and SCL2	V _{O L2}			0.4	V	0.5 mA ≤ (I _{SDA2} and I _{SCL2}) ≤ 35 mA
BOTH SIDES						
Input leakage currents, SDA1, SCL1, SDA2, and SCL2	I _{IN}		0.01	10	μA	V _{SDA1} , V _{SCL1} = V _{DD1} ; V _{SDA2} , V _{SCL2} = V _{DD2}
V _{DDx} ³ Undervoltage Rising Threshold	V _{DDxUV+}	2.45	2.75	2.95	V	
V _{DDx} ³ Undervoltage Falling Threshold	V _{DDxUV-}	2.30	2.60	2.80	V	
V _{DDx} ³ Hysteresis	V _{DDxUVH}		0.15		V	

Notes:

¹ ΔV_{O IT1} = V_{O L1} - V_{I HT1}. This is the minimum difference between the output logic low level and the input logic threshold within a given component. This ensures that there is no possibility of the part latching up the bus to which it is connected.

² V_{DDx} is the side voltage power supply V_{DD}, where x = 1 or 2.

Table 5. Quiescent Supply Current

$V_{DD1} - V_{GND1} = V_{DD2} - V_{GND2} = 3.3V_{DC} \pm 10\%$ or $5V_{DC} \pm 10\%$, $T_A = 25^\circ C$, R1, R2 = Open; C1, C2 = Open (figure 17), unless otherwise noted. Test method refer to Figure 17.

APPLICATIONS INFORMATION

Overview

The inter-integrated circuit (I²C) bus is a single-ended, two wire bus for efficient inter-IC communication and is used in a wide range of applications. The I²C bus is used for communication between multiple masters or a single master and slaves. The master device controls the serial clock line (SCL) and data is bidirectional transferred on the serial data line (SDA) between master and slaves. The I²C bus can theoretically add up to 112 communication nodes, however, the number of nodes will increase the load capacitance on the bus, thereby limiting the communication distances and communication speeds. In applications, tradeoffs are often made between communication speeds, bus length, and number of nodes based on actual conditions.

The I²C bus supports data transmission in four speeds: standard mode (up to 100Kbps), fast mode (up to 400Kbps), fast mode plus (up to 1Mbps), and high-speed mode (up to 3.4Mbps). The M1251/1261 devices support all the above four communication modes.

FUNCTIONAL DESCRIPTION

The M1251/1261 devices are low-power bidirectional isolators compatible with the I²C interface and are based on **iDivider**® technology from 2PaiSemi. These devices have logic input and output buffers that are separated by using a silicon dioxide (SiO₂) barrier. These devices block high voltages and prevent noise currents from entering the control side ground, avoiding circuit interference and damaging sensitive components. Each channel output of the ISO1251/1261 devices is made open-drain to comply with the open-drain technology of I²C. Serial data line (SDA) and serial clock line (SCL) need to add pull-up resistors to ensure normal operation of the system. It is recommended that side 1 of the I²C isolator be connected to the processor and sides 2 to the bus when there are multiple nodes on the I²C bus as side 2 support up to 400 pF capacitance load.

The M1251 devices feature two bidirectional channels that have open-drain outputs, As shown in Figure 20. As a logic low on one side causes the corresponding pin on the other side to be pulled low, to avoid data-latching within the device, The output logic low (VOL1) voltages of SDA1 and SCL1 are at least 60mV higher than the input threshold high (VIHT1) of SDA1 and SCL1, As shown in Figure 21.

Because the Side 2 logic levels/thresholds are standard I²C values, multiple M1251/1261 devices connected to a bus by their Side 2 pins can communicate with each other and with other I²C compatible devices. However, because the Side 1 pin has a modified output level/ input threshold, this side of the M1251/1261 can communicate only with devices that conform to the I²C standard.

The output low voltages of M1251/1261 devices are guaranteed for sink currents of up to 35mA for side 2, and 3.5mA for side 1.

To enhance system reliability, it is recommended to connect the node with larger load capacitance and longer wires on side 2 for point-to-point communication.

Figure 20. M1261 system operation diagram

Figure 21. M1251/1261 side 1 voltage Diagram

TYPICAL APPLICATION DIAGRAM

Figure 22 shows a typical application circuit including the pull-up resistors required for both Side 1 and Side 2. Bypass capacitors with values from 0.1μF to 10μF are required between V_{DD1} and GND1 and between V_{DD2} and GND2. To enhance the robustness of a design, the user may connect a resistor (50-200 Ω) in series between R2 and C1 and between R3 and C2 if the system is excessively noisy.

The M1251/1261 are designed for operation at speeds up to 2 MHz. Due to the limited current available on side 1 and side2, operation at 2MHz limits the capacitance that can be driven at the minimum pull-up value to 40pF and 400pF.

Most applications operate at 100 kbps in standard mode or 400 kbps in fast mode. At these lower operating speeds, the limitation on the load capacitance can be significantly relaxed. If larger values for the pull up resistor are used, the maximum supported capacitance must be scaled down proportionately so that the rise time does not increase beyond the values required by the standard.
