### 2.5 A Output Current IGBT and MOSFET Driver

## DESCRIPTION

The VO3120 consists of a LED optically coupled to an integrated circuit with a power output stage. This optocoupler is ideally suited for driving power IGBTs and MOSFETs used in motor control inverter applications. The high operating voltage range of the output stage provides the drive voltages required by gate controlled devices. The voltage and current supplied by this optocoupler makes it ideally suited for directly driving IGBTs with ratings up to 800 V/50 A. For IGBTs with higher ratings, the VO3120 can be used to drive a discrete power stage which drives the IGBT gate.

## FEATURES

- 2.5 A minimum peak output current
- $25 \mathrm{kV} / \mu \mathrm{s}$ minimum common mode rejection (CMR) at $\mathrm{V}_{\mathrm{CM}}=1500 \mathrm{~V}$
- $I_{C C}=2.5 \mathrm{~mA}$ maximum supply current
- Under voltage lock-out (UVLO) with hysteresis
- Wide operating $\mathrm{V}_{\mathrm{CC}}$ range: 15 V to 32 V
- $0.2 \mu \mathrm{~s}$ maximum pulse width distortion
- Industrial temperature range: $-40^{\circ} \mathrm{C}$ to $110^{\circ} \mathrm{C}$
- 0.5 V maximum low level output voltage ( $\mathrm{V}_{\mathrm{OL}}$ )
- Reinforced insulation rated per DIN EN 60747-5-2
- Material categorization: For definitions of compliance please see www.vishay.com/doc?99912

## APPLICATIONS

- Isolated IGBT/MOSFET gate driver
- AC and brushless DC motor drives
- Induction stove top
- Industrial inverters
- Switch mode power supplies (SMPS)
- Uninterruptible power supplies (UPS)

## AGENCY APPROVALS

- UL - file no. E52744 system code H, double protection
- cUL - file no. E52744, equivalent to CSA bulletin 5A
- DIN EN 60747-5-2 (VDE 0884) and reinforced insulation rating available with option 1

## Notes

- Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute maximum ratings for extended periods of the time can adversely affect reliability.
${ }^{(1)}$ Maximum pulse width $=10 \mu \mathrm{~s}$, maximum duty cycle $=0.2 \%$. This value is intended to allow for component tolerances for designs with $\mathrm{I}_{\mathrm{O}}$ peak minimum $=2.5 \mathrm{~A}$. See applications section for additional details on limiting $\mathrm{I}_{\mathrm{OH}}$ peak.
(2) Refer to reflow profile for soldering conditions for surface mounted devices (SMD). Refer to wave profile for soldering conditions for through hole devices (DIP).

## Note

- The thermal characteristics table above were measured at $25^{\circ} \mathrm{C}$ and the thermal model is represented in the thermal network below. Each resistance value given in this model can be used to calculate the temperatures at each node for a given operating condition. The thermal resistance from board to ambient will be dependent on the type of PCB, layout and thickness of copper traces. For a detailed explanation of the thermal model, please reference Vishay's Thermal Characteristics of Optocouplers application note.

## ELECTRICAL CHARACTERISTICS

| PARAMETER | TEST CONDITION | SYMBOL | MIN. | TYP. | MAX. | UNIT |

| UVLO threshold | $\mathrm{V}_{\mathrm{O}} \geq 5 \mathrm{~V}$ | V UVLO + | 11 |  | 13.5 | V |
|  | $\mathrm{I}_{\mathrm{F}}=10 \mathrm{~mA}$ | V UVLO - | 9.5 |  | 12 | V |
| UVLO hysteresis |  | UVLO ${ }_{\text {HYS }}$ |  | 1.6 |  | V |

## Notes

- Minimum and maximum values were tested over recommended operating conditions $\left(T_{A}=-40^{\circ} \mathrm{C}\right.$ to $110{ }^{\circ} \mathrm{C}, \mathrm{I}_{\mathrm{F}(\mathrm{ON})}=7 \mathrm{~mA}$ to 16 mA , $\mathrm{V}_{\mathrm{F}(\text { (OFF) }}=-3 \mathrm{~V}$ to $0.8 \mathrm{~V}, \mathrm{~V}_{\mathrm{CC}}=15 \mathrm{~V}$ to $32 \mathrm{~V}, \mathrm{~V}_{\mathrm{EE}}=$ ground) unless otherwise specified. Typical values are characteristics of the device and are the result of engineering evaluations. Typical values are for information only and are not part of the testing requirements. All typical values were measured at $\mathrm{T}_{\mathrm{amb}}=25^{\circ} \mathrm{C}$ and with $\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{EE}}=32 \mathrm{~V}$.
${ }^{(1)}$ Maximum pulse width $=50 \mu \mathrm{~s}$, maximum duty cycle $=0.5 \%$.
(2) Maximum pulse width $=10 \mu \mathrm{~s}$, maximum duty cycle $=0.2 \%$. This value is intended to allow for component tolerances for designs with $I_{0}$ peak minimum $=2.5 \mathrm{~A}$.
${ }^{(3)}$ In this test $\mathrm{V}_{\mathrm{OH}}$ is measured with a dc load current. When driving capacitive loads $\mathrm{V}_{\mathrm{OH}}$ will approach $\mathrm{V}_{\mathrm{CC}}$ as $\mathrm{I}_{\mathrm{OH}}$ approaches zero A . Maximum pulse width $=1 \mathrm{~ms}$, maximum duty cycle $=20 \%$.

## Notes

(1) Pins 1 and 4 need to be connected to LED common.
(2) Common mode transient immunity in the high state is the maximum tolerable $\left|\mathrm{dV}_{\mathrm{CM}} / \mathrm{dt}\right|$ of the common mode pulse, $\mathrm{V}_{\mathrm{CM}}$, to assure that the output will remain in the high state (i.e., $\mathrm{V}_{\mathrm{O}}>15 \mathrm{~V}$ ).
(3) Common mode transient immunity in a low state is the maximum tolerable $\left|\mathrm{d} V_{\mathrm{CM}} / \mathrm{dt}\right|$ of the common mode pulse, $\mathrm{V}_{\mathrm{CM}}$, to assure that the output will remain in a low state (i.e., $\mathrm{V}_{\mathrm{O}}<1 \mathrm{~V}$ ).

## Note

- As per IEC 60747-5-2, §7.4.3.8.1, this optocoupler is reinforced rated and suitable for "safe electrical insulation" only within the safety ratings. Compliance with the safety ratings shall be ensured by means of protective circuits.
