## $0.35-\Omega$ Low-Voltage Dual SPDT Analog Switch

## DESCRIPTION

The DG2535/DG2536 is a sub $1 \Omega(0.35 \Omega$ at 2.7 V$)$ dual SPDT analog switches designed for low voltage applications. The DG2535/DG2536 has on-resistance matching (less than $0.05 \Omega$ at 2.7 V ) and flatness (less than $0.2 \Omega$ at 2.7 V ) that are guaranteed over the entire voltage range. Additionally, low logic thresholds make the DG2535/DG2536 an ideal interface to low voltage DSP control signals.
The DG2535/DG2536 has fast switching speed with break-before-make guaranteed. In the On condition, all switching elements conduct equally in both directions. Off-isolation and crosstalk is -69 dB at 100 kHz .
The DG2535/DG2536 is built on Vishay Siliconix's high-density low voltage CMOS process. An eptiaxial layer is built in to prevent latchup. The DG2535/DG2536 contains the additional benefit of $2,000 \mathrm{~V}$ ESD protection.
In space saving MSOP-10 and DFN-10 lead (Pb)-free packages, the DG2535/DG2536 are high performance, low $r_{\text {ON }}$ switches for battery powered applications. No lead (Pb) is used in the manufacturing process either inside the device/ package or on the external terminations. As a committed partner to the community and the environment, Vishay Siliconix manufactures this product with the lead (Pb)-free device terminations. For analog switching products manufactured in DFN packages, the lead (Pb)-free "-E3/E4" suffix is being used as a designator. Lead (Pb)-free DFN products purchased at any time will have either a nickel-palladium-gold device termination or a $100 \%$ matte tin device termination. The different lead ( Pb )-free materials are interchangeable and meet all JEDEC standards for reflow and MSL rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
