Bulk Metal® Foil Technology
RNC90Y and RNC90Z (Z-Foil) to MIL-PRF-55182/9

INTRODUCTION

Military Established Reliability resistors from Vishay Foil Resistors are available in resistance values from 4.99 Ω through 121 kΩ and for tolerances from ± 0.005 % to ± 1.0 %. The same resistors are also available as a non-qualified product for customers desiring higher or lower resistance values and the same or better performance capabilities. (See table 2) Both the qualified and the non-qualified version are manufactured on the same production line facilities and are subjected to the same process, lot control, conditioning, and GRP A (100 %) screening. Qualified versions receive additional MIL Group B and C testing.

FEATURES

- QPL product with established reliability (ER): meets requirements of MIL-PRF-55182/9
- Load life stability: ± 0.005 % for 2000 h, 0.3 W at + 125 °C
- Temperature coefficient of resistance (TCR): ± 2 ppm/°C max. (- 55 °C to + 175 °C)
- Resistance tolerance: to ± 0.005 %
- Thermal EMF: < 0.1 µV/°C
- Qualified resistance range: 4.99 Ω to 121 kΩ (RNC90Y)
30.1 Ω to 121 kΩ (RNC90Z)
- Specially conditioned non-QPL resistors available
See data sheet “Improved Performance Tested”
- Fast thermal stabilization
- Rise time: 1 ns without ringing
- Special coatings that provide a cushioning layer which isolates the resistive element from external stresses and moisture
- Electrostatic discharge (ESD) above 25 000 V
- Non inductive, non capacitive design
- Current noise < - 42 dB
- Prototype sample available from 72 h

Notes

1. Qualification and failure rate verification test data is maintained by Vishay Foil and is available upon request. Lot traceability and identification data is maintained by Vishay Foil for 7 years.
2. Load life ΔR Maximum can be reduced by 80 % through Enhanced Reliability Testing (ERT). Consult our Applications Engineering for details.
3. Inductance (L) due mainly to the leads.
4. Not to exceed power rating of resistor.
5. µV/°C relates to EMF due to lead temperature differences and µV/W due to power applied to the resistor.
6. 0.200" (5.08 mm) lead spacing available - specify RNC90T for RNC90Y, and RNC90S for RNC90Z.

The response of military and non military grade resistors to environmental stresses can be made better by "Improved Performance Testing" (IPT). The IPT part will see burn-in and cycling that removes the "knee" from the normal drift of non IPT parts. (See Table 4 for the improvement to expect in military parts when calling for VFR recommended screening). Users should be aware that IPT testing renders the part non QPL and so a 3XXXXX part number will be assigned by VFR. Consult Applications Engineering for details and ordering advice.
