Increase the power dissipation level of D²PAK, TO-220, SOL-20 and other surface mount power components while maintaining the benefits of high-speed, automated pick and place assembly technology. The patented 216 Series heat sink is mounted astride the component and solder reflowed to the PCB using standard board assembly equipment (Fuji, Philips, etc.) and processes. This creates a very low thermal resistance path from the component tab to the heat sink and in turn to the ambient air which lowers junction temperatures for reliable operation. Available in bulk, tube or tape & reel packaging which meet EIA Standards and ESD protection requirements. Material: Copper, tin-lead plated.

Compact, slim, labor-saving heat sinks with integral self locking features for TO-220 semiconductors. Their unique design (patent pending) ensures uniform force applied to the component for effective and maximum thermal contact in horizontal or vertical mounting positions while eliminating the need for fastening hardware. A mounting hole is available for hardware mounting when desired. The 230 and 234 Series can be used interchangeably. The 234 Series has standoffs on the base of the heat sink. Specify solderable tab options by the addition of suffix 01, 05, or 10 to the standard part number (i.e. 230-75AB-01). Material: Aluminum, black anodized.

Unique stress-free labor-saving locking-tab design ensures reliable device-to-heat-sink surface contact for TO-220 components. The 235 Series maximizes surface area providing more effective cooling of components mounted either horizontally or vertically. Components insert quickly and easily without the use of installation tools by depressing heat sink sides, reducing process time and assembly costs. A mounting hole is available for hardware mounting when desired. Models are available with or without solderable tab options. Specify solderable tab options by the addition of suffix 01, 05, or 10 to the standard part number (i.e. 235-85AB-01). Material: Aluminum, black anodized.

Rapid component alignment and installation of TO-220 components is achieved with the 243 Series Clip-On design while ensuring reliable device-to-heat-sink surface contact for maximum thermal efficiency. Components insert quickly and easily without the use of installation tools, reducing process time and assembly costs. Material: Aluminum, pre-anodized black.

Snap-down heat sinks for TO-220 devices mounted either vertically or horizontally. Integral self-locking-fin features eliminate the need for installation tools or other hardware typically required for installation or removal of components. A hole is available for hardware mounting when desired. Unique fin design aligns the component and securely retains it when "Snapped" into the heat sink for reliable component operation. Specify solderable tab options by the addition of suffix 03 or 04 to the standard part number (i.e. 239-75AB-03). Material: Aluminum, black anodized.

This low-cost, low-profile wavesolderable heat sink occupies minimum space and is ideal for use with many low-power semiconductors in a variety of applications. The heat sink can be mounted vertically or horizontally on printed circuit boards. Specify solderable tab options by the addition of suffix 01 or 02 to the standard part number (i.e. 273-AB-01). Material: Aluminum, black anodized.

Similar to the 273 Series, the 274 Series has a narrower footprint width for use on densely populated circuit boards. Use these types when space is at a premium and low cost is needed. Specify solderable tab options by the addition of suffix 01 or 02 to the standard part number (i.e. 274-1AB-01). Material: Aluminum, black anodized.

Twisted fin design for efficient cooling of vertically mounted TO-220 devices occupies minimum board space. Heat sinks are available with a mounting hole or mounting slot and optional labor-saving clip attachments. Order SpeedClips™ 285SC or 330SC separately for rapid component installation, lowering manufacturing costs. Standard solderable tab option is specified by the addition of suffix 22 to the standard part number (i.e. 240-118ABH-22 or 240-118ABS-22). Material: Aluminum, black anodized.

Efficient, low-profile twisted fin heat sinks for vertical mounting of TO-220 devices. Its slim design minimizes PC board space occupied and the alternating twisted fins increase air turbulence for improved cooling. Standard models include wavesolderable tinned tabs for direct PC board mounting. Specify part number 242-125AB-22. Material: Aluminum, black anodized.

Lightweight, slim-profile heat sinks with integral self-locking clips occupy minimum board real estate and reduce assembly costs. Their small footprint is ideal for a variety of low-power multiwatt component applications. Models are available in heights of .620 in. (15.7) and .845 in. (21.5). Specify solderable tab option for the 251-80AB (only) by the addition of suffix 19 to the standard part number (i.e. 251-80AB-19). Material: Aluminum, black anodized.

Slim profile heat sinks with integral self-locking clips occupy minimum board real estate and reduce assembly costs. Their integral locking features eliminate mounting hardware typically needed for component installation and removal yet provide rapid and secure device-to-heat-sink surface contact and retention. The 250 Series is ideal for a variety of high-power dissipation Multiwatt component applications. Specify solderable tab options by the addition of suffix 09 or 25 to the standard part number (i.e. 250-122AB-09 or 250-122AB-25). Material: Aluminum, black anodized.

High-performance heat sinks for TO-220 devices mounted vertically. Three bottom fins of the 237 series are recessed to allow closer component mounting. Models are available with two twist and three twist mount tabs or two solderable tabs. Specify solderable tab options by the addition of suffix 24 to the standard part number (i.e. 237-167AB-24 or 252-167AB-24). Order SpeedClips™ 285SC or 330SC separately for rapid component installation, lowering manufacturing costs. Material: Aluminum, black anodized.

Wave-solderable pins on 1 in. (25.4) centers for vertical mounting. Maximum semiconductor package width is .660 in. (16.8). Models have .125 in. (3.2) "Notch" for PC board traces below the heat sink base and a mounting hole positioned for either TO-218 or TO-220 components. Thermal accessory products including thermal compounds, adhesives, interface materials, and others are available.

Wave-solderable pins for secure PC board mounting for large plastic package power semiconductor packages and "Notch" for PC board traces below the heat sink base. Maximum heat sink thermal performance is achieved with the 657 Series. Accessory Products available include thermal interface materials and compounds to provide electrical isolation or reduced interface resistance. Material: aluminum, black anodized.
