

Vishay Siliconix

0.4 Ω , Low Resistance and Capacitance, Dual DPDT / Quad SPDT Analog Switch

DESCRIPTION

The DG2523 and DG2524 are four-channel single-pole double-throw (SPDT) analog switches. The DG2523 has two control inputs that each controls a pair of single-pole double-throw (SPDT). It is also known as a two-channel double-pole double-throw (DPDT) configuration. The DG2524 has an $\overline{\text{EN}}$ pin to enable the device when the logic is low.

The parts are designed to operate from 1.8 V to 5.5 V single power rail. All switches conduct equally well in both directions, offering rail to rail signal witching and can be used both as multiplexers as well as de-multiplexers. The parts feature low control logic threshold. Break-before-make switching is guaranteed.

The DG2523 and DG2524 exhibit low parasitic capacitance, low leakage, and highly matched low and flat switch resistance over the full signal range characters that are important for precision analog designs.

The high bandwidth and excellent total harmonic distortion (THD) performance make them ideal for both analog and digital signal switching in space constrain applications requiring high performance and efficient use of board space.

The DG2523 and DG2524 come in Pb-free QFN-16 package of 3 mm x 3 mm.

BENEFITS

- · Low and flat resistance
- · Excellent total harmonic distortion
- · Low parasitic capacitance
- Low voltage control interface

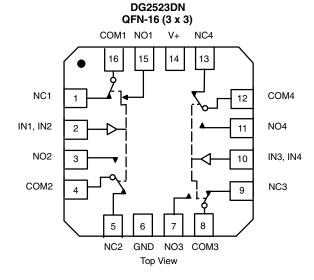

FEATURES

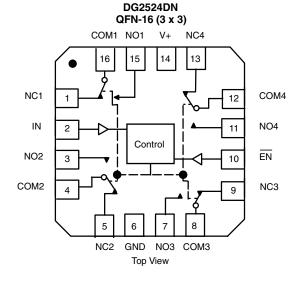

- 1.8 V to 5.5 V single supply operation
- Low resistance: 0.4 Ω / typ. at 2.7 V
- Highly flat and matched Ron
- Low parasitic capacitance,
 C_{on} = 26 pF, C_{off} = 14.5 pF
- Typical switch off leakage of 40 pA
- High bandwidth: 310 MHz
- Guaranteed logic high 1.2 V, logic low 0.3 V
- · Break before make switching
- Signal swing over V+ capable
- Power down protection
- Latch up current: 300 mA (JESD78)
- ESD/HBM: > 6 kV
- Material categorization: for definitions of compliance please see <u>www.vishay.com/doc?99912</u>

APPLICATIONS

- · Automatic test equipment
- Data acquisition systems
- Meters and instruments
- Medical and healthcare systems
- · Communication systems
- · Audio and video signal routing
- Battery powered systems
- Computer peripherals
- Data storage
- Relay replacement

ABSOLUTE MAXIMUM RATINGS (T _A = 25 °C, unless otherwise noted)									
PARAMETER	SYMBOL	LIMIT	UNIT						
Deference to CND	V+		-0.3 to +6	V					
Reference to GND	IN, COM, NC, NO a		-0.3 to (V+ + 0.3)						
Current (any terminal except NO, NC, or	COM)		30						
Continuous current (NO, NC, or COM)		± 300	mA						
Peak current (pulsed at 1 ms, 10 % duty		± 500							
Storage temperature (D suffix)		-65 to +150	°C						
Package solder reflow conditions ^d	QFN-16		250						
Power dissipation (packages) ^b	QFN-16 °		1385	mW					

Notes

- a. Signals on NC, NO, or COM, or IN exceeding V+ will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
- b. All leads welded or soldered to PC board.
- c. Derate 17.3 mW/°C above 70 °C.
- d. Manual soldering with iron is not recommended for leadless components. The miniQFN-16 is a leadless package. The end of the lead terminal is exposed copper (not plated) as a result of the singulation process in manufacturing. A solder fillet at the exposed copper lip cannot be guaranteed and is not required to ensure adequate bottom side solder interconnection.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Notes

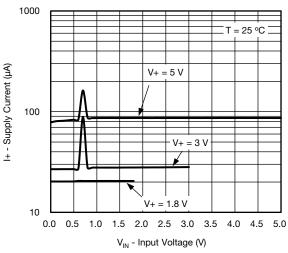

- a. Room = 25 $^{\circ}$ C, full = as determined by the operating suffix.
- b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
- c. Typical values are for design aid only, not guaranteed nor subject to production testing.
- d. Guarantee by design, not subjected to production test.
- e. V_{IN} = input voltage to perform proper function.
- f. Crosstalk measured between channels.

QFN-16 Lead (3 x 3)

Notes

- (1) All dimensions are in millimeters.
- (2) N is the total number of terminals.
- (3) Dimension b applies to metallized terminal and is measured between 0.25 and 0.30 mm from terminal tip.
- (4) Coplanarity applies to the exposed heat sink slug as well as the terminal.
- (5) The pin #1 identifier may be either a mold or marked feature, it must be located within the zone indicated.
