

8-Bit Dual-Supply Bus Transceiver With Configurable Voltage Translation and 3-State Outputs

UM3608AO SSOP24

UM3608UO TSSOP24

UM3608QA QFN24 3.5×5.5

General Description

UM3608 are octal bus transceivers that utilize deep micron CMOS Technology are intended for bus oriented application. This 8-bit non-inverting bus transceiver uses two separate configurable power-supply rails to implement universal low voltage bidirectional translation between any of the 1.8V, 2.5V, 3.3V and 5.5V voltage nodes. The UM3608 is optimized to operate with V_{CCA} and V_{CCB} set at 1.65V to 5.5V. The A port is designed to track V_{CCA} . V_{CCA} accepts any supply voltage from 1.65V to 5.5V. The B port is designed to track V_{CCB} . V_{CCB} accepts any supply voltage from 1.65V to 5.5 V.

The UM3608 is designed for asynchronous communication between two data buses. The logic levels of the direction-control (DIR) input and the output-enable (OE) input activate either the B-port outputs or the A-port outputs or place both output ports into the high-impedance mode. The device transmits data from the A bus to the B bus when the B-port outputs are activated, and from the B bus to the A bus when the A-port outputs are activated. The input circuitry on both A and B ports must have a logic HIGH or LOW level applied to prevent excess I_{CC} and I_{CCZ} .

UM3608 is fully specified for partial power down applications using I_{off} . The I_{off} circuitry disables the outputs, preventing damaging the current back flow through the device when it is powered down. The V_{CC} isolation feature ensures that if either V_{CC} Input is at GND, all outputs are in the high impedance state. To ensure the high impedance state during power up or power down. OE should be tied to V_{CC} through a pull up resistor. The UM3608 is designed so that the control pins (DIR and OE) are supplied by V_{CCA} .

The UM3608 series are available in SSOP24, TSSOP24 and QFN24 3.5×5.5 packages.

Applications

- Personal Electronic
- Industrial
- Enterprise
- Telecom

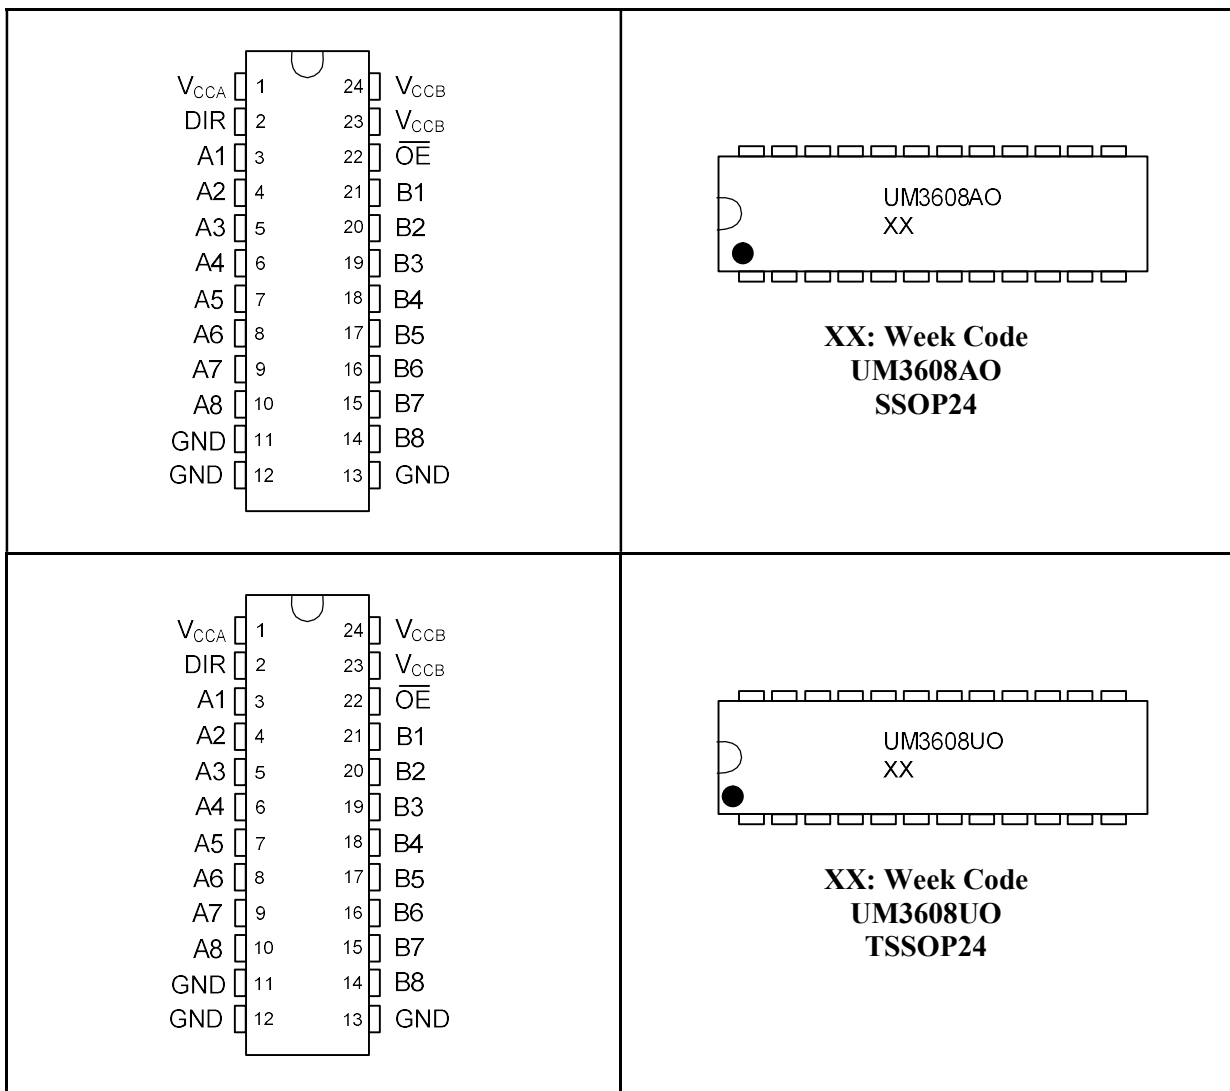

Features

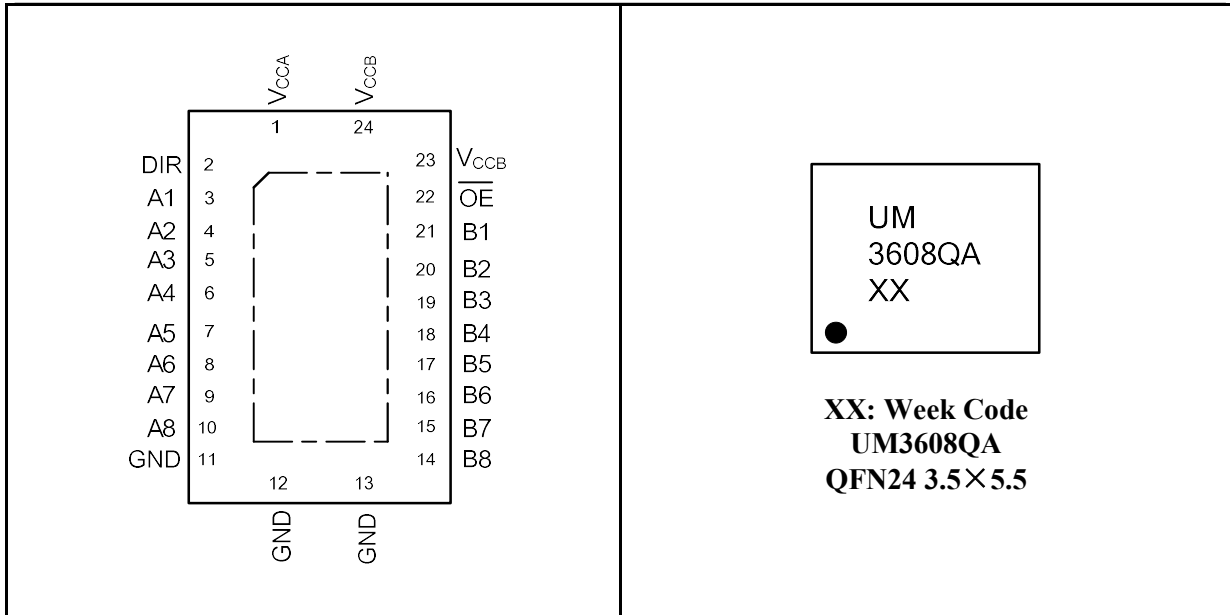

- Control Inputs V_{IH}/V_{IL} Levels Are Referenced to V_{CCA} Voltage
- V_{CC} Isolation Feature – If Either V_{CC} Input Is at GND, All Are in the High-Impedance State
- Fully Configurable Dual-Rail Design Allows Each Port to Operate Over the Full 1.65V to 5.5V Power-Supply Range
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD22
4000V Human-Body Model (A114-A)
100V Machine Model (A115-A)
1000V Charged-Device Model (C101)
- Available in SSOP24, TSSOP24 and QFN24 3.5×5.5 Packages
- Maximum Data Rates
150 Mbps ($V_{CCA} < 3.3$ V or $V_{CCB} < 3.3$ V)
220 Mbps ($V_{CCA} \geq 3.3$ V and $V_{CCB} \geq 3.3$ V)

Note 1: Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Note 2: The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.

Note 3: The value of V_{CCA} and V_{CCB} are provided in the recommended operating conditions table.

Detailed Description

The UM3608 is an 8-bit, dual supply non-inverting bus transceiver. Pin A and direction control pin are support by V_{CCA} and pin B is support by V_{CCB} . The A port is able to accept I/O voltages ranging from 1.65 V to 5.5 V, while the B port can accept I/O voltages from 1.65 V to 5.5 V. The high on DIR allows data transmission from A to B and a low on DIR allows data transmission from B to A.

Functional Block Diagram

Feature Description

Fully Configurable Dual-Rail Design Allows Each Port to Operate Over the Full 1.65V to 5.5V Power-Supply Range

Both V_{CCA} and V_{CCB} can be supplied at any voltage between 1.65V and 5.5V making the device suitable for translating between any of the voltage nodes (1.8V, 2.5V, 3.3V and 5V).

I_{off} Supports Partial-Power-Down Mode Operation

I_{off} prevents backflow current by disabling I/O output circuits when device is in partial-power-down mode.

Device Functional Modes

The UM3608 is bus transceiver that can operate from 1.65V to 5.5V (V_{CCA}) and 1.65V to 5.5V (V_{CCB}). The signal translation between 1.65V and 5.5V requires direction control and output enable control. When OE is low and DIR is high, data transmission is from A to B. When OE is low and DIR is low, data transmission is from B to A. When OE is high, both output ports will be high-impedance.

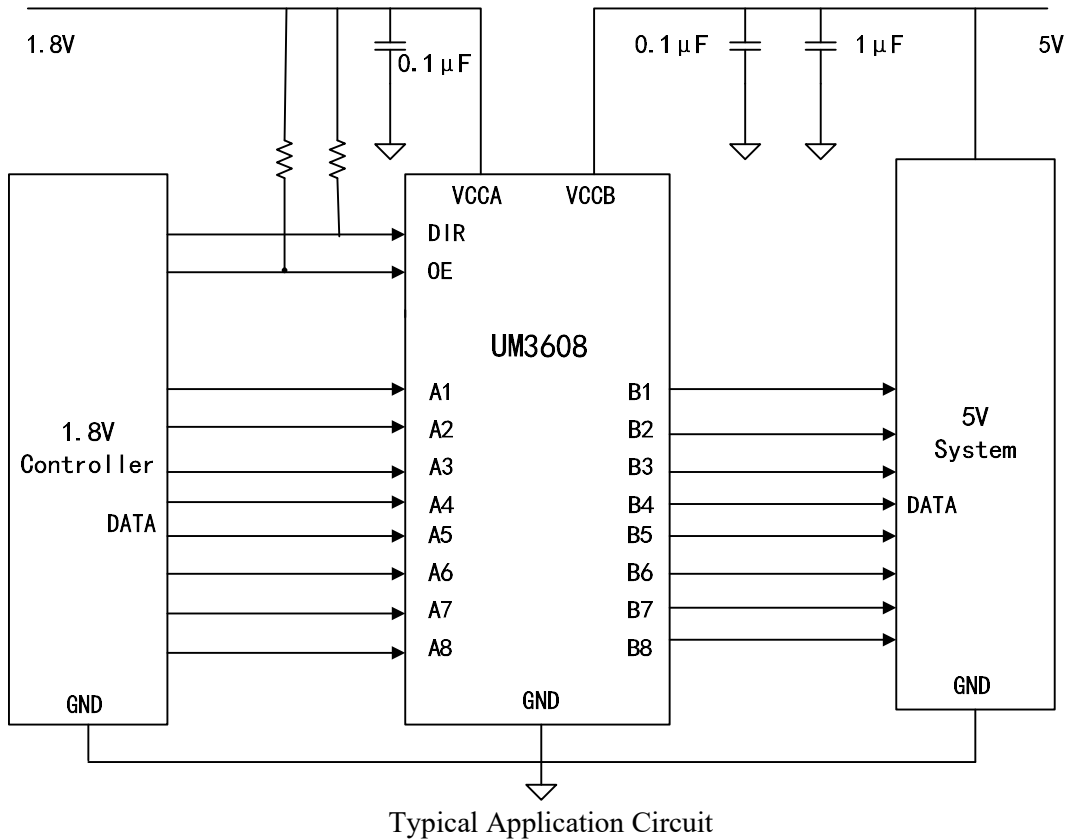

**Table 1. Function Table(1)
(Each 8-Bit Section)**

CONTROL INPUTS		OUTPUT CIRCUITS		OPERATION
OE	DIR	A PORT	B PORT	
L	L	Enabled	Hi-Z	B data to A bus
L	H	Hi-Z	Enabled	A data to B bus
H	X	Hi-Z	Hi-Z	Isolation

(1) Input circuits of the data I/Os are always active.

Application Information

The UM3608 device can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The maximum output current can be up to 32 mA when device is powered by 5 V.
