

2-Bit Bidirectional Voltage-Level Translator for Open-Drain and Push-Pull Application

UM3202Q DFN8 1.70×1.35

UM3202H CSP8 1.9×0.9

UM3202V VSSOP8

General Description

The UM3202Q/3202H/3202V is ± 8 kV dual channel ESD-protected level translator provide the level shifting necessary to allow data transfer in a multi-voltage system. Externally applied voltages, V_{CCB} and V_{CCA} , set the logic levels on either side of the device. A low-voltage logic signal present on the V_{CCA} side of the device appears as a high-voltage logic signal on the V_{CCB} side of the device, and vice-versa. The UM3202Q/3202H/3202V bidirectional level translator utilizes a transmission-gate based design to allow data translation in either direction ($V_{CCA} \leftrightarrow V_{CCB}$) on any single data line. The UM3202Q/3202H/3202V accepts V_{CCA} from +1.65V to +3.6V and V_{CCB} from +2.3V to +5.5V, making it ideal for data transfer between low-voltage ASICs / PLDs and higher voltage systems.

The UM3202Q/3202H/3202V enters a three-state output mode to reduce supply current when output enable (OE) is low. The UM3202Q/3202H/3202V is designed so that the OE input circuit is supplied by V_{CCA} . ± 8 kV ESD protection on the V_{CCB} side for greater protection in applications that route signals externally.

The UM3202Q/3202H/3202V is a dual level translator available in DFN8 1.70×1.35, CSP8 1.9×0.9 and VSSOP8 packages.

Applications

- SPI, MICROWIRE, and I²C Level Translation
- Low-Voltage ASIC Level Translation
- Smart Card Readers
- Cell-Phone Cradles
- Portable POS Systems
- Portable Communication Devices
- Low-Cost Serial Interfaces
- Cell-Phones
- GPS
- Telecommunications Equipment

Features

- Max Data Rates:
24Mbps (Push Pull),
2Mbps (Open Drain)
- Bidirectional Level Translation
- 1.65V to 3.6V on A Port and 2.3V to 5.5V on B Port ($V_{CCA} \leq V_{CCB}$)
- ± 8 kV ESD Protection on B Port
- No Power-Supply Sequencing Required
 V_{CCA} or V_{CCB} can be Ramped First
- DFN8, CSP8 and VSSOP8 Packages

Pin Description

| Pin Name | Function |
|------------------|---|
| V _{CCA} | A-Port Supply Voltage. $1.65V \leq V_{CCA} \leq 3.6V$ and $V_{CCA} \leq V_{CCB}$ |
| A1 | Input/Output 1. Referenced to V _{CCA} |
| A2 | Input/Output 2. Referenced to V _{CCA} |
| GND | Ground |
| OE | 3-State Output Enable. Pull OE low to place all outputs in 3-state mode. Referenced to V _{CCA} |
| B2 | Input/Output 2. Referenced to V _{CCB} |
| B1 | Input/Output 1. Referenced to V _{CCB} |
| V _{CCB} | B-Port Supply Voltage. $2.3V \leq V_{CCB} \leq 5.5V$ |

Ordering Information

| Part Number | Packaging Type | Marking Code | Shipping Qty |
|-------------|----------------|--------------|-------------------------------|
| UM3202Q | DFN8 1.70×1.35 | AH | 3000pcs/7 Inch Tape & Reel |
| UM3202H | CSP8 1.9×0.9 | EBA | |
| UM3202V | VSSOP8 | VA | |

Absolute Maximum Ratings (Note 1)

Over operating free-air temperature range (unless otherwise noted)

| Symbol | Parameter | | Value | Unit |
|-----------|--|-----------|---------------------------|--------------------|
| V_{CCA} | Supply Voltage Range | | -0.5 to +4.5 | V |
| V_{CCB} | Supply Voltage Range | | -0.5 to +6.5 | V |
| V_I | Input Voltage Range | A Ports | -0.5 to +4.5 | V |
| | | B Ports | -0.5 to +6.5 | |
| V_O | Voltage Range Applied to Any Output in the High-Impedance or Power-Off State | A Ports | -0.5 to +4.5 | V |
| | | B Ports | -0.5 to +6.5 | |
| V_O | Voltage Range Applied to Any Output in the High or Low State (Note 2) | A Ports | -0.5 to ($V_{CCA}+0.5$) | V |
| | | B Ports | -0.5 to ($V_{CCB}+0.5$) | |
| I_{IK} | Input Clamp Current | $V_I < 0$ | -50 | mA |
| I_{OK} | Output Clamp Current | $V_O < 0$ | -50 | mA |
| I_O | Continuous Output Current | | ± 50 | mA |
| | Continuous Current through V_{CCA} , V_{CCB} , or GND | | ± 100 | |
| T_{OP} | Operating Temperature Range | | -40 to +85 | $^{\circ}\text{C}$ |
| T_{STG} | Storage Temperature Range | | -65 to +150 | $^{\circ}\text{C}$ |

Note 1. Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Note 2. The value of V_{CCA} and V_{CCB} are provided in the recommended operating conditions table.

Thermal Information

| Symbol | Parameter | UM3202Q | UM3202H | UM3202V | Unit |
|---------------|--|---------|---------|---------|-----------------------------|
| θ_{JA} | Junction-to-ambient thermal resistance | 162 | 105 | 199.3 | $^{\circ}\text{C}/\text{W}$ |
| θ_{jc} | Junction-to-case thermal resistance | 104 | 71 | 76.2 | $^{\circ}\text{C}/\text{W}$ |

Recommended Operating Conditions (Note 1, 2)

| Symbol | Parameter | | V _{CCA} | V _{CCB} | Min | Max | Unit |
|------------------|------------------------------------|--------------------------|------------------|------------------|-----------------------|------------------------|------|
| V _{CCA} | Supply Voltage | | | | 1.65 | 3.6 | V |
| V _{CCB} | | | | | 2.3 | 5.5 | |
| V _{IH} | High Level Input Voltage | A-Port | 1.65V to 1.95V | 2.3V to 5.5V | V _{CCI} -0.2 | V _{CCI} | V |
| | | | 2.3V to 3.6V | | V _{CCI} -0.4 | V _{CCI} | |
| | | B-Port | 1.65V to 3.6V | 2.3V to 5.5V | V _{CCI} -0.4 | V _{CCI} | |
| OE | V _{CCA} ×0.65 | 5.5 | | | | | |
| V _{IL} | Low Level Input Voltage | A-Port | 1.65V to 3.6V | 2.3V to 5.5V | 0 | 0.15 | V |
| | | B-Port | | | 0 | 0.15 | |
| | | OE | | | 0 | V _{CCA} ×0.35 | |
| Δt/ΔV | Input Transition Rise or Fall Time | A-Port Push-Pull Driving | 1.65V to 3.6V | 2.3V to 5.5V | 10 | | ns/V |
| | | B-Port Push-Pull Driving | | | 10 | | |
| | | Control Input | | | 10 | | |

Note 1. V_{CCI} is the supply voltage associated with the input port.

Note 2. V_{CCA} must be less than or equal to V_{CCB} and must not exceed 3.6 V.

Electrical Characteristics (Note 1, 2, 3)

Over recommended operating free-air temperature range (unless otherwise noted)

| Parameter | Test Conditions | V _{CCA} | V _{CCB} | T _A =25°C | | -40°C to 85°C | | Unit |

Applications Information

The UM3202Q/3202H/3202V can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The UM3202Q/3202H/3202V is ideal for use in application where an open-drain driver is connected to the data I/Os. The UM3202Q/3202H/3202V can also be used in applications where a push-pull driver is connected to the data I/Os, but the UM3302 might be a better option for such push-pull applications.

Block Diagram

The UM3202Q/3202H/3202V (block diagram see Figure 1) does not require a direction-control signal to control the direction of data flow from A to B or from B to A. Each A-port I/O has an internal 10kΩ pull-up resistor to V_{CCA} , and each B-port I/O has an internal 10kΩ pull-up resistor to V_{CCB} . During a rising edge, the one-shot turns on the PMOS transistors (PU1, PU2) for a short duration, that speeds up the low-to-high transition.

Figure 1 Block Diagram of UM3202Q/3202H/3202V I/O Cell

Input Driver Requirements

The fall time (t_{fA} , t_{fB}) of a signal depends on the output impedance of the external device driving the data I/Os of the UM3202Q/3202H/3202V. Similarly, the t_{PHL} and the maximum data rates also depend on the output impedance of the external driver. The values for t_{fA} , t_{fB} , t_{PHL} , and the maximum data rates in the data sheet assume that the output impedance of the external driver is less than 50Ω.

Power Up

During operation, ensure that $V_{CCA} \leq V_{CCB}$ at all times. During power-up sequencing, $V_{CCA} \geq V_{CCB}$ does not damage the device, so any power supply can be ramped up first.

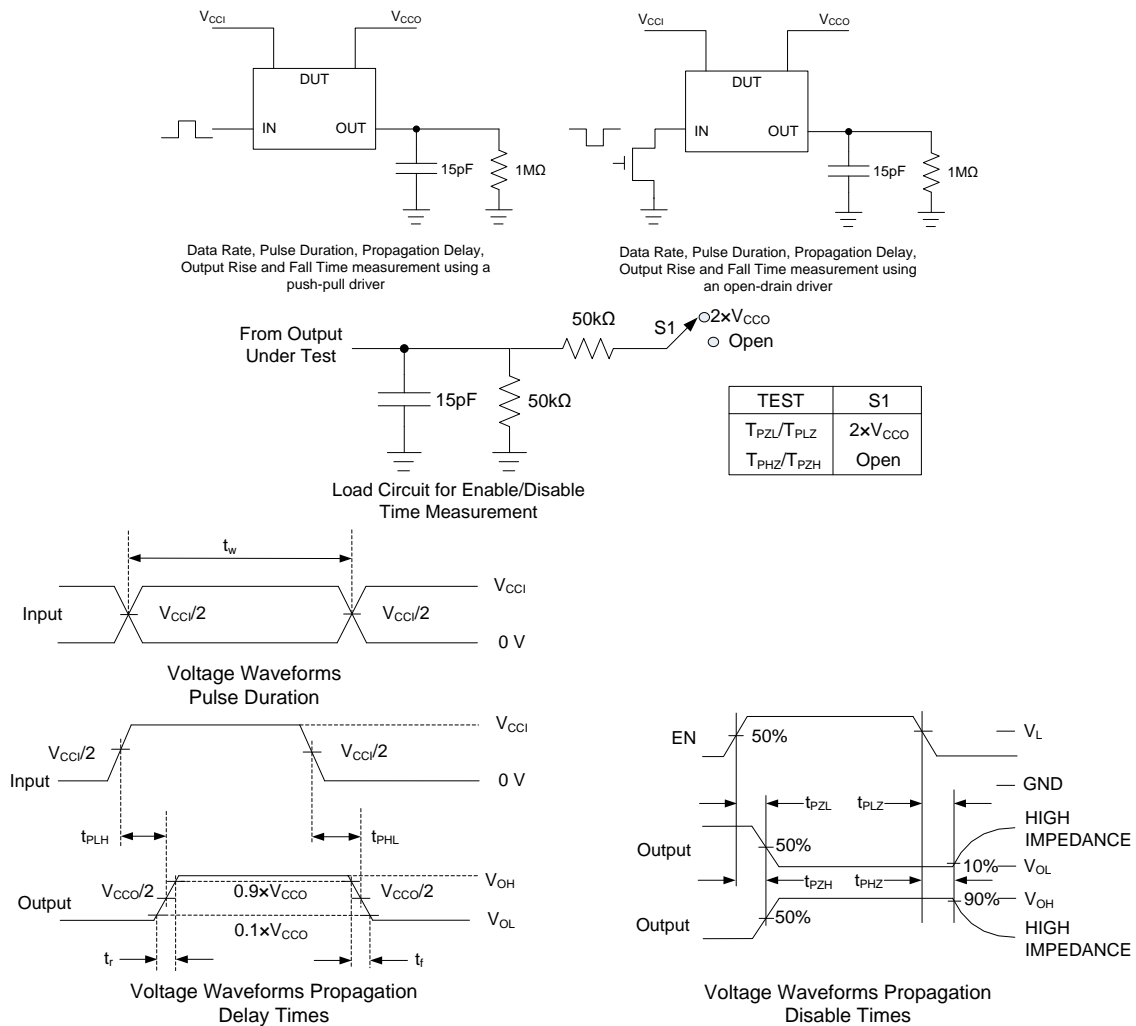

Enable and Disable

The UM3202Q/3202H/3202V has an OE input that is used to disable the device by setting OE=low, which places all I/Os in the high-impedance (Hi-Z) state. The disable time (t_{dis}) indicates the delay between the time when OE goes low and when the outputs actually get disabled (Hi-Z). The enable time (t_{en}) indicates the amount of time the user must allow for the one-shot circuitry to become operational after OE is taken high.

Pull-up or Pull-down Resistors on I/O Lines

Each A-port I/O has an internal 10kΩ pull-up resistor to V_{CCA} , and each B-port I/O has an internal 10kΩ pull-up resistor to V_{CCB} . If a smaller value of pull-up resistor is required, an external resistor must be added from the I/O to V_{CCA} or V_{CCB} (in parallel with the internal 10kΩ resistor).

Test Circuits

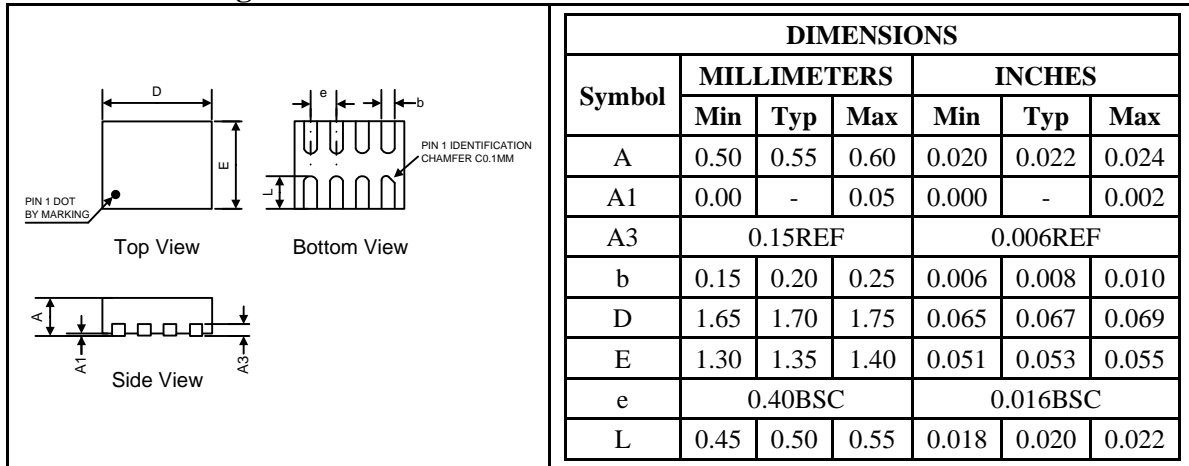

- A. C_L includes probe and jig capacitances.
- B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control.
- Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: $PRR \leq 100\text{MHz}$, $Z_o = 50\Omega$, $dV/dt \geq 1\text{V/ns}$.
- D. The outputs are measured one at a time, with one transition per measurement.
- E. T_{PLZ} and T_{PHZ} are the same as t_{dis} .
- F. T_{PZL} and T_{PZH} are the same as t_{en} .
- G. T_{PLH} and T_{PHL} are the same as t_{pd} .
- H. V_{CCI} is the V_{CC} associated with the input port.
- I. V_{CCO} is the V_{CC} associated with the output port.
- J. All parameters and waveforms are not applicable to all devices.

GREEN COMPLIANCE

Union Semiconductor is committed to environmental excellence in all aspects of its operations including meeting or exceeding regulatory requirements with respect to the use of hazardous substances. Numerous successful programs have been implemented to reduce the use of hazardous substances and/or emissions.

All Union components are compliant with the RoHS directive, which helps to support customers in their compliance with environmental directives. For more green compliance information, please visit:
