■ PIN DESCRIPTION

PIN NO.	PIN NAME	DESCRIPTION
1	GND	Grounding
2	I _{REF}	Pin for connecting resistor that sets constant current for internal circuits; approx. 1.3 V.
3	V _{CC}	Output pin of the internal constant-voltage circuit. Connect decoupling capacitor.
4	OFFC	Leakage input signal does not continue. Leakage is detected and SCR turn on. In these cases, this IC will be restored to the initial condition after a predetermined time. Connect capacitor that determines restore time.
5	TRC1	Pin for connecting capacitor that integrates signal output from discriminator of leak-signal input level.
6	TRC2	Pin for connecting capacitor to eliminate noise.
7	DLYC	Pin for connecting capacitor that sets delay time in case of using delay function.
8	SCRT	Output pin for driving a SCR.
9	V _{REF}	Pin for providing input reference level of leakage detection. About 2.4V appears.
10	ILKI	Other input pin of leakage detection.
11	OPAO	Output pin of operational amplifier.
12	C2	Pin for connecting capacitor that prevents abnormal oscillations. Connect capacitor across IC at pins 11 and 12.
13	OPI-	Negative input pins of operational amplifier
14	C1	Pin for connecting capacitor that prevents noise from causing malfunction. Connect capacitors across IC at pins 13 and 14 and across IC at pins 15 and 14.
15	OPI+	Positive input pins of operational amplifier
16	VS	Power supply
