

XC6505 Series

Low Power Consumption, High Speed 200mA LDO Regulator - 10.5V Input

■ GENERAL DESCRIPTION

Even the XC6505 series is a low power consumption such as $5.5 \mu\text{A}$, the IC is a high speed CMOS LDO regulator that features high accurate, low noise, high ripple rejection, and low dropout. The series consists of a voltage reference, an error amplifier, a driver transistor, a current limiter, a phase compensation circuit and a thermal shutdown circuit.

The CE function enables the circuit to be in stand-by mode by inputting low level signal. In the stand-by mode, the series enables the electric charge at the output capacitor C_L to be discharged via the internal switch, and as a result the V_{OUT} pin quickly returns to the V_{SS} level.

The over current protection circuit and the thermal shutdown circuit are built-in. These two protection circuits will operate when the output current reaches current limit level or the junction temperature reaches temperature detection level.

■ APPLICATIONS

- Car navigation systems
- Car audios
- Digital still cameras / Camcorders

■ FEATURES

| | |
|--------------------------------------|---|
| Maximum Output Current | : 200mA |
| Input Voltage | : 1.7V ~ 10.5V |
| Output Voltage | : 1.5V ~ 8.0V (0.1V increments) |
| Accuracy | : $\pm 1.0\%$ (2.0V~8.0V) $\pm 20\text{mV}$ (1.5V~1.9V) |
| Temperature Stability | : $\pm 30\text{ppm}/^\circ\text{C}$ |
| Dropout Voltage | : 190mV @ $V_{\text{OUT}}=3.3\text{V}$, $I_{\text{OUT}}=100\text{mA}$ |
| Low Power Consumption | : $5.5 \mu\text{A}$ (TYP.) |
| Chip Enable(CE) | : Active High $0.1 \mu\text{A}$ (Stand-by) |
| High Ripple Rejection | : 60dB@1kHz |
| Protection | : Current Limiter (300mA, TYP.) Short circuit protection (110mA, TYP.) Thermal Shutdown |
| Operating Ambient Temperature | : $-40 \sim +105^\circ\text{C}$ |
| Packages | : USP-6C, SOT-25, SOT-89-5 |
| Environmentally Friendly | : EU RoHS Compliant, Pb Free |

SOT-89-5
(TOP VIEW)

*The dissipation pad for the USP-6C package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release.

If the pad needs to be connected to other pins, it should be connected to the V_{SS} (No. 5) pin.

PIN ASSIGNMENT

| PIN NUMBER | | | PIN NAME | FUNCTIONS |
|------------|--------|----------|-----------|----------------|
| USP-6C | SOT-25 | SOT-89-5 | | |
| 1 | 1 | 4 | V_{IN} | Power Input |
| 3 | 5 | 5 | V_{OUT} | Output |
| 5 | 2 | 2 | V_{SS} | Ground |
| 6 | 3 | 3 | CE | ON/OFF Control |
| 2,4 | 4 | 1 | NC | No connection |

PRODUCT CLASSIFICATION

Ordering Information

XC6505①②③④⑤⑥-⑦^(*)

| DESIGNATOR | ITEM | SYMBOL | DESCRIPTION |

NOTE:

(* 1) Unless otherwise stated, input voltage is V_{IN}=V_{OUT(T)}^(*3)+1.0V.

(* 2) V_{OUT(E)} is defined as output voltages when an amply stabilized V_{OUT(T)}+1.0V is supplied to the V_{IN} pin while maintaining a certain I_{OUT}.

(* 3) V_{OUT(T)} is nominal output voltage

(* 4) For the specified value of the effective output voltage V_{OUT(E)} of each nominal output voltage, refer to VOLTAGE CHART E-0.

(* 5) V_{dif} = V_{IN1}^(*6)-V_{OUT1}^(*7)

(* 6) V_{IN1} is the input voltage when V_{OUT1} appears at the V_{OUT} pin while input voltage is gradually decreased.

(* 7) V_{OUT1} equals 98% of the output voltage when amply stabilized V_{OUT(T)}+1.0V are supplied to the V_{IN} pin.

(* 8) R_{DCHG} is effective for the XC6505B Series only. The XC6505A Series discharges only through the resistance R1 + R2 in the block diagram.

OPERATIONAL EXPLANATION

The voltage divided by resistors R1 & R2 is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET which is connected to the V_{OUT} pin is then driven by the subsequent output signal. The output voltage at the V_{OUT} pin is controlled and stabilized by a system of negative feedback. The current limit circuit and short protection circuit operate in relation to the level of output current and heat dissipation. Further, the IC's internal circuitry can be shutdown via the CE pin signal.

XC6505B Series

<CE Pin>

The XC6505 Series is able to shut down the regulator circuit using the CE pin signal. In the shutdown state, the V_{OUT} pin is pulled down by R1 and R2 to the V_{SS} level. In the XC6505B Series, the C_L discharge resistance is connected in parallel with R1 and R2 when power is supplied to V_{IN}, shortening the time until the V_{SS} level is reached. Operation is unstable when the CE pin is open, and thus the V_{IN} voltage or the V_{SS} voltage should be input into the CE pin. Although the logic is fixed and operation is normal as long the voltage satisfies the CE pin voltage specification, inputting an intermediate voltage may cause the supply current to increase due to the flowthrough current in the IC internal circuit.

<C_L Auto-Discharge Function>

The XC6505B type is capable of high-speed discharge of the charge that collects on the output capacitor (C_L below). This is accomplished by the N-channel MOSFET connected between the V_{OUT} and V_{SS} pins in the block diagram, and takes place when the L-level signal (IC internal circuit shutdown signal) of the CE pin is input. The C_L discharge resistance is set to 400 Ω (when V_{IN} = 10.5 V, V_{OUT} = 5.0 V typical). The C_L discharge time is determined by this C_L discharge resistance and C_L. Letting the time constant of the C_L discharge resistance R_{DCHG} and C_L be τ (τ = C × R), the output voltage after discharge by the N-channel MOSFET can be obtained from the CR discharge equation below.

$$V = V_{OUT(E)} \times e^{-t/\tau} \quad \text{or} \quad t = \tau \ln(V_{OUT(E)}/V)$$

V: Output voltage after discharge

V_{OUT(E)}: Output voltage

t: Discharge time

τ: C_L auto-discharge resistance R_{DCHG} × C_L Output capacitor value C_L

<Current Limiter, Short-Circuit Protection>

The XC6505 series' fold-back circuit operates as an output current limiter and a short protection circuit for the output pin. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. When the output pin is short-circuited to the V_{SS} pin, the current falls and reaches about 110mA.

<Thermal Shutdown>

The XC6505 Series has an internal thermal shutdown (TSD) circuit for protection against overheating. When the junction temperature reaches the detection temperature, the driver transistor is forcibly turned off. When the junction temperature falls to the release temperature with the driver transistor still in the off state, the driver transistor turns on (automatic recovery) and restarts regulator operation.

■ OPERATIONAL EXPLANATION

<Input/output capacitor>

The XC6505 Series uses an output capacitor (C_L) for phase compensation. For this reason, if a small capacitor or low withstand-voltage capacitor is used for C_L , DC bias dependence causes a smaller capacitance value, and phase shifting that results in unstable operation may occur. Exercise caution when selecting the capacitor. Recommended capacitances for the XC6505 Series are shown below.

For the input capacitor (C_{IN}), select a capacitance of 1.0 μ F or higher to stabilize the input power.

Table1 : Recommended C_L capacitances

| Manufacturer | Product Number | Capacity [μ F] | Size Unit | | Size L x W [mm] | Withstand Voltage [V] | Temperature Range [$^{\circ}$ C] |
|--------------|----------------|------------------------|-----------|------|--------------------|-----------------------------|---|
| | | | JIS | EIA | | | |
| TDK | C2012X7R1C225K | 2.2 | 2012 | 0805 | 2.0 x 1.25 | 16 | -55 ~ 125 |
| MURATA | GRM21BR71C225K | 2.2 | 2012 | 0805 | 2.0 x 1.25 | 16 | -55 ~ 125 |
| TAIYO YUDEN | EMK212B7225K | 2.2 | 2012 | 0805 | 2.0 x 1.25 | 16 | -55 ~ 125 |

■ NOTES ON USE

1. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please wire the input capacitor (C_{IN}) and the output capacitor (C_L) as close to the IC as possible.
3. If the input voltage fluctuates by 1.5 V or more and is at a slope of 0.1 V/ μ s or more, output voltage undershoot may become more pronounced. In this case, use a larger input capacitor (C_{IN}) or otherwise adjust so that the through rate is less than 0.1 V/ μ s.
4. If a small capacitor is used for the output capacitor (C_L below), capacitance loss due to DC bias dependence will become more pronounced. This will increase the tendency for phase shifting to occur, resulting in unstable operation. Test thoroughly before using.
For guidelines for the C_L capacitance, check the XC6505 recommended capacitance characteristics (refer to Operational Explanation, Input/Output Capacitors).
5. Torex places an importance on improving our products and its reliability.
However, by any possibility, we would request user fail-safe design and post-aging treatment on system or equipment.

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm² in one side)
 Copper (Cu) traces occupy 50% of the board area
 In top and back faces
 Package heat-sink is tied to the copper traces
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 5 x 0.8 Diameter

Evaluation Board (Unit: mm)

2. Power Dissipation vs. Ambient Temperature

Board Mount ($T_j \text{ max} = 125^\circ\text{C}$)

| Ambient Temperature (°C) | Power Dissipation Pd (mW) | Thermal Resistance (°C/W) |
|--------------------------|---------------------------|---------------------------|
| 25 | 1300 | 76.92 |
| 105 | 260 | |

MARKING RULE

● USP-6C

● SOT-25

● SOT-89-5

① represents product series

| MARK | PACKAGE | PRODUCT SERIES |
|------|-----------------|----------------|
| 0 | SOT-25/SOT-89-5 | XC6505*****-G |
| P | USP-6C | XC6505*****-G |

② represents type of regulator

| | MARK | | | | PRODUCT SERIES |
|-----------------------|-----------------------------|-----------------------------|-----------------------------|-----------------------------|----------------|
| | OUTPUT VOLTAGE =1.5~3.0V | OUTPUT VOLTAGE =3.1~5.0V | OUTPUT VOLTAGE =5.1~7.0V | OUTPUT VOLTAGE =7.1~8.0V | |
| TYPE OF REGULATOR "A" | 0 | 1 | 2 | 3 | XC6505A*****-G |
| TYPE OF REGULATOR "B" | 4 | 5 | 6 | 7 | XC6505B*****-G |

③ represents output voltage

| MARK | OUTPUT VOLTAGE (V) | | | MARK | OUTPUT VOLTAGE (V) | | |
|------|--------------------|------|------|------|--------------------|------|------|
| 0 | - | 3.10 | 6.10 | F | 1.60 | 4.60 | 7.60 |
| 1 | - | 3.20 | 6.20 | H | 1.70 | 4.70 | 7.70 |
| 2 | - | 3.30 | 6.30 | K | 1.80 | 4.80 | 7.80 |
| 3 | - | 3.40 | 6.40 | L | 1.90 | 4.90 | 7.90 |
| 4 | - | 3.50 | 6.50 | M | 2.00 | 5.00 | 8.00 |
| 5 | - | 3.60 | 6.60 | N | 2.10 | 5.10 | - |
| 6 | - | 3.70 | 6.70 | P | 2.20 | 5.20 | - |
| 7 | - | 3.80 | 6.80 | R | 2.30 | 5.30 | - |
| 8 | - | 3.90 | 6.90 | S | 2.40 | 5.40 | - |
| 9 | - | 4.00 | 7.00 | T | 2.50 | 5.50 | - |
| A | - | 4.10 | 7.10 | U | 2.60 | 5.60 | - |
| B | - | 4.20 | 7.20 | V | 2.70 | 5.70 | - |
| C | - | 4.30 | 7.30 | X | 2.80 | 5.80 | - |
| D | - | 4.40 | 7.40 | Y | 2.90 | 5.90 | - |
| E | 1.50 | 4.50 | 7.50 | Z | 3.00 | 6.00 | - |

④⑤ represents production lot number

01~09, 0A~0Z, 11~9Z, A1~A9, AA~AZ, B1~ZZ repeated.

(G, I, J, O, Q, W excluded)

*No character inversion used.

1. The product and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.
2. The information in this datasheet is intended to illustrate the operation and characteristics of our products. We neither make warranties or representations with respect to the accuracy or completeness of the information contained in this datasheet nor grant any license to any intellectual property rights of ours or any third party concerning with the information in this datasheet.
3. Applicable export control laws and regulations should be complied and the procedures required by such laws and regulations should also be followed, when the product or any information contained in this datasheet is exported.
4. The product is neither intended nor warranted for use in equipment of systems which require extremely high levels of quality and/or reliability and/or a malfunction or failure which may cause loss of human life, bodily injury, serious property damage including but not limited to devices or equipment used in 1) nuclear facilities, 2) aerospace industry, 3) medical facilities, 4) automobile industry and other transportation industry and 5) safety devices and safety equipment to control combustions and explosions. Do not use the product for the above use unless agreed by us in writing in advance.
5. Although we make continuous efforts to improve the quality and reliability of our products; nevertheless Semiconductors are likely to fail with a certain probability. So in order to prevent personal injury and/or property damage resulting from such failure, customers are required to incorporate adequate safety measures in their designs, such as system fail safes, redundancy and fire prevention features.
6. Our products are not designed to be Radiation-resistant.
7. Please use the product listed in this datasheet within the specified ranges.
8. We assume no responsibility for damage or loss due to abnormal use.
9. All rights reserved. No part of this datasheet may be copied or reproduced unless agreed by Torex Semiconductor Ltd in writing in advance.

TOREX SEMICONDUCTOR LTD.

X-ON Electronics

Largest Supplier of Electrical and Electronic Components
