## LINEAR INTEGRATED CIRCUIT

### 3A STEP-DOWN VOLTAGE SWITCHING REGULATOR

#### DESCRIPTION

As a step-down (buck) switching regulator, the UTC P2576/HV provides drives 3A load. The UTC P2576/HV are simple because it only needs to use a minimum number of external components.

Frequency compensation and a fixed-frequency oscillator are in it. UTC P2576/HV can perform with standard inductors, and simplifying the switch mode power supplies' design. UTC P2576/HV guarantees output load conditions and  $\pm 10\%$  on the oscillator frequency. Its external shutdown is included with 50 $\mu$ A standby current. As well as thermal shutdown for full protection under fault conditions, the output switch has cycle by cycle current limiting.

#### FEATURES

Notes: 1. Output pin sourcing current. No diode, inductor or capacitor connected to output.

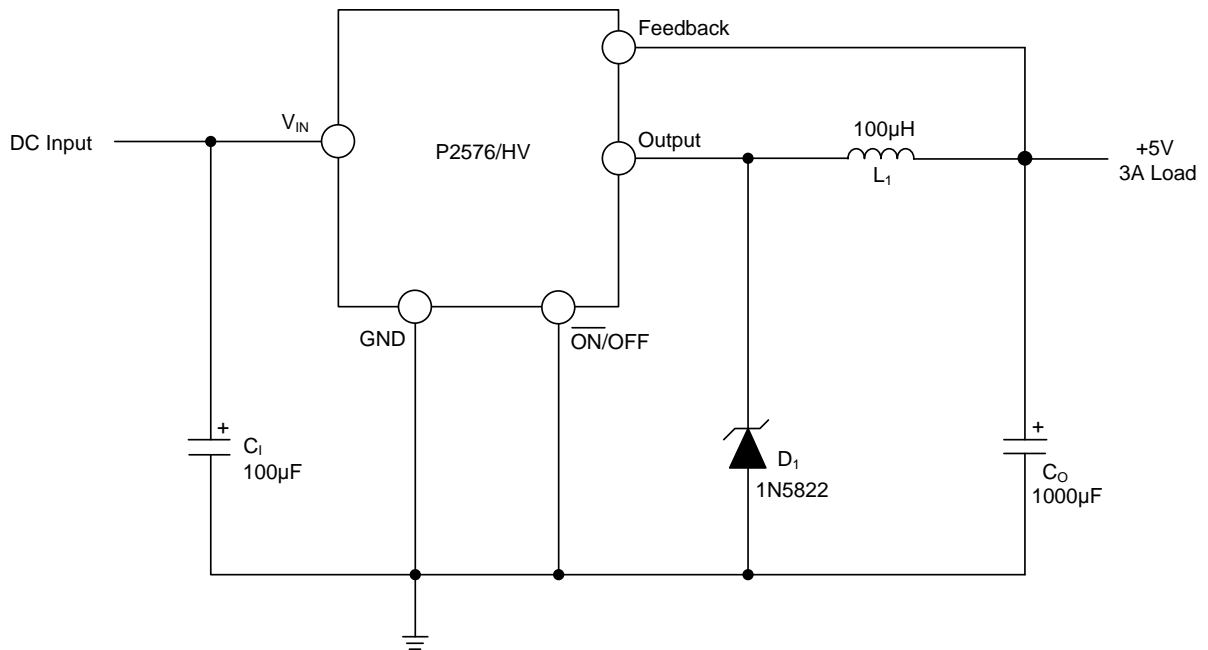

2. Feedback pin removed from output and connected to 0V.

3. Feedback pin removed from output and connected to +12V, to force the output transistor OFF.

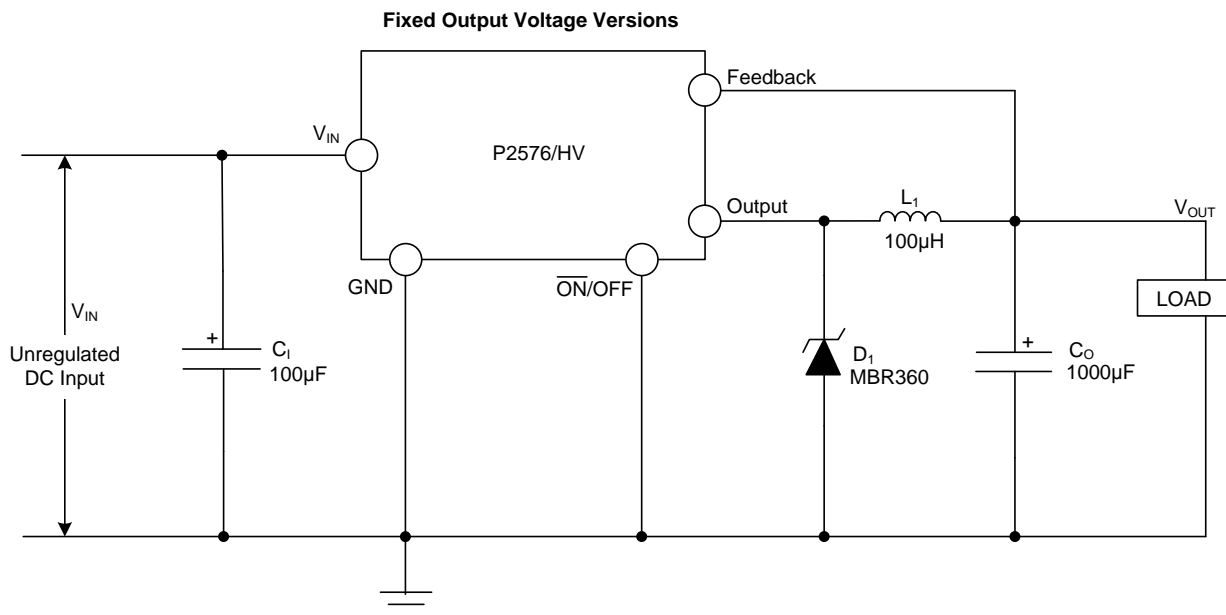

4. The oscillator frequency reduces to approximately 11 kHz in the event of an output short or an overload which causes the regulated output voltage to drop approximately 40% from the nominal output voltage.

This self-protection feature lowers the Average power dissipation of **P2576/HV** by lowering the minimum duty cycle from 5% down to approximately 2%.
