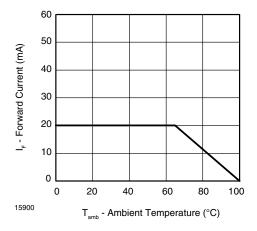

Fig. 1 - Forward Current vs. Ambient Temperature

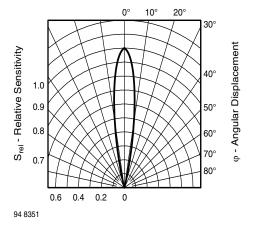

Fig. 2 - Relative Radiant Sensitivity vs. Angular Displacement

Luminous intensity is tested at a current pulse duration of 25 ms and an accuracy of ± 11 %.

The above type numbers represent the order groups which include only a few brightness groups. Only one group will be shipped on each bag (there will be no mixing of two groups on each bag).

In order to ensure availability, single brightness groups will not be orderable.

In a similar manner for colors where wavelength groups are measured and binned, single wavelength groups will be shipped in any one bag. In order to ensure availability, single wavelength groups will not be orderable
