## $0.45 \Omega$, Low Voltage Dual SPDT Analog Switch with Negative Swing Audio Capability

## DESCRIPTION

The DG2750 is a dual SPDT low on-resistance switch designed to from a single 1.6 V to 5.5 V power supply. It is a bi-directional switch, and is capable of switching negative swing audio without the need for a coupling capacitor. With a single power supply, the audio signal can swing over the range from ((V+)-5) to $\mathrm{V}+$.
Guaranteed to operate with 1.4 V logic when $\mathrm{V}+$ is in the range of 2.7 V to 5.5 V , the DG 2750 will allow an easy interface with low voltage DSP or ASIC control logic.
The DG2750 is built on sub micron CMOS low voltage process technology, has very low quiescent current, and provides greater than 600 mA latch-up protection, as tested per JESD78.
The DG2750 is assembled in compact mQFN10, $1.4 \mathrm{~mm} \times 1.8 \mathrm{~mm} \times 0.55 \mathrm{~mm}$ and ultra thin UTMQFN of 0.35 mm thickness.

As a committed partner to the community and the environment, Vishay Siliconix manufactures this product with lead (Pb)-free device termination. The miniQFN-10 package has a nickel-palladium-gold device termination and is represented by the lead ( Pb )-free "-E4" suffix to the ordering part number. The nickel-palladium-gold device terminations meet all JEDEC ${ }^{\circledR}$ standards for reflow and MSL rating.
As a further sign of Vishay Siliconix's commitment, the DG2750 is fully RoHS-complaint and halogen-free.

## FEATURES

- 1.6 V to 5.5 V single power rail operation
- Capable to switch negative swing audio without DC blocking capacitor
- Low signal distortion: THD+N <-98 dB
- Low on-resistance
- 1.4 V high logic
- Latch-up current > 600 mA (JESD78)
- ESD (HBM): 8 kV
- Reduced power consumption
- Reduce board space
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

## APPLICATIONS

- Cellular phones
- Portable media players
- Computer and game machine
- Handheld healthcare and instruments

## Notes

a. Room $=25^{\circ} \mathrm{C}$, Full $=$ as determined by the operating suffix
b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet
c. Typical values are for design aid only, not guaranteed nor subject to production testing
d. Guarantee by design, not subjected to production test
e. $\mathrm{V}_{\mathrm{IN}}=\mathrm{V}+$ voltage to perform proper function
f. Crosstalk measured between channels

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
