High Pulse Load Carbon Film Leaded Resistors

CBB 0207 leaded resistors with advanced pulse load capability, are the perfect choice for circuitries exposed to high levels of electromagnetic interference or electrostatic discharge. The resistors can also be used to protect the circuitry of signal and mains input lines from surge pulses. Applications are in all fields of automotive, telecommunication and industrial equipment.

METRIC SIZE			
DIN	0207		
CECC	В		

FEATURES

 Special carbon film technology for maximum heat stress capability

• Up to 6 kV or 140 W pulse load capability

• Resistance range: 10 Ω to 1.5 M Ω

- Lead (Pb)-free solder contacts
- Pure tin plating provides compatibility with lead (Pb)-free and lead containing soldering processes
- Compliant to RoHS directive 2002/95/EC

APPLICATIONS

- Automotive
- Telecommunication
- · Industrial equipment

TECHNICAL SPECIFICATIONS				
DESCRIPTION	CBB 0207			
CECC Size	E	В		
Resistance Range	10 Ω to	1.5 ΜΩ		
Resistance Tolerance	± 2	2 %		
Temperature Coefficient	Refer to Temperatu	re Coefficient graph		
Operation Mode	Long term	Standard		
Climatic Category (LCT/UCT/Days)	55/125/56	55/155/56		
Rated Dissipation, P ₇₀	0.4 W	0.6 W		
Operating Voltage, U _{max.} AC/DC	350 V			
Film Temperature	125 °C	155 °C		
Max. Resistance Change at P_{70} for Resistance Range, $\Delta R/R$ max., After:	10 Ω to 100 kΩ			
1000 h	± 1 %	± 2 %		
8000 h	+ 3 %/- 1 %	+ 5 %/- 2 %		
Permissible Voltage Against Ambient:		1		
1 Minute; <i>U</i> _{ins}	500 V			
Continuous	75 V			
Failure Rate: FIT _{observed}	≤ 0.1 x 10 ⁻⁹ /h			

Note

These resistors do not feature a limited lifetime when operated within the permissible limits. However, resistance value drift increasing over
operating time may result in exceeding a limit acceptable to the specific application, thereby establishing a functional lifetime.

DESCRIPTION

Production is strictly controlled and follows an extensive set of instructions established for reproducibility. A homogeneous and dense carbon film is deposited on a high grade ceramic body (85 % Al₂O₃) and conditioned to achieve the desired temperature coefficient. Nickel plated steel termination caps are firmly pressed on the rods. A special laser is used to achieve the target value by smoothly cutting a helical groove in the resistive layer without damaging the ceramics. Connecting wires of electrolytic copper plated with 100% pure tin are welded to the termination caps. The resistors are covered by protective coating designed for electrical, mechanical and climatic protection. The terminations receive a final pure tin on nickel plating. Five colour code rings designate the resistance value and tolerance in accordance with IEC 60062.

The result of the determined production is verified by an extensive testing procedure performed on 100 % of the individual resistors. Only accepted products are stuck directly on the adhesive tapes in accordance with IEC 60286-1.

ASSEMBLY

The resistors are suitable for processing on automatic insertion equipment and cutting and bending machines. Excellent solderability is proven, even after extended storage. They are suitable for automatic soldering using wave or dipping. The encapsulation is resistant to all cleaning solvents commonly used in the electronics industry, including alcohols, esters and aqueous solutions. The suitability of conformal coatings, if applied, shall be qualified by appropriate means to ensure the long-term stability of the whole system. The resistors are completely lead (Pb)-free, the pure tin plating provides compatibility with lead (Pb)-free and lead-containing soldering processes. The immunity of the plating against tin whisker growth has been proven under extensive testing. All products comply with GADSL (1) and the CEFIC-EECA-EICTA (2) list of legal restrictions on hazardous substances. This includes full compliance with the following directives:

- 2000/53/EC End of Vehicle Life Directive (ELV) and Annex II (ELVII)
- 2002/95/EC Restriction of the use of Hazardous Substances Directive (RoHS)
- 2002/96/EC Waste Electrical and Electrical Equipment Directive (WEEE)

APPROVALS

Where applicable, the resistors are tested in accordance with CECC 40101-806 which refers to EN 60115-1 and EN 140100.

Vishav BEYSCHLAG has achieved "Approval of Manufacturer" in accordance with IEC QC 001002-3, clause 2. The release certificate for "Technology Approval Schedule" in accordance with CECC 240001 based on IEC QC 001002-3, clause 6 is granted for the Vishay BEYSCHLAG manufacturing process.

TESTS AND REQUIREMENTS

Essentially all tests are carried out in accordance with the following specifications:

EN 60115-1, generic specification (includes tests)

EN 140100, sectional specification (includes schedule for qualification approval)

CECC 40101-806, detail specification (includes schedule for conformance inspection)

The following table contains the applicable tests selected from the documents listed above.

The tests are carried out in accordance with IEC 60068-2-xx test method and under standard atmospheric conditions in accordance with

IEC 60068-1, 5.3. Climatic category LCT/UCT/56 (rated temperature range: Lower Category Temperature, Upper Category Temperature; damp heat, long term, 56 days) is valid.

Unless otherwise specified the following values apply:

Temperature: 15 °C to 35 °C Relative humidity: 45 % to 75 %

Air pressure: 86 kPa to 106 kPa (860 mbar to 1060 mbar).

For testing the components are mounted on a test board in accordance with IEC 60115-1, 4.31 unless otherwise specified.

In the Test Procedures and Requirements table only the tests and requirements are listed with reference to the relevant clauses of IEC 60115-1 and IEC 60068-2-xx test methods. A short description of the test procedure is also given.

TEST P	TEST PROCEDURES AND REQUIREMENTS				
IEC 60115-1 CLAUSE	IEC 60068-2-xx TEST METHOD	TEST	PROCEDURE	REQUIREMENTS PERMISSIBLE CHANGE (△R)	
			Stability for product types:		
			CBB 0207	10 Ω to 1.5 M Ω	
4.5	-	Resistance		± 2 %	
4.8	-	Temperature coefficient	At (20/LCT/20) °C and (20/UCT/20) °C	-	
4.25.1	-	Endurance at 70 °C: standard operation mode	$U = \sqrt{P_{70} \times R}$ or $U = U_{\text{max}}$; 1.5 h ON; 0.5 h OFF 70 °C; 1000 h 70 °C; 8000 h	± (2 % R + 0.05 Ω) ± (4 % R + 0.05 Ω)	
4.25.1	-	Endurance at 70 °C: long term operation mode	$U = \sqrt{P_{70} \times R}$ or $U = U_{\text{max.}}$; 1.5 h ON; 0.5 h OFF 70 °C; 1000 h 70 °C; 8000 h	± (1 % R + 0.05 Ω) ± (2 % R + 0.05 Ω)	
4.25.3	-	Endurance at upper category temperature	125 °C; 1000 h 155 °C; 1000 h	\pm (2 % R + 0.05 Ω) \pm (4 % R + 0.1 Ω)	
4.24	78 (Cab)	Damp heat, steady state	(40 ± 2) °C; 56 days; (93 ± 3) % RH	± (1 % R + 0.1 Ω)

4.40	-	Electrostatic discharge (human body model)	IEC 61340-3-1; 3 pos. + 3 neg. 16 kV	± (0.5 % R + 0.05 Ω)

12NC INFORMATION FOR HISTORICAL CODING REFERENCE

- The resistors have a 12-digit numeric code starting with 2312.
- The subsequent 4 digits indicate the resistor type, specification and packaging; see the 12NC table.
- The remaining 4 digits indicate the resistance value:
 - The first 3 digits indicate the resistance value.
 - The last digit indicates the resistance decade in accordance with the 12NC Indicating Resistance Decade table.

Last Digit of 12NC Indicating Resistance Decade

RESISTANCE DECADE	LAST DIGIT
10 Ω to 99.9 Ω	9
100 Ω to 999 Ω	1
1 k Ω to 9.99 k Ω	2
10 kΩ to 99.9 kΩ	3
100 k Ω to 999 k Ω	4
1 M Ω to 9.99 M Ω	5

12NC Example

The 12NC of a CBB 0207 resistor, value 47 k Ω with \pm 2 % tolerance, supplied on bandolier in a box of 5000 units is: 2312 955 24703.

12NC - Resistor types and packaging				
DESCRIPTION 2312
