Notes: 1. Data of “TYP” is intended as an indication of the IC’s potential performance.

2. For voltage drops across the switch(ΔV_{SW})>600mV (>300mV at high temperature), excessive V_{DD} current may be drawn, i.e. the current out of the switch may contain both V_{DD} and switch input components. The reliability of the device will be unaffected unless the Maximum Ratings are exceeded.
