

# XC6602 Series

## 1A, 0.5V Low Input Voltage, High Speed LDO Regulator

### ■ GENERAL DESCRIPTION

The XC6602 series is a low voltage input (0.5V) operation and provides high accuracy  $\pm 15\text{mV}/\pm 20\text{mV}$  and can supply large current efficiently due to its ultra low on-resistance even at low output voltages.

The series is ideally suited to the applications which require high current in low input/output voltages and consists of a Nch driver transistor, a voltage reference, an error amplifier, a current limiter, a fold-back circuit, a thermal shutdown (TSD) circuit, an under voltage lock out (UVLO) circuit, a soft-start circuit and a phase compensation circuit.

Output voltage is selectable in 0.1V increments within a range of 0.5V to 1.8V using laser trimming technology and ceramic capacitors can be used for the output stabilization capacitor ( $C_L$ ). The inrush current ( $I_{\text{RUSH}}$ ) from  $V_{\text{IN}}$  to  $V_{\text{OUT}}$  for charging  $C_L$  at start-up can be reduced and makes the  $V_{\text{IN}}$  stable. The soft-start time is optimized internally.

The CE function enables the output to be turned off and the series to be put in stand-by mode resulting in greatly reduced power consumption. At the time of entering the stand-by mode, the series enables the electric charge at the output capacitor ( $C_L$ ) to be discharged via the internal switch. As a result the  $V_{\text{OUT}}$  pin quickly returns to the  $V_{\text{SS}}$  level.

The CE pull-down function keeps the IC to be in stand-by mode even if the CE pin is left open.

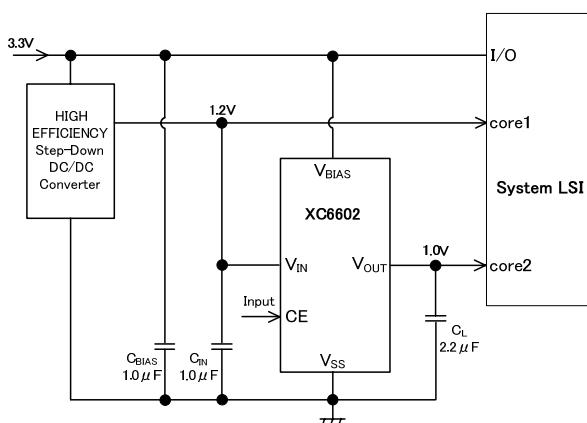

### ■ APPLICATIONS

- Smart phones / Mobile phones
- Digital still cameras / Camcorders
- Note PC / Tablet PC
- E-book Readers / Electronic dictionaries
- Wireless LAN

### ■ FEATURES

Maximum Output Current	: 1A (1.3A Limit)
ON Resistance	: $0.15\Omega @ V_{\text{BIAS}}=3.6\text{V}, V_{\text{OUT}}=1.2\text{V}$
Bias Voltage Range	: 2.5V~6.0V
Input Voltage Range	: 0.5V~3.0V
Output Voltage Range	: 0.5V~1.8V (0.1V increments)
Output Voltage Accuracy	: $\pm 0.015\text{V} @ V_{\text{OUT}} < 1.2\text{V}$ $\pm 0.020\text{V} @ V_{\text{OUT}} \geq 1.2\text{V}$
Ripple Rejection	: 60dB @ $f=1\text{kHz}$ ( $V_{\text{BIAS\_PSRR}}$ ) 75dB @ $f=1\text{kHz}$ ( $V_{\text{IN\_PSRR}}$ )
Low Power Consumption	: $100\mu\text{A}$ ( $V_{\text{BIAS}}$ ), $6.5\mu\text{A}$ ( $V_{\text{IN}}$ ) @ $V_{\text{OUT}}=1.2\text{V}$
Stand-by Current	: $0.01\mu\text{A}$ ( $V_{\text{BIAS}}$ ), $0.01\mu\text{A}$ ( $V_{\text{IN}}$ )
Under-voltage Lockout	: 1.8V ( $V_{\text{BIAS}}$ ), 0.4V ( $V_{\text{IN}}$ )
Thermal Shutdown	: $150^\circ\text{C}$ @ detect, $125^\circ\text{C}$ @ release
Protection Circuit	: Fold-back Current Limit, TSD, UVLO
Function	: Built-in Soft-start CE Pull-Down (Active High) $C_L$ Auto Discharge
Operating Ambient Temperature	: $-40^\circ\text{C} \sim +85^\circ\text{C}$
Output Capacitor	: Ceramic Capacitor Compatible ( $2.2\mu\text{F}$ )
Packages	: USP-6C, SOT-26W, SOT-89-5, WLP-5-02
Environmentally Friendly	: EU RoHS Compliant, Pb Free

### ■ TYPICAL APPLICATION CIRCUIT

### ■ TYPICAL PERFORMANCE CHARACTERISTICS

#### ● Dropout Voltage vs. Output Current

## PIN CONFIGURATION

\*The dissipation pad for the USP-6C package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the V<sub>SS</sub> (No. 2) pin.

## PIN ASSIGNMENT

PIN NUMBER				PIN NAME	FUNCTIONS
USP-6C	SOT-26W	SOT-89-5	WLP-5-02		
1	6	3	3	V <sub>BIAS</sub>	Power Supply Input
2	5	2	5	V <sub>SS</sub>	Ground
3	4	4	4	V <sub>IN</sub>	Driver Transistor Input
4	3	5	1	V <sub>OUT</sub>	Output
5	2	-	-	NC	No Connection
6	1	1	2	CE	ON/OFF Control

## FUNCTION CHART

XC6602 Series, Type A/B

PIN NAME	SIGNAL	STATUS
CE	L	Stand-by
	H	Active
	OPEN	Stand-by

## PRODUCT CLASSIFICATION

### Ordering Information

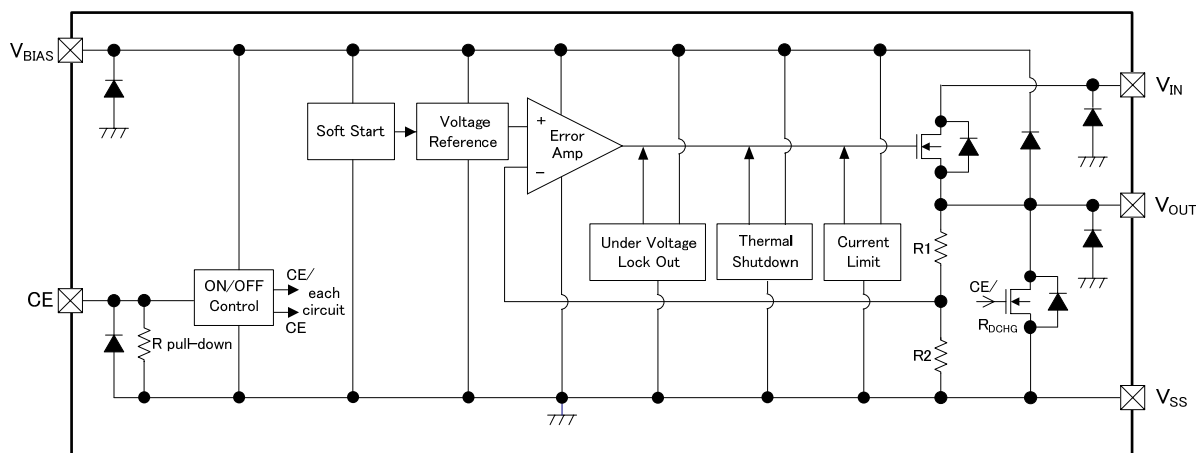

XC6602①②③④⑤⑥-⑦<sup>(\*)</sup> With soft-start circuit built-in, can be selected from with or without functions

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	Type	A	Soft-start included
		B	Soft-start excluded
②③	Output Voltage	05~18	e.g. 1.2V → ②=1, ③=2
④	Output Voltage Accuracy	1	±0.015V (V <sub>OUT</sub> < 1.2V), ±0.020V (V <sub>OUT</sub> ≥ 1.2V)
⑤⑥-⑦ <sup>(*)</sup>	Packages (Order Unit)	ER-G	USP-6C (3,000/Reel)
		MR-G	SOT-26W (3,000/Reel)
		PR-G	SOT-89-5 (1,000/Reel)
		0R-G	WLP-5-02 (3,000/Reel)

<sup>(\*)</sup> The "-G" suffix denotes Halogen and Antimony free as well as being fully EU RoHS compliant.

## ■ BLOCK DIAGRAMS

• Type A

• Type B

\* Diodes inside the circuits are ESD protection diodes and parasitic diodes.

Soft-Start Time (Type A) <sup>(10)</sup>	t <sub>SS</sub>	V <sub>CE</sub> =0V → 3.6V, tr=5 μs	225	430	600	μs	⑤	
Output Rise Time (Type B) <sup>(10)</sup>	t <sub>ON</sub>	V <sub>CE</sub> =0V → 3.6V, tr=5 μs	-	-	110	μs	⑤	
Inrush Current (Type A)	I <sub>RUSH</sub>	C <sub>L</sub> =2.2 μF	V <sub>OUT(T)</sub> ≤ 1.2V	-	-	70	mA	⑤
			V <sub>OUT(T)</sub> > 1.2V	-	-	85	mA	⑤
		C <sub>L</sub> =10 μF	V <sub>OUT(T)</sub> ≤ 1.2V	-	-	155	mA	⑤
			V <sub>OUT(T)</sub> > 1.2V	-	-	215	mA	⑤

\* 1: Unless otherwise stated, V<sub>BIAS</sub>=V<sub>CE</sub>=3.6V, V<sub>IN</sub>=V<sub>OUT(T)</sub>+0.3V, I<sub>OUT</sub>=1mA, C<sub>BIAS</sub>=C<sub>IN</sub>=1.0 μF, C<sub>L</sub>=2.2 μF

\* 2: V<sub>OUT(E)</sub> = Effective output voltage

\* 3: V<sub>OUT(T)</sub> = Nominal output voltage

\* 4: Mount conditions affect heat dissipation. Maximum output current is not guaranteed when TSD starts to operate earlier.

\* 5: V<sub>dif</sub> = {V<sub>IN1</sub><sup>(6)</sup> - V<sub>OUT1</sub><sup>(7)</sup>}.

\* 6: V<sub>IN1</sub> is an input voltage when V<sub>OUT1</sub> appears at the output during decreasing input voltage gradually.

\* 7: V<sub>OUT1</sub> is a voltage equal to 98% of the output voltage where V<sub>BIAS</sub>=V<sub>CE</sub>=3.6 and V<sub>IN</sub>=V<sub>OUT(T)</sub>+0.3V at I<sub>OUT</sub>=1A is input to the V<sub>IN</sub> pin.

\* 8: Please refer to the table E-1 named DROPOUT VOLTAGE CHART

\* 9: Supply current 1 may be fluctuated because that some bias current flows into the output.

\* 10: A time between the CE input goes over the CE H threshold and the output reaches V<sub>OUT(E)</sub> × 0.9V.

\* Dropout voltage is defined as the  $V_{GS}(=V_{BIAS}-V_{OUT(E)})$  of the driver transistor.

## OPERATIONAL EXPLANATION

The voltage divided by resistors R1 and R2 is compared with the internal reference voltage by the error amplifier. The  $V_{OUT}$  pin is then driven by the subsequent output signal. The output voltage at the  $V_{OUT}$  pin is controlled and stabilized by a system of negative feedback.

$V_{BIAS}$  pin is power supply pin for output voltage control circuit, protection circuit and CE circuit. Also, the  $V_{BIAS}$  pin supplies some current as output current.  $V_{IN}$  pin is connected to a driver transistor and provides output current.

In order to obtain high efficient output current through low on-resistance, please take enough  $V_{GS} (=V_{BIAS} - V_{OUT(E)})$  of the driver transistor.

Figure1: XC6602 Series, Type A

### <Soft-Start Function>

With the XC6602 (Type A), the inrush current ( $I_{RUSH}$ ) from  $V_{IN}$  to  $V_{OUT}$  for charging  $C_L$  at start-up can be reduced and makes the  $V_{IN}$  stable.

As for the XC6602, the soft-start time in the type A is optimized internally. On the other hand, the type B of the XC6602 does not have the soft-start time function.

### <Current Limiter, Short-Circuit Protection>

The XC6602 series includes a combination of a fixed current limiter circuit and a foldback short-circuit protection. When the output current reaches the current limit, the output voltage drops and this operation makes the output current foldback to be decreased.

### <Thermal Shutdown Circuit (TSD) >

When the junction temperature of the built-in driver transistor reaches the temperature limit, the thermal shutdown circuit operates and the driver transistor will be set to OFF. The IC resumes its operation when the thermal shutdown function is released and the IC's operation is automatically restored because the junction temperature drops to the level of the thermal shutdown release temperature.

### <Under Voltage Lock Out (UVLO) >

When the  $V_{BIAS}$  pin and  $V_{IN}$  pin voltage drops, the output driver transistor is set to OFF by UVLO function to prevent false output caused by unstable operation of the internal circuitry. When the  $V_{BIAS}$  pin voltage and the  $V_{IN}$  pin voltage rises at release voltage, the UVLO function is released. The driver transistor is turned ON and start to operate voltage regulation.

## ■ OPERATIONAL EXPLANATION (Continued)

### <CE Pin>

The XC6602 internal circuitry can be shutdown via the signal to the CE pin. In shutdown mode with CE low level voltage, the  $V_{OUT}$  pin will be pulled down to the  $V_{SS}$  level via  $C_L$  discharge resistance ( $R_{DCHG}$ ) placed in parallel to R1 and R2.

The CE pin has pull-down circuitry so that CE input current flows during IC operation. If the CE pin voltage is taken from  $V_{BIAS}$  pin or  $V_{SS}$  pin then logic is fixed and the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry when medium voltage is input.

### <CL High Speed Auto-Discharge>

XC6602 series can quickly discharge the electric charge at the output capacitor ( $C_L$ ) via the internal transistor located between the  $V_{OUT}$  pin and the  $V_{SS}$  pin when a low signal to the CE pin which enables a whole IC circuit put into OFF state. When the IC is disabled, electric charge at the output capacitor ( $C_L$ ) is quickly discharged so that it could avoid malfunction. Discharge time of the output capacitor ( $C_L$ ) is set by the  $C_L$  auto-discharge resistance ( $R_{DCHG}$ ) and the output capacitor ( $C_L$ ). By setting time constant of a  $C_L$  auto-discharge resistance value ( $R_{DCHG}$ ) and an output capacitor value ( $C_L$ ) as  $\tau$  ( $\tau = C_L \times R_{DCHG}$ ), the output voltage after discharge via the internal transistor is calculated by the following formula. Please also note  $R_{DCHG}$  is depended on  $V_{BIAS}$ . When  $V_{BIAS}$  is larger,  $R_{DCHG}$  is smaller.

$$V = V_{OUT(E)} \times e^{-t/\tau} \text{ or } t = \tau \ln(V_{OUT(E)} / V)$$

(V: Output voltage after discharge,  $V_{OUT(E)}$ : Initial Output voltage, t: Discharge time,  
 $\tau$ :  $C_L$  auto-discharge resistance  $R_{DCHG} \times C_L$  Output capacitance)

### <Low ESR Capacitor>

With the XC6602 series, a stable output voltage is achievable even if used with low ESR capacitors, as a phase compensation circuit is built-in. The output capacitor ( $C_L$ ) should be connected as close to  $V_{OUT}$  pin and  $V_{SS}$  pin to obtain stable phase compensation. Values required for the phase compensation are as the table below.

For a stable power input, please connect an bias capacitor ( $C_{BIAS}$ ) between the  $V_{BIAS}$  pin and the  $V_{SS}$  pin. Also, please connect an input capacitor ( $C_{IN}$ ) between the  $V_{IN}$  pin and the  $V_{SS}$  pin. In order to ensure the stable phase compensation while avoiding run-out of values, please use the capacitor ( $C_{BIAS}$ ,  $C_{IN}$ ,  $C_L$ ) which does not depend on bias or temperature too much. The table below shows recommended values of  $C_{BIAS}$ ,  $C_{IN}$ ,  $C_L$ .

CHART 1 : Recommended Values of  $C_{BIAS}$ ,  $C_{IN}$ ,  $C_L$  (MIN.)

OUTPUT VOLTAGE RANGE $V_{OUT(T)}$	BIAS CAPACITOR $C_{BIAS}$	INPUT CAPACITOR $C_{IN}$	OUTPUT CAPACITOR $C_L$
0.5V~1.8V	1.0 $\mu$ F	1.0 $\mu$ F	2.2 $\mu$ F

## ■ NOTES ON USE

1. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please keep the resistance low for the  $V_{BIAS}$ ,  $V_{IN}$  and  $V_{SS}$  wiring in particular.
3. Please wire the  $C_{BIAS}$ ,  $C_{IN}$  and  $C_L$  as close to the IC as possible.
4. Capacitances of these capacitors ( $C_{BIAS}$ ,  $C_{IN}$ ,  $C_L$ ) are decreased by the influences of bias voltage and ambient temperature. Care shall be taken for capacitor selection to ensure stability of phase compensation from the point of ESR influence.
5. When it is used in a quite small input / output dropout voltage, output may go into unstable operation. Please test it thoroughly before using it in production.
6. Torex places an importance on improving our products and their reliability.  
We request that users incorporate fail-safe designs and post-aging protection treatment when using Torex products in their systems
7. Note on mounting (WLP-5-02)
  - (1) Mount pad design should be optimized for user's conditions.
  - (2) Sn-AG-Cu is used for the package terminals. If eutectic solder is used, mounting reliability is decreased. Please do not use eutectic solder paste.
  - (3) When underfill agent is used to increase interfacial bonding strength, please take enough evaluation for selection. Some underfill materials and applied conditions may decrease bonding reliability.
  - (4) The IC has exposed surface of silicon material in the top marking face and sides so that it is weak against mechanical damages. Please take care of handling to avoid cracks and breaks.
  - (5) The IC has exposed surface of silicon material in the top marking face and sides. Please use the IC with keeping the circuit open (avoiding short-circuit from the out).
  - (6) Semi-transparent resin is coated on the circuit face of the package. Please be noted that the usage under strong lights may affects device performance.

XC6602x051xR-G

XC6602x121MR-G

XC6602x121xR-G

XC6602x181MR-G

XC6602x181xR-G

\* Mount conditions affect heat dissipation. Thermal shutdown may start to operate before reaching the current limit.

## TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

\* Unless otherwise stated,  $V_{BIAS}=V_{CE}=3.6V$ ,  $V_{IN}=V_{OUT(T)}+0.3V$ ,  $I_{OUT}=1mA$ ,  $C_{BIAS}=C_{IN}=1.0\mu F$ ,  $C_L=2.2\mu F$ ,  $T_a=25^\circ C$

(3) Output Voltage vs. Input Voltage

(4) Dropout Voltage vs. Output Current

XC6602x051xR-G

XC6602x121MR-G

XC6602x121xR-G

XC6602xxx1MR-G

$I_{OUT}=1A$

XC6602x181xR-G

(\*1)  $V_{GS}$  is a Gate-Source voltage of the driver transistor that is defined as the value of  $V_{BIAS} - V_{OUT(E)}$ .

A value of the dropout voltage is determined by the value of the  $V_{GS}$ .

## ■ TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

\* Unless otherwise stated,  $V_{BIAS}=V_{CE}=3.6V$ ,  $V_{IN}=V_{OUT(T)}+0.3V$ ,  $I_{OUT}=1mA$ ,  $C_{BIAS}=C_{IN}=1.0\mu F$ ,  $C_L=2.2\mu F$ ,  $T_a=25^\circ C$

(5) Supply Bias Current vs. Bias Voltage

(6) Supply Input Current vs. Input Voltage

## TYPICAL PERFORMANCE CHARACTERISTICS (Continued)

### ● USP-6C Power Dissipation

Power dissipation data for the USP-6C is shown in this page.  
The value of power dissipation varies with the mount board conditions.  
Please use this data as the reference data taken in the following condition.

#### 1. Measurement Condition

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm<sup>2</sup> in one side)  
Copper (Cu) traces occupy 50% of the board area  
In top and back faces  
Package heat-sink is tied to the copper traces

- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 4 x 0.8 Diameter

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient temperature

Board Mount ( $T_j \text{ max} = 125^\circ\text{C}$ )

Ambient Temperature ( $^\circ\text{C}$ )	Power Dissipation Pd (mW)	Thermal Resistance ( $^\circ\text{C}/\text{W}$ )
25	1000	100.00
85	400	

## PACKAGING INFORMATION (Continued)

### SOT-26W Power Dissipation

Power dissipation data for the SOT-26W is shown in this page.  
 The value of power dissipation varies with the mount board conditions.  
 Please use this data as the reference data taken in the following condition.

#### 1. Measurement Condition

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm<sup>2</sup> in one side)  
 Copper (Cu) traces occupy 50% of the board area  
 In top and back faces  
 Package heat-sink is tied to the copper traces  
 (Board of SOT-26 is used.)
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 4 x 0.8 Diameter

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient temperature

Board Mount ( $T_j \text{ max} = 125^\circ\text{C}$ )

Ambient Temperature ( $^\circ\text{C}$ )	Power Dissipation Pd (mW)	Thermal Resistance ( $^\circ\text{C}/\text{W}$ )
25	600	166.67
85	240	

## ■ PACKAGING INFORMATION (Continued)

### ● SOT-89-5 Power Dissipation

Power dissipation data for the SOT-89-5 is shown in this page.  
The value of power dissipation varies with the mount board conditions.  
Please use this data as the reference data taken in the following condition.

#### 1. Measurement Condition

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm<sup>2</sup> in one side)  
Copper (Cu) traces occupy 50% of the board area  
In top and back faces  
Package heat-sink is tied to the copper traces
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 5 x 0.8 Diameter

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient temperature

Board Mount ( $T_j \text{ max} = 125^\circ\text{C}$ )

Ambient Temperature ( $^\circ\text{C}$ )	Power Dissipation Pd (mW)	Thermal Resistance ( $^\circ\text{C}/\text{W}$ )
25	1300	76.92
85	520	

## PACKAGING INFORMATION (Continued)

- WLP-5-02 Power Dissipation

Power dissipation data for the WLP-5-02 is shown in this page.  
 The value of power dissipation varies with the mount board conditions.  
 Please use this data as one of reference data taken in the described condition.

### 1. Measurement Conditions

- Condition : Mount on a board
- Ambient : Natural convection
- Soldering : Lead (Pb) free
- Board Dimensions : 40mm×40mm (1600mm<sup>2</sup> in one side)
- Metal Area : 1st Metal Layer about 50%  
 2nd Inner Metal Layer about 50%  
 3rd Inner Metal Layer about 50%  
 4th Metal Layer about 50%  
 4 separations is each layer connected to each pin
- Material : Glass Epoxy (FR-4)
- Thickness : 1.6mm
- Through-hole : 4 x 0.8 Diameter

### 2. Power Dissipation vs. Ambient temperature

Board Mount ( Tjmax=125°C)

Ambient Temperature (°C)	Power Dissipation Pd (mW)	Thermal Resistance (°C/W)
25	750	133.33
85	300	

## ■ MARKING RULE

① represents product series

MARK	PRODUCT SERIES
P	XC6602A****-G
R	XC6602B****-G

② represents voltage range

MARK	OUTPUT VOLTAGE (V)	MARK	OUTPUT VOLTAGE (V)
A	0.5	N	1.5
B	0.6	P	1.6
C	0.7	R	1.7
D	0.8	S	1.8
E	0.9	T	-
F	1.0	U	-
H	1.1	V	-
K	1.2	X	-
L	1.3	Y	-
M	1.4	Z	-

③④ represents production lot number  
 01 to 09, 0A to 0Z, 11 to 9Z, A1 to A9, AA to Z9, B1 to ZZ in order.  
 (G, I, J, O, Q, W excluded)  
 \*No character inversion used.
